Laird Technologies Test Services in Review

The Laird Technologies, Inc. laboratory located at W66 N220 Commerce Court Cedarburg, Wisconsin, 53012 USA is recognized through the following organizations:

A2LA – American Association for Laboratory Accreditation

Accreditation based on ISO/IEC 17025: 2017 with Electrical (EMC) Scope

A2LA Certificate Number: 1255.01

Scope of accreditation includes all test methods listed herein, unless otherwise noted.

Federal Communications Commission (FCC) – USA

Accredited recognition of two 3 meter Semi-Anechoic Chambers

Accredited Test Firm Registration Number: 953492

Innovation, Science and Economic Development Canada

ISED Site listing of two 3 meter Semi-Anechoic Chambers based on RSS-GEN – Issue 4

File Number: IC 3088A-2

File Number: IC 3088A-3

Company: Human Inc.	Page 3 of 29	Name: Human Headphones (Left & Right)
Report: TR 317406 NFMI		Model: 1701, 1702
Job: C-2951		Serial: 7406, 7354

1 TEST REPORT SUMMARY

During **1/17/19-3/18/19** the Equipment Under Test (EUT), **Human Headphones (Left & Right)**, as provided by **Human Inc.** was tested to the following requirements:

Federal Communications Commission Title 47

Requirements	Description	Specification	Method	Compliant
15.209 (a)	Radiated Emissions - Fundamental	30 $\mu\text{V}/\text{m}$ @ 30m	ANSI C63.10	Yes
15.209 (c)	Radiated Emissions – Spurious	Spurious $\leq$ Fundamental	ANSI C63.10	Yes
15.207 (a)	Conducted AC Emissions	See Section 5.2	ANSI C63.10	Yes
2.1049	Occupied Bandwidth	Reported	ANSI C63.10	Reported

Notice:

The results relate only to the item tested and described in this report. Any modifications made to the equipment under test after the specified test date(s) may invalidate the data herein.

If the resulting measurement margin is seen to be within the uncertainty value, as listed in this report, the possibility exists that this unit may not meet the required limit specification if subsequently tested.

2 CLIENT INFORMATION

Company Name	Human Inc.
Contact Person	Jingping Ma
Address	3100 Airport Way 25-512 Seattle, WA 98134

2.1 Equipment Under Test (EUT) Information

The following information has been supplied by the client

Product Name	Human Headphones
Model Number Left	1701
FCC ID Left	2ARJG-1701
Model Number Right	1702
FCC ID Right	2ARJG-1702
Serial Numbers	7406, 7354

2.2 Product Description

Left (model 1701) and right (model 1702) ear headphone units. The unit has two modes of operation; amplify mode when both ears are together and headphone mode when the units are on the user's head. The units use 10.5 MHz NFMI when in headphone mode to communicate with each other and 14.8 MHz NFMI while in amplify mode. The right ear unit receives audio via Bluetooth classic and input commands via BLE. The left ear unit receives OTA updates via BLE/BT.

The units are powered via 3.7 VDC Li-ion batteries. They are charged via a 5-pin charging port connected to a wall wart capable of an input voltage of 100-240 VAC, 50-60 Hz. The antenna for BLE/BT is a custom monopole antenna with a peak gain of 2.5 dBi. The manufacturer declared tune up tolerance is ± 1 dB.

2.3 Modifications Incorporated for Compliance

None noted at time of test

2.4 Deviations and Exclusions from Test Specifications

None noted at time of test

2.5 Programming Information

Two software applications were used to program the radios. Airoha AB152C Lab Test Tool, v2.1.1.15730 and Docklight v2.2.8.

Measurement Type	Configuration	Uncertainty $\pm$
Radiated Emissions	Biconical Antenna	5.0 dB
Radiated Emissions	Log Periodic Antenna	5.3 dB
Radiated Emissions	Horn Antenna	4.7 dB
AC Line Conducted Emissions	Artificial Mains Network	3.4 dB
Telecom Conducted Emissions	Asymmetric Artificial Network	4.9 dB
Disturbance Power Emissions	Absorbing Clamp	4.1 dB
Radiated Immunity	3 Volts/meter	2.2 dB
Conducted Immunity	CDN/EM/BCI	2.4/3.5/3.4 dB
EFT Burst/Surge	Peak pulse voltage	164 volts
ESD Immunity	15 kV level	1377 Volts

Parameter	ETSI U.C. $\pm$	U.C. $\pm$
Radio Frequency, from F0	1×10^{-7}	0.55×10^{-7}
Occupied Channel Bandwidth	5 %	2 %
RF conducted Power (Power Meter)	1.5 dB	1.2 dB
RF conducted emissions (Spectrum Analyzer)	3.0 dB	1.7 dB
All emissions, radiated	6.0 dB	5.3 dB
Temperature	1° C	0.65° C
Humidity	5 %	2.9 %
Supply voltages	3 %	1 %

