1. overview

1.1 Scope

CE-2187B Product antenna technical requirements and material requirements specification.

CE-2187B Antenna selection, testing and acceptance.

1.2 Project basic information

Type :	<u>FPC Antenna</u>
Frequency :	BT: 2402~2484MHz
Material :	LDS

2. Technical specification requirement

2.1 Test items and equipment introduction

List	Items	Equipment
Active test	TRP, TIS	Comprehensive tester, OTA chamber

2.2 Active report

2.2.1 test specification

Test tools: Agilent8960 integrated measuring instrument, R&SCMW500, all-wave far-field ETS darkroom, high-precision positioning system and its controller and computer with automatic test program

Test environment: Temperature $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$, humidity $50\% \pm 15\%$

Test method: The DUT is fixed in the center position of the turntable with the H-plane, and the center position of the horn antenna is on the same horizontal line.

The positioning system enables the DUT to rotate throughout the spherical surface to meet the high accuracy of three-dimensional positioning. Each RF instrument, turntable controller and PC with automatic test software communicate through GPIB interface
