

# **FCC TEST REPORT**

**FCC ID: 2AP2N-SILIPAD**

On Behalf of

**Shenzhen Esorun Technology Co., LTD**

**3 Coils Wireless Charger**

**Model No.: Sili Pad II, Sili Pad III**

Prepared for : Shenzhen Esorun Technology Co., LTD  
Address : 425(E02), No. 5 Golf Avenue, Guangpei Community, Guanlan  
Street, Longhua District, Shenzhen, China

Prepared By : Shenzhen Alpha Product Testing Co., Ltd.  
Address : Building i, No.2, Lixin Road, Fuyong Street, Bao'an District,  
518103, Shenzhen, Guangdong, China

Report Number : A1910202-C01-R04  
Date of Receipt : October 29, 2019  
Date of Test : August 20, 2020-September 2, 2020  
Date of Report : September 2, 2020  
Version Number : V0

## TEST REPORT DECLARATION

Applicant : Shenzhen Esorun Technology Co., LTD  
Address : 425(E02), No. 5 Golf Avenue, Guangpei Community, Guanlan  
Street, Longhua District, Shenzhen, China  
Manufacturer : Shenzhen Esorun Technology Co., LTD  
Address : 425(E02), No. 5 Golf Avenue, Guangpei Community, Guanlan  
Street, Longhua District, Shenzhen, China  
EUT  
Description : 3 Coils Wireless Charger  
(A) Model No. : Sili Pad II, Sili Pad III  
(B) Trademark : ESORUN

Measurement Standard Used:

### **FCC CFR Title 47 Part 15 Subpart C Section 15.209**

The device described above is tested by Shenzhen Alpha Product Testing Co., Ltd. to determine the maximum emission levels emanating from the device and the severe levels of the device can endure and its performance criterion. The test results are contained in this test report and Shenzhen Alpha Product Testing Co., Ltd. is assumed full responsibility for the accuracy and completeness of test. Also, this report shows that the EUT is technically compliant with the FCC CFR Title 47 Part 15 Subpart C Section 15.209 requirements.

This report applies to above tested sample only. This report shall not be reproduced in parts without written approval of Shenzhen Alpha Product Testing Co., Ltd.

Tested by (name + signature).....: Lucas Pang  
Project Engineer

Approved by (name + signature).....: Simple Guan  
Project Manager

Date of issue.....: September 2, 2020

**Revision History**

| Revision | Issue Date        | Revisions              | Revised By  |
|----------|-------------------|------------------------|-------------|
| V0       | September 2, 2020 | Initial released Issue | Simple Guan |

## 1. Test Result Summary

| Requirement                      | CFR 47 Section | Result |
|----------------------------------|----------------|--------|
| Antenna requirement              | §15.203        | PASS   |
| AC Power Line Conducted Emission | §15.207        | PASS   |
| Spurious Emission                | §15.209(a)(f)  | PASS   |
| Occupied Bandwidth               | §15.215 (c)    | PASS   |

**Note:**

1. PASS: Test item meets the requirement.
2. Fail: Test item does not meet the requirement.
3. N/A: Test case does not apply to the test object.
4. The test result judgment is decided by the limit of test standard.

## 2. General Information

### 2.1. Description of Device (EUT)

|                      |   |                                                                                                                                 |
|----------------------|---|---------------------------------------------------------------------------------------------------------------------------------|
| EUT Name             | : | 3 Coils Wireless Charger                                                                                                        |
| Model No.            | : | Sili Pad II, Sili Pad III                                                                                                       |
| DIFF.                | : | There is no difference between the models except the appearance color. So all the test were performed on the model Sili Pad II. |
| Trademark            | : | ESORUN                                                                                                                          |
| Power supply         | : | USB Type-C Input: 12V/1.67A, 9V/2A, 9V/1.34A, 5V/2A<br>Wireless Output: 15W, 10W, 7.5W, 5W                                      |
| Operation frequency  | : | 125-205KHz                                                                                                                      |
| Modulation           | : | MSK                                                                                                                             |
| Antenna Type         | : | Coil Antenna, Maximum Gain is 4dBi(This value is supplied by applicant).                                                        |
| Connector cable loss | : | 0.5dB (This value is supplied by applicant).                                                                                    |

## 2.4. Block Diagram of connection between EUT and simulators

## 2.5. Description of Test Modes

| Channel | Frequency (KHz) | Channel | Frequency (KHz) | Channel | Frequency (KHz) | Channel | Frequency (KHz) |
|---------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|
| 1       | 125             | 6       | 150             | 11      | 175             | 16      | 200             |
| 2       | 130             | 7       | 155             | 12      | 180             | 17      | 205             |
| 3       | 135             | 8       | 160             | 13      | 185             | 18      |                 |
| 4       | 140             | 9       | 165             | 14      | 190             | 19      |                 |
| 5       | 145             | 10      | 170             | 15      | 195             | 20      |                 |

*Note: Pre-San all output power mode, and only worst data listed in report.*

## 2.6. Test Conditions

| Items              | Required  | Actual |
|--------------------|-----------|--------|
| Temperature range: | 15-35°C   | 26°C   |
| Humidity range:    | 25-75%    | 54%    |
| Pressure range:    | 86-106kPa | 980kPa |