5 TEST DATA

5.1 Radiated Emissions

Description of Measurement	The frequency spectrum is investigated for intentional and / or unintentional signals emanating from the EUT by use of a standardized test site and measurement antenna. The antenna, cable, pre-amp, and other necessary measurement system correction factors are loaded onto the EMI receiver / spectrum analyzer when the measurements are performed allowing the data to be gathered and reported as corrected values. The maximum emissions from the EUT are determined by turn-table azimuth rotation (360°) and scanning of the measurement antenna. Maximized levels are noted at degree values of azimuth, measurement antenna height, and measurement antenna polarity.
Example Calculations	Measurement (dBμV) + Cable factor (dB) + Other (dB) + Antenna Factor (dB/m) = Corrected Reading (dBμV/m) Margin (dB) = Limit (dBμV/m) - Corrected Reading (dBμV/m) Example at 4000 MHz: Reading = 40 dBμV + 3.4 dB + 0.9 dB + 6.5 dB/m = 50.8 dBμV/m Average Limit = 20 log (500) = 54 dBμV/m Margin = 54 dBμV/m - 50.8 dBμV/m = 3.2 dB

Block Diagram

5.1.1 Radiated Fundamental Emissions (Headset Mode 10.5 MHz NFMI)

Operator	Anthony Smith
QA	Zach Wilson
Test Date	1/17/2019, 1/21/2019
Location	Chamber 3
Temp. / R.H.	78.3°F/31.5%, 77°F/19.6%
Requirement	FCC 15.209
Method	ANSI C63.10

Limits: 29.5 dBμV/m @ 30m

Test Parameters

Frequency	10.5 MHz
Distance	3m
RBW	9 kHz
VBW	90 kHz
EUT Mode	Headset mode with NFMI Transmit at 10.5 MHz
EUT Orientations	Flat, Side, Vertical
Notes	Measurement extrapolated to limit distance. See Table
Example Calculation	$16.2 \text{ dB}\mu\text{V}/\text{m} = 39.8 \text{ dB}\mu\text{V}/\text{m} - 40 \log\left(\frac{4.5}{3}\right) - 20 \log\left(\frac{30}{4.5}\right)$ Limit for a frequency of 10.5 MHz From ANSI C63.10 Section 6.4.4.2 (equation 2)

5.2 AC Mains Conducted Emissions

A line impedance stabilization network (LISN) or artificial mains network (AMN) allows the emissions of the power supply conductors to be measured while isolating the EUT from the supply mains.

Description of Measurement

The AMN, cable, and other necessary measurement system correction factors are loaded onto the EMI receiver when the measurements are performed. The data is gathered and reported as the corrected values.

Maximum emissions are determined with a peak max hold trace then measurements at a selection of the highest points are made with quasi-peak and average detectors. Results are recorded and compared to limit for each line. (e.g. line and neutral)

Example Calculations

Measurement (dBμV) + Cable factor (dB) + Other (dB) = Corrected Reading (dBμV)
 Margin (dB) = Limit (dBμV) - Corrected Reading (dBμV)

5.2.2 AC Mains Conducted Emissions (Amplify Mode 14.8 MHz NFMI)

Operator	Zach Wilson
QA	Adam Alger
Test Date	3/15/2019
Location	Bench
Temp. / R.H.	30.1%RH / 20.6°C
Requirement	FCC 15.207
Method	ANSI C63.10

Limits: 15.207

Frequency (MHz)	Quasi Peak Limit (dBμV)	Average Limit (dBμV)
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50

* Decreases with the logarithm of the frequency

Test Parameters

Frequency	150 kHz – 30 MHz
Distance	80cm from Ground Plane
RBW	9 kHz
VBW	90 kHz
Detectors	Max peak hold for plots. Quasi peak and average detectors for final measurements.
EUT Mode	Amplify mode with NFMI transmit at 14.8 MHz
EUT Configuration	EUT on charger

Instrumentation

Date: 11-Jan-2019

Test: CE NFM1

Job: C-2951

PE: Zach Wilson

Customer: Human Inc.

Quote: 317406

6 REVISION HISTORY

Version	Date	Notes	Person
v0.0	3-8-19	Initial Draft	Zach Wilson
v0.1	3-8-19	Second Draft	Zach Wilson
v1.1	3-15-19	NFMI report contains both headset data sets now. No longer two reports. Removed the secondary "A, B" designation from report name.	Zach Wilson
v1.2	3-18-19	Extrapolated data to limit distance in tables. Added 99% BW data. Added more accurate frequencies in tables.	Zach Wilson
v1.3	3-19-19	Ready to issue	Zach Wilson
v1.4	4-8-19	Changed tables to reflect spurious emissions being compared to the fundamental per TCB comments.	Zach Wilson
