

6.1.1 Channel 20dB-bandwidth

Test set-up:

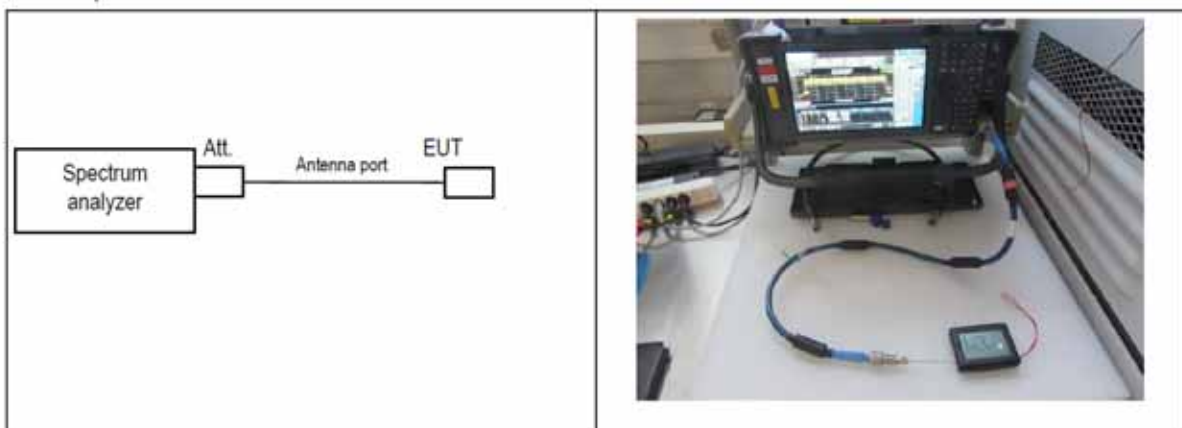

6.1.2 Carrier frequency separation

Test set-up:

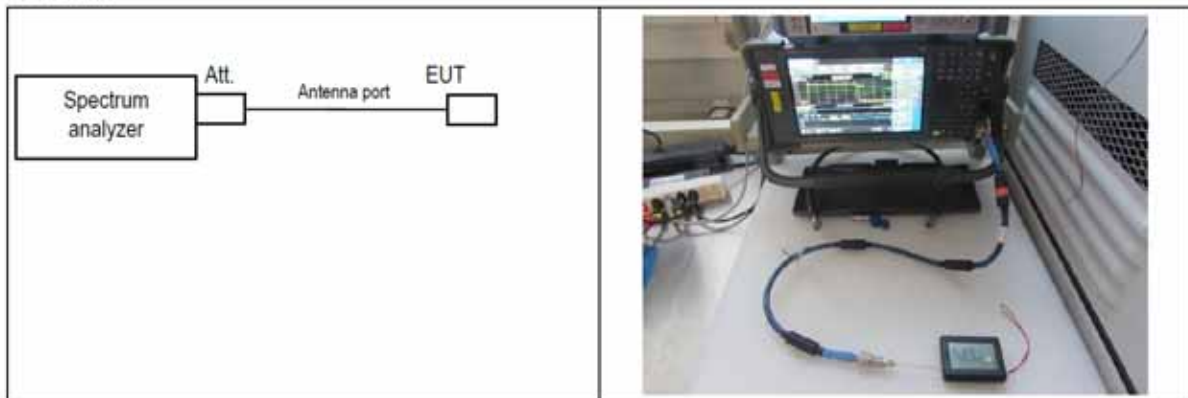

6.1.3 Number of hopping channels

Test set-up:

6.1.4 Time of occupancy (dwell time)

Test set-up:

