

MOBILE PHONE Tank X Introduction Please read the user's manual to learn your mobile phone is the best condition. The manual has been verified and reviewed to guarantee the accuracy. Instructions and descriptions contained herein are accurate as of the time of publication. However, mobile phone development advanced, and the contents of this manual are subject to modification without further notification. Our company reserves the rights to updates to the manual. 1. Introduction 2. Power Power management With the phone powered on, you can prevent others from using your mobile phone without your approval. The original power password is 1234. 3. Insert the SIM card and the battery Turn on the phone and insert the battery before using the phone. 4. Startup and shutdown Press the key of power supply to start up or shut down the mobile phone. 5. Input Methods Needs to learn to charge one of Input Methods. 6. Phone Book You may save the information of contacts including names & telephone numbers in the phone book. The storable entries of contacts depend on the type of the card. 7. Message The cell phone supports sending of and receiving of SMS. You may check the quantities of sent and received messages from the menu of SMS account. 8. Write a message You may select multiple recipients to send the message to more than 1 person. SMS setting may select to send the SMS setting either of SMS sent & received, where you can send the number of the service center (SMS is obtained from the service provider). 9. General Security setting Restores the factory settings From the correct password, the phone will shut down to charge and phone settings back to factory default data value, the user of the function be used with caution. (Default password: 1234).	• Phone network setting The network is related to your network provider. Please get in contact with the network provider for this. Flight mode: The communication function is available in flight mode. Switch mode Use any select modes of dual standby and single-stand, GSM & GSM 2m and flight mode. • Video You may surf video with Web Browser, which means that you may surf online at any time and in any place. For details, please get in contact with the network service provider. • Camera In the camera of the video camera, you may set the exposure compensation, avoidance of blurring, white balance, special effect, profile, etc. • Audio Player In the playback of camera, you may set the photography mode etc. You may enter the album to check the format that the cell phone supports. • Video playback The mobile phone is used to play music files supported formats in the current player's list. • File manager Check the video or picture files supported by the cell phone. • PC manager For the memory card, you may establish a data file folder etc. • Call history You will call list time of calls, including missed calls, dialed calls and answered calls, or you may enter the operation list of missed calls, dialed calls and answered calls for check or delete. • FM Radio Turn on the function, and you may manually tune the channel. • Recorder Use the function you may record or listen to your own record. • Games The mobile phone provides 2 games, please use specific operation within the game operating instructions. • Connection Set up the GPRS access point • Account Set the "account data" to be provided by the network operator • Alarm Set the time of alarm clock. At the time of alarm clock, an alarm ring will be given as follows setting. • Bluetooth You may establish wireless connection with other compatible devices with the Bluetooth instructions. • PC connect Use the PC connect function in the mobile phone as to USB.	20. Lamp Support Lamp function. 21. Calendar Support Calendar function. 22. Calculator Support Calculator function 23. Original Accounts After the use of the device for supply of accounts, hereafter are some precautions for usage of the accounts: 1) Please keep the accessories of all kinds of mobile phone. 2) Hold the plug and pull out instead of pulling the power cord when you cut off the power supply. 3) Regularly check the mobile equipment in the extension to see whether there are corrects included and whether work normally. 4) Only use batteries, chargers and accessories approved by the manufacturer. Usage of other kinds of batteries, chargers and accessories may result in damage of the certification or warranty terms or even lead to disaster. Why is required to use the original accessories? Battery and charger are key parts of a mobile phone because they play important roles in guaranteeing the normal operation of the mobile phone as well as its safety. As shown in our long-term customer investigation and after-sales service that lots of mobile phone failures results from usage of non-original accessories, especially low-quality battery and charger. Hazards resulting from usage of ineligible battery and charger 1) Shorten the battery service life with times of battery charging/discharging much faster than that of the original battery. 2) Shorten the service life of the mobile phone largely. Unstable voltage will affect the normal operation of the mobile phone, resulting in permanent damage. 3) Affect the performance and reliability of the mobile phone, reducing the voice quality and being susceptible to external noise. 4) May result in shorting or explosion and thus endanger the personal safety of the customers. 24. About the battery Charging and discharging Charging battery is used for the equipment. The battery may be charged and discharged for several hundreds of times and finally will be disposed. To save the electricity price and call charges, please observe, please replace the battery, if the battery is indicated not used for the first time, if the battery has been used for a long time when used, it may be necessary to correct with the charger, disconnector and then reconnect in order to charge the battery when the charger is not used, please disconnect with the equipment and plug it not from the power socket. If the battery runs out of electricity, you may have to wait for a few minutes till the symbol of charging is shown on the screen, and then you can make and answer any call. Don't use the battery for any other purposes. Don't use any damaged charger or battery. • Usage and treatment of battery Avoid short circuit of battery. Otherwise, the battery may be damaged, and generate heat to cause fire hazard. Don't use the battery under high temperature or in this otherwise, it may explode. Don't attempt to take apart the battery.	Stop usage in case of damage or obvious aging of battery and charger. Return waste and used batteries to the supplier or specified recovery site. Don't throw waste to domestic garbage. 25. Maintenance and service Your equipment is a product with multiple design and process. Please use carefully. Following are some suggestions for you to effectively use the maintenance service. 1) Repair the equipment, the hardware, software, other parts or modules contain may contain internal matters, which may involve the electronic waste. If the equipment is washed, please take out of the battery. If the equipment is deeply dried and then put in the battery. 2) Don't use or store the equipment in dusty or filthy places, otherwise, the detachable parts and electronic elements may be damaged. 3) Don't put the equipment in overcharged places. 4) Don't leave the equipment in under-ventilated places, otherwise, when the temperature rises to normal, moisture may be generated within the equipment, resulting in damage of the circuit board. 5) Please open the equipment paper the description in the manual. Don't try any other means. 6) Don't throw, knock or shake the equipment. Any rough treatment of the equipment may result in damage of the inner circuit board and the equipment structure. 7) Don't leave the equipment with internal chemical, detergent or strong acid. 8) Don't point on yourself or the equipment. Pointing may block storage indication in detailed parts and thus affect the normal operation. 9) Clean the lens with clean dry soft cloth such as the camera lens, range sensor and light sensor. 10) Only use multi-line or approved antenna for substitution of the damaged one. Unapproved antenna, alteration or accessories may result in damage of the equipment and solution of relevant certification or radio equipment. 11) Please use the charger in indoor area. 12) Back up data that should be kept such as the address directory and calendar memo/records. 13) Please turn off the equipment and take out the battery to restore the equipment setting regularly to maintain the optimal performance. 14) The above suggestions also apply to your equipment, battery, charger and other accessories. In case any device doesn't work, please take it to the nearest authorized maintenance agency for repair.

SAR Information Statement Your MOBILE PHONE is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use on the head is 0.58 W/kg and when worn on the body, as described in this user guide, is 0.78 W/kg (Body-worn measurements often among phone models, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display/About section of http://www.fcc.gov website after searching on	FCC ID: 2AUWV-TANKX Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) website at http://www.ctia.com. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watt/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements. The SAR test distance is 10mm. FCC Statement Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: — Reorient or relocate the receiving antenna. — Increase the separation between the equipment and receiver. — Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. — Consult the dealer or an experienced radio/TV technician for help. This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
