4.4 Download and use APP

Attention:

The document will update because of APP update or other reasons, and can only be used as a guidance, unless otherwise stated. Description, information and suggestions don't constitute any guarantee.

Summary:

The document mainly states operation procedures and matters need attention for new users.

APP download and using environment

Phone with Android 4.4 or IOS 8.0 and upper version system, download "Puppy Robot" APP.

Method 1: Scan QR code

Scan with Android phone

Scan with iphone

Method 2: Turn to Google Play or App Store, search "Puppy Robot" and download.

Preparation:

1.Reset WIFI

Start main body, long press  and  together for 3 seconds, purple light flash.

WIFI indicator condition

purple light flash slowly: wait for connection
blue: Wi-Fi connected

2.Turn to phone "setting", WLAN setting, connect Wi-Fi (same name with main body Wi-Fi in APP).

3.Find the APP on your phone and click.

1) Register and login

1. Register if you are a new user. Input phone number or email address, set password, click "send verification code", and input the code after you receive it, click "register".

2. Input registered account with phone number or email address, input password and login.

3. If you have an account but forget password, click "forget password" to get your password back.

2) Add device

1. Click “add device” after login, add robot.

2. Follow the guidance in the APP, if the connection breaks because of bad signal, please try again.
- Turn on the power button (take out dust container first).
 - Click add device.
 - Press start and retour button and hold for 3 seconds.
 - Click “next”.

Take the following procedure with iPhone:

3. Connect home Wi-Fi, input Wi-Fi name and password, click “next”.
(Please set a password first if there is no password)

Take the following procedure with Android phone :

3. Connect robot hotspot.
(Wi-Fi name starts with puppy)

Take the following procedure with iPhone:

4. Turn to Wi-Fi setting, choose Wi-Fi name starts with "puppy".
Back to APP, click "connect to robot".

Take the following procedure with Android phone :

4. Connect home Wi-Fi, input Wi-Fi name and password, click "next".
(Please set a password first if there is nopassword)

5. Wait for the connection of phone and device.
(there may be connection failure if many devices under same Wi-Fi or too many phones connect to Wi-Fi, try it several times if failed.)

6. Connected successfully, turn to control page.

3) Operation page

Start/pause

- Click "Overall cleaning: start" to clean;
- Click "Overall cleaning: pause" to pause, and save cleaning schedule;
- Click "Overall cleaning: continue" to continue cleaning.

Switch cleaning mode

- There are three cleaning modes: "spot . cleaning" "overall cleaning" and "area cleaning", and start/pause/continue button, default mode is "overall cleaning" .
- For example, click "spot cleaning" while the robot is in "overall cleaning" mode, pop-up window remind "confirm to switch", click confirm, click "spot cleaning: start" to start.
- Switch to "area cleaning" mode in the same way.

Spot cleaning

Click "spot cleaning", there will be a square icon on the map, Long press and drag icon to a certain point, click "spot cleaning: start" robot will move to this point and start cleaning in a area of 1.5*1.5 meters.

(Start point is the center of the area)

Map partition

Area cleaning

1. Set map partition before first use;

2. Switch to "map partition", click "create new area";

3. Set a label for the area to be created, and there will be a square area to set in the map;

Area cleaning: normal cleaning

- Click "+" and "-" to add and deduct points, long press and move point to change the shape of cleaning area.
- The area will be defaulted as normal cleaning (marked with pink color), which means the robot will clean this area only. Press "save" to finish setting.

Area cleaning: deep cleaning

- Sensors don’t have to be replaced, but need to be wiped.

Diagnose

Click “diagnose” to this interface, and click “start to diagnose” to check, there will be a “√” if there is nothing wrong.

My device

Click “my device” to the management interface, and manage user list of the device showed on the page.

My device-shared device

Click the small gear button on the right top of “my device” for more control of the device.

- “Add devices” enable a user control many robots.
- “Switch device” enable a user switch control of robots.
- “Share device” enable many users control the robot together.

Product guidance

Click “product guidance” to enter product information interface, learn products according to user’s needs.

General setting

Click “general setting” to enter setting interface, update app, software manually, or set APP language.

5. Product maintenance

Warm tip:

Please make maintenance for the machine according to your usage frequency

5.1 Clean charging contactor

1. Please turn off the power or pull out the plug.
2. Please clean the machine with dry cloth each month.
3. Don't clean it with oils.

5.2 Clean dust container

5.2.1 Install and uninstall dust container

5.2.2 Clean dust container

1. Open dust container, pour the dust.

2. Clean dust container with a cleaning brush.

Suggestion: Clean the container every 3 days during the first month, and clean every week afterwards.

3. Take out filter components, clean dust on the filter with cleaning brush.

4. Wash dust container and filter net. (Note: dust container can not be reinstall into main body until it is totally dry.)

5. Put filter net into dust container after cleaning, and put dust container into the robot.

5.3 Clean main brush

5.3.1 Install and uninstall dust container

1. Push lock bar and pull up;

2. Grab the main brush and pull up;

3. Take out rubber bar and main brush.

5.3.2 Clean main brush

1. As showed in the picture, clean main brush and rubber bar regularly.

2. As showed in the picture above, clean hair and other particals twined on the main brush.