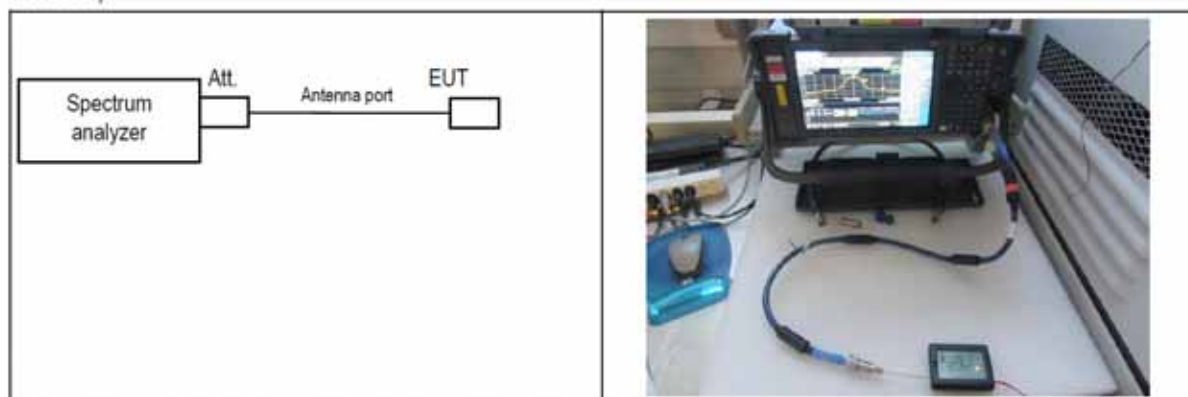

6.1.6 Antenna gain & effective radiated power

Test set-up:

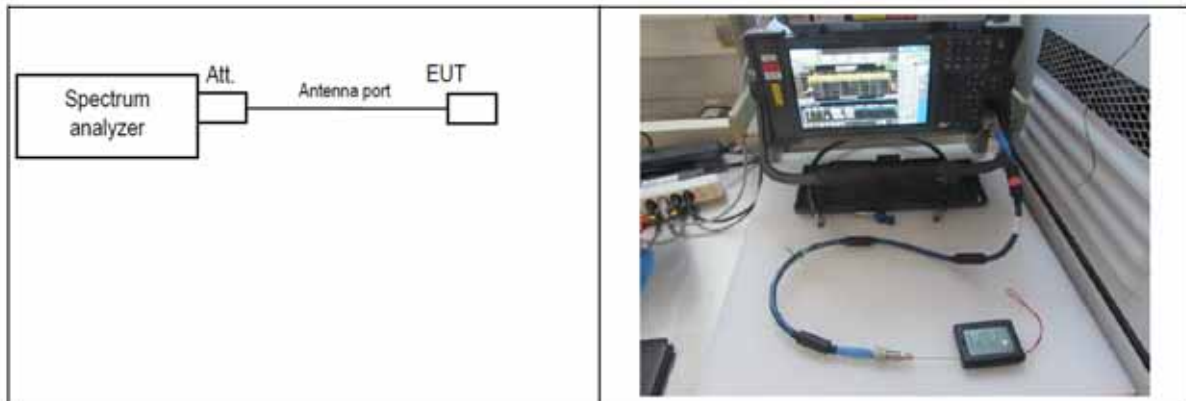

6.1.7 Maximum output power (conducted)

Test set-up:

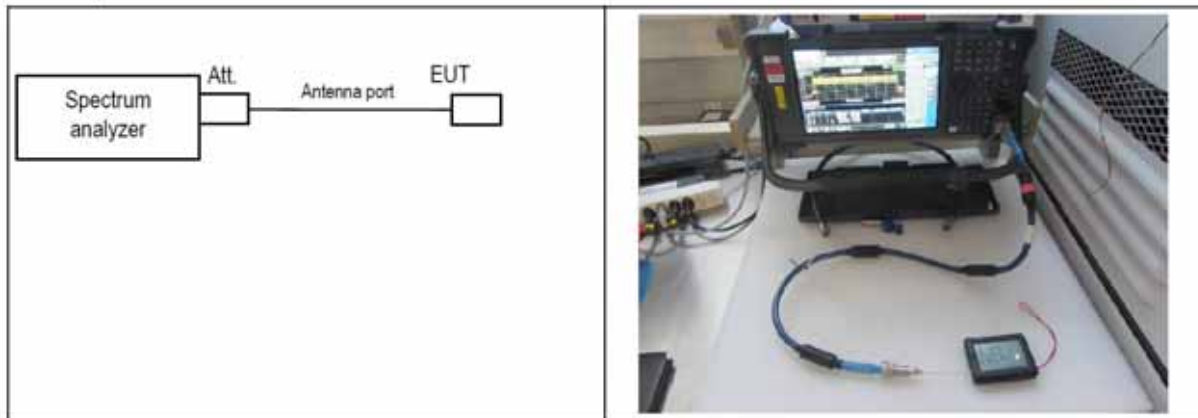

6.1.8 Band-edge emission (conducted)

Test set-up:

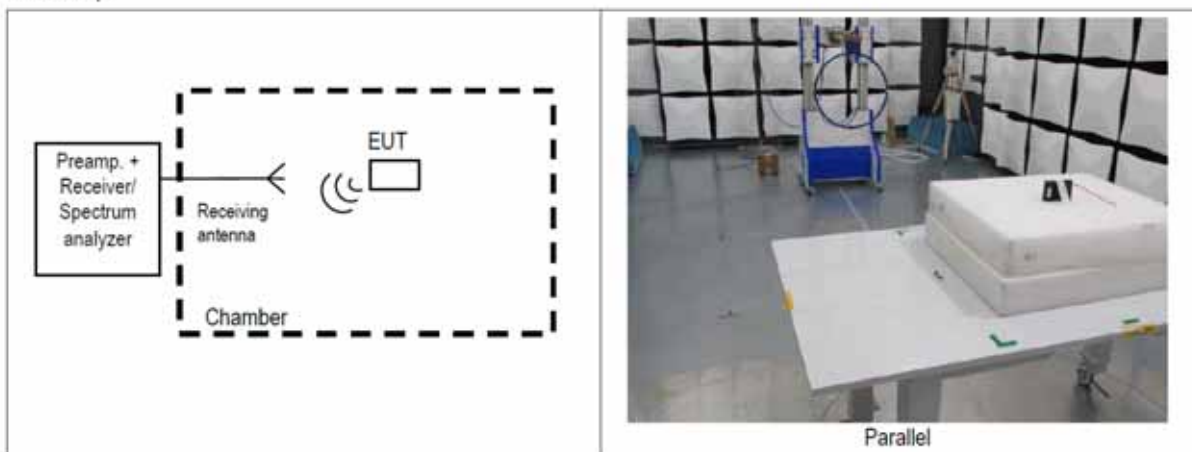

6.1.9 Spurious emissions – conducted (transmitter – 9 kHz to 9.5 GHz)

Test set-up:

