

This document is intended to be used for reference only

Packing List:
 • Power adapter • Network cable • User Manual
 Please contact your service provider if any item is missing.

To operate the equipment safely and correctly, users should read the following precautions carefully before operating the equipment, and observe strictly during operations.

- Install the equipment in a well ventilated environment without high temperatures or direct sunlight to protect the equipment and its components from overheating, which can result in damage.

- Avoid moisture, dampness and water damage. Equipment exposed to water cannot work normally and can be extremely hazardous due to shorting.
- Do not lay this equipment on an unstable base. If you want to place the equipment at a height, use a sturdy stand or support. The equipment is firmly secured.
- Do not place the equipment in a place where it is exposed to falling objects.
- Falling down from high places would damage the equipment and its accessories, and warranty will be void.
- Do not use a heavy object on the equipment, and avoid violent collision.
- Do not use power supply adapter provided in the package only. Using other adapters may cause equipment damage or operation failures.
- The electrical load capacity of the socket and cables should meet the equipment's requirements. Do not use a power supply cable or extension cable that causes electric shock or fire. Regular checks on power supply wires and cables are essential. If a socket damaged, replace it at once.
- Power off the equipment in the event of lightning storms. Disconnect all cables (power, signal, audio, video, LAN, etc.) from the power cable, network cable and telephone line to avoid equipment damages caused by lightning stroke.
- If the equipment is not used for a long period, please shut off the power supply and disconnect all cables.
- Do not wash the equipment with water. Before cleaning the equipment case, please shut off the power supply and unplug the power cable.
- Do not touch the wires and cables with a wet hand.
- Do not touch the equipment with a wet hand.
- Do not touch the equipment with a wet hand.

The warranty is void if the product is opened, misused, damaged or modified in any way.
Contact your dealer without delay, if

- the power cable or the power plug appears damaged;
- the product has been exposed to rain or moisture;
- the product has fallen from high places;
- you fail to use the product normally in strict accordance with the user manual supplied.

Name	Function
SR1041Y	Ethernet interface :3, USB interface:1, Wi-Fi wireless access (2.4GHz, 5GHz).

- Power adapter input: 220V AC, 50Hz
- Overall power supply: Refer to equipment nameplate
- Working temperature: -10°C to 50°C
- Storage temperature: -20°C to 70°C
- Ambient humidity: 10% to 95% (Non-condensing)

The other specifications are shown in the following table.

Home Gateway	Dimension(L×W×H)	Overall Power Consumption	Mount-to-wall Hole Distance
SR1041Y	205*127*35.1mm	< 9W	100mm

The diagram shows the SR1041 device with its ports and status LEDs. The top panel has four screws. The bottom panel has the following ports and LEDs:

- Internet status LED (Green):** ON: The Internet access is normal. OFF: No Internet access. Blinking: The Internet interface is connected with data transmission.
- Power LED (Green):** ON: The device is normally powered. OFF: The device is not powered on.
- WLAN status LED (Green):** ON: WLAN is enabled. OFF: WLAN is disabled. Blinking: The WLAN interface is connected with data transmission.
- WPS status LED (Green):** ON: The WPS function is enabled. OFF: The WPS function is disabled. Blinking: The WPS function is in progress.
- Ethernet interface:** ON: The Ethernet is connected. Blinking: The Ethernet interface is connected with data transmission. OFF: The Ethernet is not connected.
- USB status LED:** ON: The USB is connected. Blinking: The USB interface is connected with data transmission. OFF: The USB is not connected.

The ports are labeled: Internet, Power, 2.4G, SS, WPS, WAVE, LAN1, LAN2, LAN3, and USB.

We appreciate your purchase of FiberHome product. Please read and fill in the warranty and keep it properly for the future use.

Warranty Description

When you purchase a product offered by Fiberhome from an authorized dealer, you have a 12-month warranty as standard, except for man-made causes. The warranty period begins on the date of invoice.

