DUT Information	
Device Identifier(s):	FCC ID: 2ATKL-M2-24
	IC: 25148-M224
Device Type:	Satellite Communication Module
Equipment Class (FCC):	Licensed Non-Broadcast Station Transmitter (TNB)
Equipment Class (ISED):	Mobile Earth Station
Device Model(s) / HVIN:	M2-24
Device Marketing Name / PMN:	Myriota Module
Firmware Version ID Number / FVIN:	n/a
Host Marketing Name / HMN:	n/a
Test Sample Serial No.:	T/A Sample - Identical Prototype
Transmit Frequency Range:	399.907 - 400.043MHz
Number of Channels:	n/a
Manuf. Max. Rated Output Power:	0.5W, 27dBm
Manuf. Max. Rated BW/Data Rate:	7kHz
Antenna Make and Model:	n/a
Antenna Type and Gain: *	Monopole Whip, 6dBi
Modulation:	MSK
Mode:	n/a
Emission Designator:	2K36G1D
DUT Power Source:	3.6VDC
Deviation(s) from standard/procedure:	None
Modification of DUT:	None

* Information on Antenna Type and Gain provided by applicant.

3.0 SCOPE

Preface:

This Certification Report was prepared on behalf of:

Myriota Pty Ltd

,(the '*Applicant*'), in accordance with the applicable Federal Communications Commission (FCC) CFR 47 and Innovation, Scientific and Economic Development (ISED) Canada rules parts and regulations (the '*Rules*'). The scope of this investigation was limited to only the equipment, devices and accessories (the '*Equipment*') supplied by the *Applicant*. The tests and measurements performed on this *Equipment* were only those set forth in the applicable *Rules* and/or the Test and Measurement Standards they reference. The *Rules* applied and the Test and Measurement Standards used during this evaluation appear in the Normative References section of this report. The limits set forth in the technical requirements of the applicable *Rules* were applied to the measurement results obtained during this evaluation and ,unless otherwise noted, these limits were used as the Pass/Fail criteria. The Pass/Fail statements made in this report apply to only the tests and measurements performed on only the *Equipment* tested during this evaluation. Where applicable and permissible, information including test and measurement data and/or results from previous evaluations of same or similar equipment, devices and/or accessories may be cited in this report.

Device:

The HVIN: M2-24, PMN: Myriota Module is a Single Limited TNB / Mobile Earth Station (MES) transceiver operating in the Earth-to-Space frequency band of 399.9 to 400.05MHz. This *Equipment* does not have ???

Requirement:

As per FCC 47 CFR Part 2, Subpart J and ISED RSP-100, certification is required in accordance with FCC 47 CFR Part 25 and ISED RSS-170. As per FCC 47 CFR §2.1091 an RF Exposure (SAR) evaluation is required for this *Equipment* and the results of the RF Exposure (SAR) evaluation appear in a separate report.

Application:

This is an application new certification of a Single Limited Modular Approval.

I attest that the data reported herein is true and accurate within the tolerance of the Measurement Instrument Uncertainty; that all tests and measurements were performed in accordance with accepted practices or procedures; and that all tests and measurements were performed by me or by trained personnel under my direct supervision. The results of this investigation are based solely on the test sample(s) provided by the client which were not adjusted, modified or altered in any manner whatsoever, except as required to carry out specific tests or measurements. This test report has been completed in accordance with ISO/IEC 17025.

6.0 FACILITIES AND ACCREDITATIONS

Facility and Accreditation:

The facilities used to evaluate this device outlined in this report are located at 21-364 Lougheed Road, Kelowna, British Columbia, Canada V1X 7R8. The radiated emissions site (OATS) conforms to the requirements set forth in ANSI C63.4 and is filed and listed with the FCC under Test Firm Registration Number CA3874 and Innovation, Science and Economic Development Canada under Test Site File Number ISED 3874A-1. Celltech is accredited to ISO 17025, through accrediting body A2LA and with certificate 2470.01.

7.0 CONDUCTED POWER

Test Procedure

Normative Reference	FCC 47 CFR §2.1046, §25.204, RSS-Gen (6.12), RSS-170 ANSI C63.26 (5.2.4.4.1)
----------------------------	---

Limits

47 CFR §25.204	40dBW
RSS-170 (5.3.2)	The maximum permissible e.i.r.p. will be the stated e.i.r.p. plus a 2 dB margin

General Procedure

ANSI C63.26	5.2.4.4.1 General Compute the power by integrating the spectrum across the OBW of the signal using the instrument's band or channel power measurement function, with the band/channel limits set equal to the OBW band edges.
--------------------	---

Test Setup	Appendix A - Figure A.1
-------------------	--------------------------------

Measurement Procedure

The DUT was connected to a Spectrum Analyzer (SA) via a 30dB attenuator connected to the DUT's antenna port. The SA was configured as above using the Channel Power measurement function. The output power of the DUT was set to the manufacturer's highest output power setting. The DUT was set to transmit at its maximum Duty Cycle.

