4. Test Result

4.1. Summary

Equipment Approval Consideration	Product Technical Specification	Result
(1) Wireless power transfer frequency is below 1 MHz	120kHz, 127.7kHz	Complied
(2) The output power from each primary coil is less than or equal to 15 watts.	Max 15W	Complied
(3) The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs may be powered on at the same time.	This device has three overlapping primary coils, and is only capable of wireless power transfer between one source and one client at a time, and allows wireless power transfer to take place between this zone and a single client device.	Complied
(4) Client device is placed directly in contact with the transmitter.	Placed directly	Complied
(5) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).	Mobile exposure conditions only	Complied
(6) The aggregate H-field strengths anywhere at or beyond 15 cm surrounding the device, and 20 cm away from the surface from all coils that by design can simultaneously transmit, and while those coils are simultaneously energized, are demonstrated to be less than 50% of the applicable MPE limit.	The test result (Refer to clause 4.6) can meet the requirements.	Complied