## 2.7. Test Facility

Shenzhen Alpha Product Testing Co., Ltd

Building i, No.2, Lixin Road, Fuyong Street, Bao'an District, 518103, Shenzhen, Guangdong, China

June 21, 2018 File on Federal Communication Commission

Registration Number: 293961

September 15, 2019 Certificated by IC

Registration Number: CN0085

## 2.8. Measurement Uncertainty

(95% confidence levels, k=2)

| Item                                                                     | MU                   | Remark      |
|--------------------------------------------------------------------------|----------------------|-------------|
| Uncertainty for Conducted Emission Test                                  | 2.74dB               |             |
| Uncertainty for Radiation Emission test in 3m chamber<br>(below 30MHz)   | 2.13 dB              | Polarize: V |
|                                                                          | 2.57dB               | Polarize: H |
| Uncertainty for Radiation Emission test in 3m chamber<br>(30MHz to 1GHz) | 3.77dB               | Polarize: V |
|                                                                          | 3.80dB               | Polarize: H |
| Uncertainty for Radiation Emission test in 3m chamber<br>(1GHz to 25GHz) | 4.13dB               | Polarize: H |
|                                                                          | 4.16dB               | Polarize: V |
| Uncertainty for radio frequency                                          | $5.4 \times 10^{-8}$ |             |
| Uncertainty for conducted RF Power                                       | 0.37dB               |             |

## 2.9. Test Equipment List

| Equipment                   | Manufacture    | Model No.            | Serial No.                 | Last cal.  | Cal Interval |

| Test Procedure:       | <div><div>1. The E.U.T is connected to an adapter through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment.</div><div>2. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs).</div><div>3. Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.</div></div> |                       |              |  |            |         |          |           |           |       |    |    |      |    |    |

30MHz to 1GHz

Above 1GHz

**Test Procedure:**

1. For the radiated emission test below 1GHz:  
The EUT was placed on a turntable with 0.8 meter above ground. The EUT was set 3 meters from the interference receiving antenna, which was mounted on the top of a variable height antenna tower. The EUT was arranged to its worst case and then tune the antenna tower (from 1 m to 4 m) and turntable (from 0 degree to 360 degrees) to find the maximum reading. A pre-amp and a high PASS filter are used for the test in order to get better signal level.  
For the radiated emission test above 1GHz:  
Place the measurement antenna on a turntable with 1.5 meter above ground, which is away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | <p>maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.</p> <p>2. Corrected Reading: Antenna Factor + Cable Loss + Read Level - Preamp Factor = Level</p> <p>3. For measurement below 1GHz, If the emission level of the EUT measured by the peak detector is 3 dB lower than the applicable limit, the peak emission level will be reported. Otherwise, the emission measurement will be repeated using the quasi-peak detector and reported.</p> <p>4. Use the following spectrum analyzer settings:</p> <p>(1) Span shall wide enough to fully capture the emission being measured;</p> <p>(2) Set RBW=100 kHz for <math>f &lt; 1</math> GHz; VBW <math>\geq</math> RBW; Sweep = auto; Detector function = peak; Trace = max hold;</p> <p>(3) Set RBW = 1 MHz, VBW= 3MHz for <math>f \geq 1</math> GHz for peak measurement.</p> <p>For average measurement: VBW = 10 Hz, when duty cycle is no less than 98 percent. VBW <math>\geq 1/T</math>, when duty cycle is less than 98 percent where T is the minimum transmission duration over which the transmitter is on and is transmitting at its maximum power control level for the tested mode of operation.</p> |
| <b>Test mode:</b>    | Refer to section 4.1 for details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Test Method:</b>      | ANSI C63.10: 2013                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Limit:</b>            | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Test Procedure:</b>   | <ol style="list-style-type: none"> <li>1. According to the follow Test-setup, keep the relative position between the artificial antenna and the EUT.</li> <li>2. Set to the maximum power setting and enable the EUT transmit continuously.</li> <li>3. Use the following spectrum analyzer settings for 20dB Bandwidth measurement.<br/>Span = approximately 2 to 3 times the 20 dB bandwidth, centered on a hopping channel; <math>RBW \geq 1\%</math> of the 20 dB bandwidth; <math>VBW \geq RBW</math>; Sweep = auto; Detector function = peak; Trace = max hold.</li> <li>4. Measure and record the results in the test report.</li> </ol> |
| <b>Test setup:</b>       |  <p>The diagram illustrates the test setup. On the left is a green Spectrum Analyzer with a blue screen and two red dots representing ports. A black cable connects it to a small white rectangular block, which is then connected to a yellow rectangular block labeled 'EUT' (Equipment Under Test) with a single black dot representing a port.</p>                                                                                                                                                                                                       |
| <b>Test Mode:</b>        | Refer to section 4.1 for details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Test results:</b>     | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

### 3.3.2. Test data

| Frequency(KHz) | 20dB Occupy Bandwidth (kHz) | Limit (kHz) | Conclusion |
|----------------|-----------------------------|-------------|------------|
| 175.0          | 27.15                       | ---         | PASS       |

Test plots as follows:

Mid channel

Note: The Bandwidth of the three coil antennas is exactly the same.

## 4. Photos of test setup

### Radiated Emission

## Conducted Emission

## 5. Photographs of EUT