Plot 7.1 – Conducted Output Power

Table 7.1 – Summary of Conducted Power Measurements (RMS)

Channel EIRP (RMS)									
Frequency (MHz)	BW (kHz)	Modulation	Measured Power [E _{Meas}] (dBm)	Antenna Gain (1) [G _T] (dBi)	Cable Loss [L _c] (dB)	EIRP (dBm)	EIRP (dBW)	Limit (dBW)	Margin (dB)
399.975	2.4	MSK	27.01	6	0.5	33.51	3.51	40.0	36.5
Result:								Complies	

$$\text{EIRP (dBm)} = E_{\text{Meas}} + G_T + L_C$$

$$\text{Margin} = \text{Limit} - \text{EIRP in dB}$$

9.0 CONDUCTED OUT OF BAND SPURIOUS EMISSIONS

Test Conditions

Normative Reference	FCC 47 CFR §2.1051, §25.202(f), RSS-Gen, RSS-170 (5.4.3.1)
	ANSI C63.26 5.7.3

Limits

47 CFR §25	(f) Emission limitations. Except for SDARS terrestrial repeaters and as provided for in paragraph (i), the mean power of emissions shall be attenuated below the mean output power of the transmitter in accordance with the schedule set forth in paragraphs (f)(1) through (f)(4) of this section. The out-of-band emissions of SDARS terrestrial repeaters shall be attenuated in accordance with the schedule set forth in paragraph (h) of this section. (1) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: 25 dB; (2) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: 35 (3) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 250 percent of the authorized bandwidth: An amount equal to 43 dB plus 10 times the logarithm (to the base 10) of the transmitter power in watts;
RSS-170	5.4.3.1. Mobile Earth Stations in All Frequency Bands The average power of unwanted emissions shall be attenuated below the average output power, P (dBW), of the transmitter, as specified below: (1) 25 dB in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 50%, up to and including 100% of the occupied bandwidth or necessary bandwidth, whichever is greater; (2) 35 dB in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 100%, up to and including 250% of the occupied bandwidth or necessary bandwidth, whichever is greater; and (3) 43 + 10 log p (watts) in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 250% of the occupied bandwidth or necessary bandwidth, whichever is greater.

11.0 FREQUENCY STABILITY

Test Conditions

Normative Reference	FCC 47 CFR §2.1055, §25.202(d), RSS-Gen, RSS-170 (5.2)
----------------------------	---

Limits

47 CFR §25.202	(d) Frequency tolerance, Earth stations. The carrier frequency of each earth station transmitter authorized in these services shall be maintained within 0.001 percent of the reference frequency.
RSS-170	5.2. Frequency Stability For mobile earth station equipment, the carrier frequency shall not depart from the reference frequency by more than ± 10 ppm.

Measurement Procedure

47 CFR §2.1055	Frequency Stability (a) The frequency stability shall be measured with variation of ambient temperature as follows: (1) From -30° to $+50^{\circ}$ centigrade for all equipment except that specified in paragraphs (a) (2) and (3) of this section. (b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. (d) The frequency stability shall be measured with variation of primary supply voltage as follows: (1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

APPENDIX C – MEASUREMENT INSTRUMENT UNCERTAINTY

CISPR 16-4 Measurement Uncertainty (U_{LAB})	
This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence interval using a coverage factor of k=2	
30MHz - 200MHz	
$U_{LAB} = 5.14\text{dB}$ $U_{CISPR} = 6.3\text{dB}$	
200MHz - 1000MHz	
$U_{LAB} = 5.90\text{dB}$ $U_{CISPR} = 6.3\text{dB}$	
1GHz - 6GHz	
$U_{LAB} = 4.80\text{dB}$ $U_{CISPR} = 5.2\text{dB}$	
6GHz - 18GHz	
$U_{LAB} = 5.1\text{dB}$ $U_{CISPR} = 5.5\text{dB}$	
If the calculated uncertainty U_{lab} is less than U_{CISPR} then:	
1	Compliance is deemed to occur if NO measured disturbance exceeds the disturbance limit
2	Non-Compliance is deemed to occur if ANY measured disturbance EXCEEDS the disturbance limit
If the calculated uncertainty U_{lab} is greater than U_{CISPR} then:	
3	Compliance is deemed to occur if NO measured disturbance, increased by ($U_{lab} - U_{CISPR}$), exceeds the disturbance limit
4	Non-Compliance is deemed to occur if ANY measured disturbance, increased by ($U_{lab} - U_{CISPR}$), EXCEEDS the disturbance limit
