| <p><b>Radiation Emission Test Setup (Below 30MHz)</b></p>   |  A photograph of a radiation emission test chamber. The interior walls are covered with white, square-shaped electromagnetic interference (EMI) absorbers. A yellow, rectangular test fixture is positioned on a circular turntable in the center of the chamber. A black metal frame is visible in the foreground, partially obscuring the turntable. The floor is a light-colored concrete.                              |
| <p><b>Radiation Emission Test Setup (30MHz to 1GHz)</b></p> |  A photograph of a radiation emission test chamber, similar to the one above. The interior walls are covered with white, square-shaped EMI absorbers. A yellow, rectangular test fixture is positioned on a circular turntable in the center of the chamber. In the foreground, a metal frame with several vertical rods is visible, likely used for mounting antennas or sensors. The floor is a light-colored concrete. |

|                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Radiation Emission Test Setup (1GHz to 18GHz)</b></p> |  A photograph of a radiation emission test setup for the 1GHz to 18GHz range. A white, cube-shaped test item is placed on a yellow wooden stand in the center of an anechoic chamber. The chamber walls are covered with white, square-shaped pyramidal absorbers. The floor is covered with blue, conical absorbers. A red probe is visible on the right side of the chamber, pointing towards the test item.              |
| <p><b>Radiation Emission Test Setup (Above 18GHz)</b></p>   |  A photograph of a radiation emission test setup for frequencies above 18GHz. The same white, cube-shaped test item is placed on the same yellow wooden stand in the center of the anechoic chamber. The chamber walls are covered with white, square-shaped pyramidal absorbers. The floor is covered with blue, conical absorbers. A blue cable is visible on the right side of the chamber, connected to the test item. |
