

RF Exposure

Test Requirement: FCC 47CFR 15.247(i)
Test Date: 2018-05-02
Mode of Operation: On mode

Test Method:

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines.

According to KDB447498 D01 General RF Exposure Guidance v06, unless specifically required by the published RF exposure KDB procedures, standalone 1-g head or body and 10-g extremity SAR evaluation for general population exposure conditions, by measurement or numerical simulation, is not required when the corresponding SAR Exclusion Threshold condition.

RF Exposure Evaluation

The Maximum tune-up power = 9.51dBm (8.93mW)

SAR Test Exclusion Thresholds= $2.79 \leq 3.0$ for 1-g SAR,

The test separation distances is ≤ 5 mm

The power tune up tolerance is 7.81 ± 1.70 dBm

Max. duty factor is 100%