For your lawful rights and interests, please notice:

1. The Warranty Card shall come into force with the seal of dealer.
2. Please keep this card properly. No ressource will be provided if you lose it and it becomes invalid if altered.
3. In the event of a non man-made malfunction during the warranty period, Fiberhome will repair or replace this product to its original operating condition free of charge.

Warranty does not cover the following circumstances:

1. Damage or malfunction caused by transporting, loading and unloading.
2. Damage or malfunction caused by man-made reasons such as opening or remodel the machine on users' own.
3. Damage or malfunction caused by unsatisfactory environment.
4. Damage or malfunction caused by force majeure incidents (such as fire, earthquake, lightning strike, war).
5. Damage or malfunction caused by failure to operate and maintain in accordance with the user's manual.
6. Damage of external parts such as equipment enclosure, power connect or in operation.
7. The nonexistence of the Warranty Card and the product serial number, or the warranty card has been altered.

We provide paid repair and maintenance service for the products that are beyond the warranty scope. The final explanation rights of this warranty description are reserved by Fiberhome.

Zip code : 430074

Connection and Use

Step 1: Set up connections as indicated in the figure.

Step 2: Press down the On/Off button on the device. When the Power status LED is ON, the device is switched on and correctly powered.

Step 3: Enable the Wi-Fi function of the SR1041Y and the client terminal to access wireless Internet. Search your wireless network name and enter the correct password (see the label on the back of the device for the SSID and password) to access the wireless network.

Reset button: Press and hold for less than 5 seconds to reset the device. Press and hold for 10 seconds or longer to restore to factory default.

WPS button: Press to enable wireless code function.

Advanced Settings

The SR1041Y supports the wireless function. You can configure SSID and password settings under the following professional instructions.

Caution

1. The service radius of the SR1041Y wireless signal is larger than 50m in normal condition. For the best possible performance, please minimize obstacles between the device and client terminals.
2. Before building network connections, mount the device on either a table or a wall.
- Desk top mounting: Place the device on the stable desktop.
- Wall mounting: Drill two holes for mounting screws for recesses on the back plane according to the mounting hole distance list in product specification. Insert a screw into each hole and slide the device down until the screws fit snugly into the wall-mount slots.

Caution

This operation is optional. You can use the default configuration before delivery.

Step 1: Set up connections as indicated in the figure.

Step 2: Press the On/Off button. The Power LED indicator is ON indicating that the equipment is powered on successfully.

Step 3: Set your PC to obtain an IP address automatically.

Step 4: Open the web browser and enter <http://192.168.XX.XX> in the address bar (Management IP address in the bottom shell label).

Step 5: Enter the username and password in the login window (Username and password in the bottom shell label) and click Login to access the web configuration GUI.

Step 6: You can configure WiFi on the corresponding page.

FAQs

FAQ1: Why all the indicators are off?
1. Check the connection between the power adapter and the power socket.
2. Check whether the power switch is turned on.

FAQ2: Why the WLAN indicator is not on?
• Check whether the WLAN function has been enabled.

FAQ3: Why the internet indicator is not on.
• Check whether the device is connected to the Internet.

FAQ4: Why the LAN indicator is not on?
• Check the following:
——The connection between the device and the PC, the hub, or the STB.
——The running status of the computer, hub, or STB.

FAQ5: Why the web configuration page of the device fail to be accessed?
• Choose Start → Run from the PC. Enter Ping 192.168.1.1 (the default IP address of the device) in the DOS window. If the web configuration page still cannot be accessed, check the following configuration:
——The type of network cable.
——The connection between the device and the computer.
——The TCP/IP properties of the network card of the computer.

FAQ6: Why the computer is unable to access the Internet?
1. Verify whether the network interface is connected normally via the network cable.
2. If not, reconnect the network interface. Check whether the WLAN function of the computer is enabled. Check whether the SSID name and the password are correct.
3. If proxy server settings of the browsers (e.g. IE) are enabled, please disable these functions.
4. Check whether the computer has been set to obtain the IP address automatically.
5. Check whether the internet LED is normal.
6. Please contact service provider to check whether the internet device quality exceeds the limit set by service provider.

FCC Statement

FCC Statement

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.
This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
FCC CAUTION: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.
