CLEANING

WEARING

Choose the ear tips and ear wings that fit your ears best. The earbuds come with the M sizes of ear tips and ear wings pre-installed.

To better block out noises, insert the earbuds into your ear canals and turn gently until the ear wings are wedged against your ear ridges.

Note:

We provide two types of ear tips:

- **Silicone ear tips** (for optimal comfort)
- **Memory foam ear tips** (for enhanced noise blocking and feels slightly firmer)

Please choose the one that best suits your noise reduction needs and wearing comfort.

Memory foam ear tips are consumable items and should be replaced regularly. Do not clean them with alcohol, water, or other liquids.

CHARGING

1. Place the earbuds in the charging case and close it.
 - Fully dry off the earbuds and the USB charging port before charging.
2. Connect the charging case to the power supply by using the provided USB-C charging cable.
 - It is recommended that you charge the earbuds with a 5V charger (not included).
 - Fully charge both the earbuds and the charging case before the first use.

POWERING ON & PAIRING

After removing the insulation stickers on the earbuds, return the earbuds to the charging case, then activate Bluetooth pairing by closing and reopening the case lid. Subsequently, the earbuds will automatically power on and enter Bluetooth pairing mode. Select **soundcore Sleep A30** on your device's Bluetooth list to connect.

When pairing, the LED indicators inside the charging case will start flashing. After the pairing is successful, the LED indicators will stay on for 1 second and then flash slowly, until the case is closed.

Note: You can also enter pairing mode manually. Place the earbuds in the charging case and leave the case open. Press and hold the button on the back of the charging case for 3 seconds to enter pairing mode.

USING SLEEP A30 WITH THE APP

Switch Active Noise Cancellation On/Off

Active Noise Cancellation (ANC) eliminates the background noise from household appliances and outside traffic that affects sleep. Switch ANC on or off by double-tapping the right earbud, or toggle Active Noise Cancellation on or off in the app. Tap controls can also be customized via the app. You can hear a voice prompt when switching.

Note:

- When you set it to Play Local Audio through Sleep Onset Detected, ANC will automatically turn off.
- When you set it to Stop Audio through Sleep Onset Detected, ANC will remain in its bedtime setting, with the default set to stay on throughout the night.

Selecting a Listening Mode

The listening mode determines your audio source. You can switch between Bluetooth and Local mode by double-tapping the left earbud or choosing between Bluetooth and Local mode in the app. You can hear a voice prompt when switching listening modes.

- **Bluetooth Mode:** Play from your Audio Library or connect to other apps to stream your favorite audio content.
- **Local Mode:** Listen to the soothing sounds downloaded onto your earbuds, and enjoy your rest without interruptions from phone notifications. The default is Masking Soundscape.

Downloading Audio Files onto Earbuds

You can also transfer selected Snore Masking or White Noise audio to your earbuds for instant playback in Local mode.

How to Download Audio onto Earbuds:

1. Go to Audio Library on the home page.
2. Tap Masking Soundscape or White Noise.
3. Select your preferred sounds and tap the download icon.
4. Double confirm by tapping Transfer.
5. Wait for the download transfer to complete.

Supported Audio Types:

- Masking Soundscape
- White Noise

Sleep Audio Setting

Start Your Personalized Audio Journey with One Tap: From Bedtime to Sleep, and Waking Up

Bedtime: Choose your preferred audio for relaxation or noise masking before sleep. Options include Brainwave Audio, Snore-Masking soundscapes, or custom white noise.

Fall Sleep: Adjust your earbuds' playback settings after detecting that you are asleep through Sleep Onset Detection:

- **Stop Audio:** All audio will stop automatically. ANC will remain in its bedtime setting, with the default set to stay on throughout the night.
- **Play Local Audio:** Listen to the soothing sounds downloaded onto your earbuds. ANC will automatically turn off until the earbuds detect you have woken up.

You can also adjust playback settings after sleep in the Sleep Onset Detected section of the homepage.

Waking Up: Wake up to one of four specially designed alarms recommended by soundcore, and set a repeating schedule if needed.

Audio Library

In Audio Library, you can listen to brainwave audio, snore-masking soundscapes, or white noise mix for noise masking, sleep, or relaxation in Bluetooth mode.

- **AI Brainwave Audio (Stress Relief & Relaxation):** Based on principles of neuro musicology and psychoacoustics, this audio combines harmonious scales and intervals with binaural beats to naturally guide your brain into producing relaxing brainwave frequencies. It offers an unlimited "companion-style" music experience to help you sleep, relieve stress, and relax your mind and body.
- **Masking Soundscapes (Noise & Snore Masking):** Carefully curated combinations of rain, wind, water, and other steady, soothing sounds create a calm and stable sleep environment. These soundscapes effectively mask background noise, specifically reducing disruptions from sudden or repetitive snoring with real-time dynamic EQ adjustment.
- **White Noise (Personalized):** Choose from 62 white noise options and mix them to suit your needs. Create a personalized, calming soundscape to help you relax and focus in any setting.

Sleep Monitoring

Sleep Monitoring: The earbuds track your sleep, including stages and movements, delivering a detailed report on your sleep patterns.

Two Ways to Track Your Sleep:

- **Manual Tracking via app (Bluetooth Mode):** Tap Sleep With Audio on the homepage to track sleep. The sleep report will be shown after your sleep ends (with the sleep duration exceeding 30 minutes). In this way, we can accurately record your sleep onset latency.
- **Automatic Tracking via Earbuds (Bluetooth and Local Modes):** The earbuds use built-in sensors and algorithms to detect when you fall asleep and automatically track your sleep data.

How to View the Sleep Report:

- On My Devices homepage, tap View Sleep Report.

- On Sleep A30 page, tap Sleep Report.
- Even if the device is offline, you can access the sleep report in My Devices page.

CONTROLS

Note:

- Please note that you need to tap with a bit of force for the earbuds to recognize the command.
- You can customize more controls in the soundcore app.
- When using dual earbuds, if you modify UI, it will also be effective when using a single earbud. Vice versa.

POWERING OFF

To power off, place the earbuds in the charging case by aligning the charging contacts of both the earbuds and the charging case, and then close the lid.

Once the corresponding earbud is back into the case, the LED indicators inside the charging case will become brighter and start flashing slowly, until the case is closed.

RESET

Reset if the earbuds have issues pairing with each other or with other devices.

Delete the pairing history from your Bluetooth device first. Place the earbuds in the charging case and leave the case open. Press and hold the button on the back of the charging case for 10 seconds, until the LED indicators inside the case turn off for 3 seconds.

LED LIGHT GUIDE

	Flashing white rapidly		Steady white
	Flashing white slowly		Light off

FIRMWARE UPDATE

You will be informed once the new version of firmware is detected when you connect the earbuds to the app. Ensure the earbuds are placed in the charging case and the case remains open until the firmware update is completed. During the update, ensure the earbuds are being charged and avoid any usage.

CLEANING

Dust, earwax, or other debris can accumulate in the earbuds. To maintain optimal sound quality, regularly clean your earbuds by using a cotton swab slightly moistened with rubbing alcohol to gently wipe the metal mesh filter under the rubber ear tips.
