Cautions

Please pay attention to the following issues, otherwise, it may cause abnormal charging, high charging temperature, intermittent charging, or even not charging.

- Please put the phone/watch at the center of the charge area.
- We recommend QC2.0/3.0 Quick charger adapter (9V=1.67A), charges two devices at the same time, the charging speed would be slower.
- The charging distance is 2-10mm, please don't wear protective case which is over 3mm thick.
- The watch has temperature control. When the temperature reaches 40 °C / 104 °F, it will stop charging automatically. If the temperature is normal, it will continue to charge.
- No metal or magnetic objects around 6cm of the back center of the phone during charging.
- The lower temperature, the faster-charging speed. The charging speed is faster in winter than in summer.
- Please don't charge in high temperature and humid environments to avoid damage of circuit.
- Do not close with magnetic stripe or chip card (ID cards, bank cards, etc.) to avoid magnetic failure.
- Please keep the distance at least 20cm between implantable medical devices (pacemakers, implantable cochlear, etc.) and the wireless charger to avoid potential
- Put it at the place that children can't reach to avoid unnecessary accidents.
