

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a piece of electronic equipment (likely a spectrum analyzer or noise meter) sits on a wooden workbench. To its right, a power supply unit is connected to a power strip. On the right side of the workbench, a small electronic device is connected to a power source via a cable. The background is a plain wall.
Radiation Emission View (Below 30MHz)	 A photograph showing a radiation emission test setup. A large, rectangular metal frame is positioned around a test object, which is a small, light-colored, rectangular block. The frame is supported by a stand. The background consists of a wall covered in white, square-shaped absorbers, likely for electromagnetic interference (EMI) shielding. The floor is dark and reflective.
