

Days on Site

- How long each asset has been within each Geofence is shown.
- Export as CSV will export an 'Excel' style spreadsheet of days on site.

Alerts

Phone list updated

Phone calls made for the following alerts:

- Relay Change

When an alert call is received, it can be temporarily disabled for next 60 minutes by following the instruction: pressing 99 when prompted. After 60 minutes, the alerts will be sent again as they occur. If no response is received or invalid entry is punched, the disable feature is not activated and alerts will be sent as they are received. Also, note that this is Lasso specific, and suppressing an alert for one has no effect on another Lasso

Calls will be made to these numbers

Submit

Alerts

- An alert record is made when a channel is >MAX or <MIN

API Calls

GET - LASO

This is used to get detailed information about a specific Radar. This is typically used along with 'List – Lasso' API to create master-detail view. The amount of detail returned can be controlled by specifying parameters to limit the number of data points as well as relevant timeframe. Note that the API retrieves only the sensor values which have been marked as 'display=true' through the Web interface.

Data returned in the XML file matches the rows and descriptions you used in the configuration page. Normally, the call is made from your server.

LIST - LASO

This is used to get list of all Lassos allocated to the default branch of a company.

TROUBLESHOOTING

Important Initial tests.

- Most problems can be traced to low battery voltage.
- Check battery voltage on display. Replace if less than 5.5 V
- Make sure that box has clear access to sky. No metal covering, railing, or grates.

No messages on web site being received

- Messages are only sent every few hours. Data should be sent shortly after you plug in batteries for the first time so make sure you have clear access to the sky.
- Make certain that the unit has a clear access to the sky and that the satellite signal is not blocked by metal. Messages may not be received at all if the signal is blocked.

No Tank level Readings

- Confirm that Radar is detected on display. Move to another location if no Radar.
- Check for proper configuration on keypad of distance to bottom of tank.

No GPS reports on web

- Confirm that GPS report time is set to 6 hours by using keypad
- Allow tank to sit in yard for a day to send data with clear access to the sky.

No data reports on web

- Confirm that Data report time is set to 5 hours by using keypad.
- Allow tank to sit in yard for a day to send data with clear access to the sky.

All columns not shown on web

- Use configure page to check boxes so that all desired channels are shown

Emails and text messages are not being received

- Make certain that your email and text addresses are entered on the Configure tab.
- INFO or ALERT check boxes must be set on the Configure page.

Gallons reading not accurate

- Distance from sensor face to fluid is not correct.
- Adjust the distance to bottom of tank using keypad until gallons reading is accurate.
