

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a piece of electronic equipment (likely a spectrum analyzer or noise meter) sits on a wooden workbench. A red cable is connected to it. To the right, another wooden workbench holds a small white electronic device. Below the workbenches, a power supply unit is visible on the floor, with various cables connected to it. The background shows a plain wall with some electrical outlets.
Radiation Emission Test View (30MHz to 1GHz)	 A photograph showing a radiation emission test setup. A white, rectangular test chamber or shielded enclosure is positioned in the center of a room. The walls of the room are covered with white, square-shaped absorbers, likely for electromagnetic interference (EMI) shielding. To the right of the chamber, there is a metal structure with several vertical rods, possibly part of a measurement system. The floor is a polished, reflective surface.