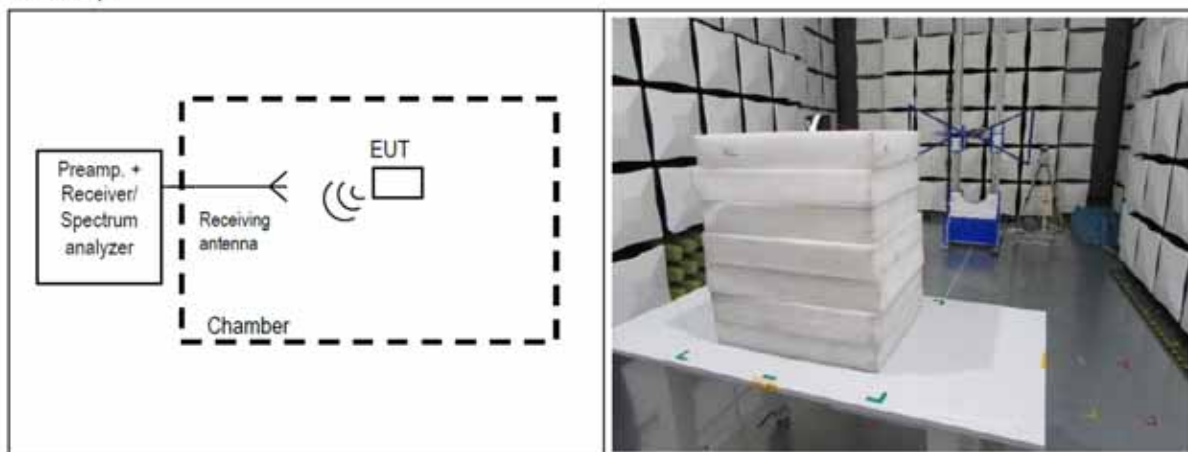

6.1.10 Spurious emissions, transmit mode – radiated

Test set-up:

6.1.10.2 30 MHz to 1 GHz

Test set-up:

6.1.10.3 1 GHz to 2.5 GHz

Test set-up:

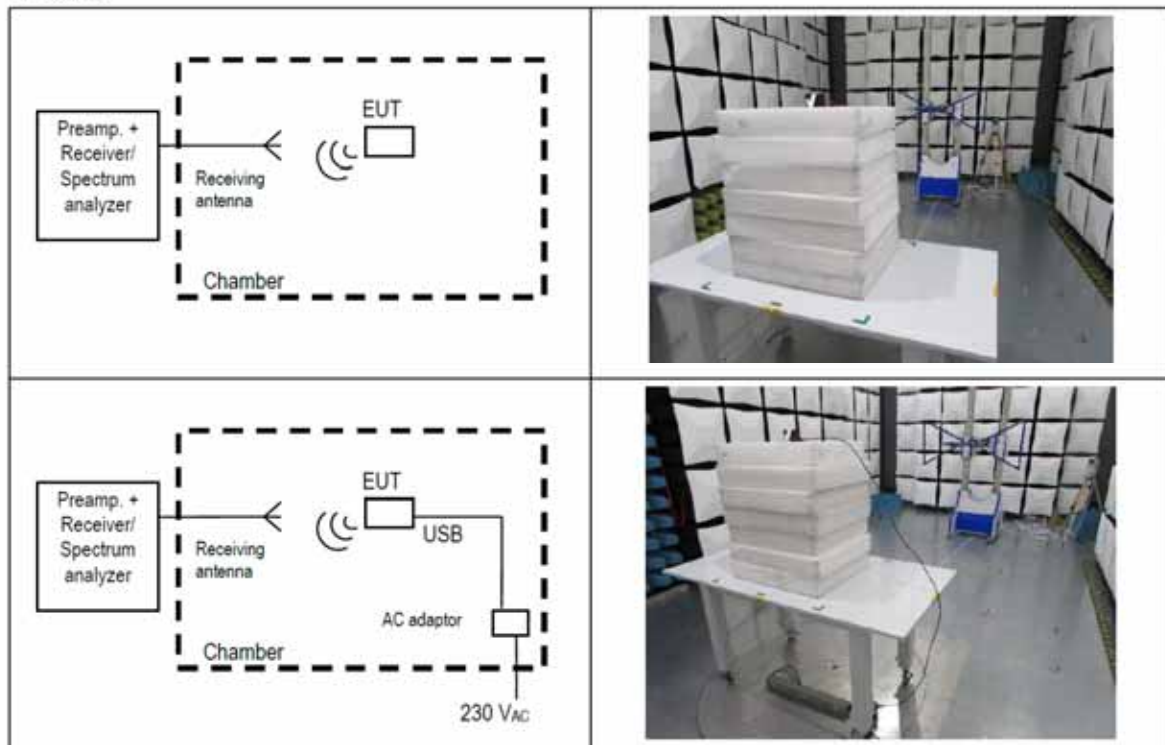

6.1.10.4 2.5 GHz to 10 GHz

Test set-up:

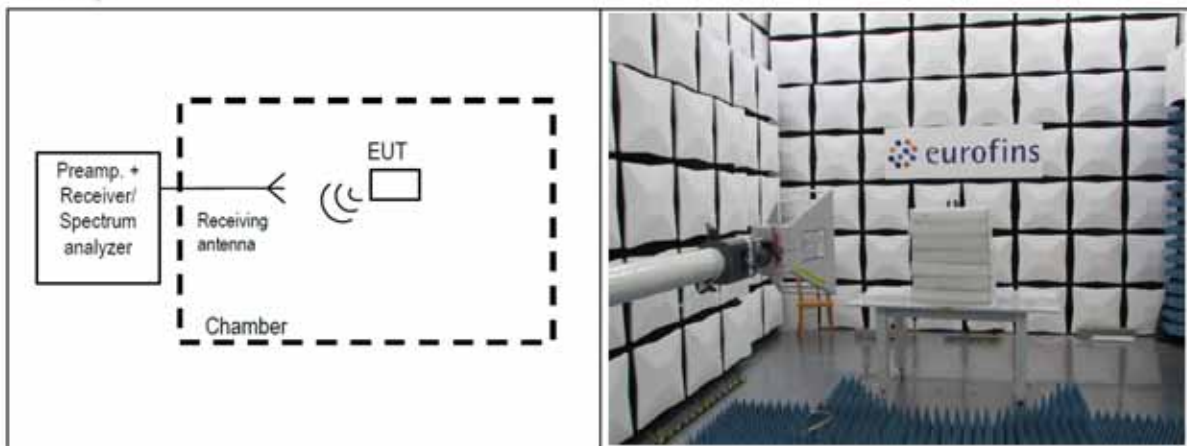

6.1.11 Spurious emissions, receive mode – radiated

Test set-up:

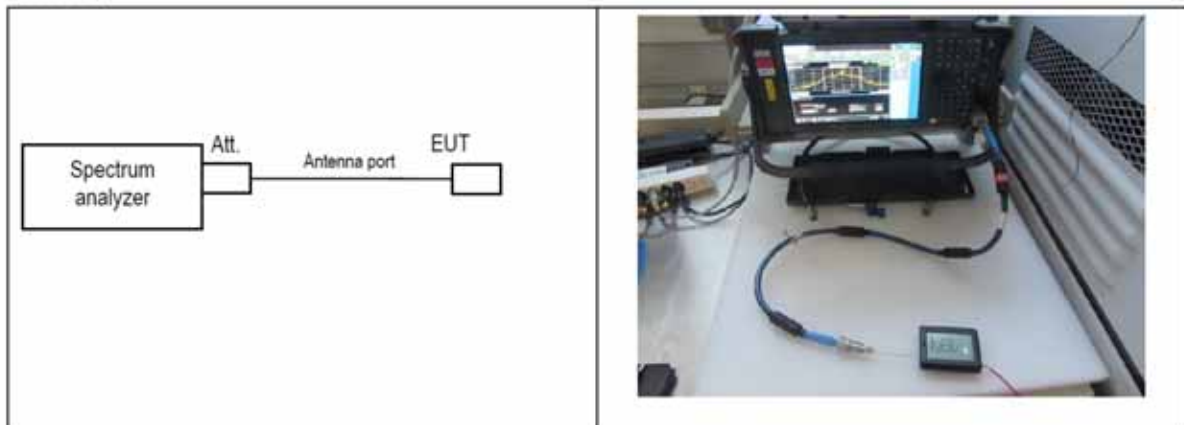

6.1.11.2 1 GHz to 10 GHz (FCC / industry Canada)

Test set-up:

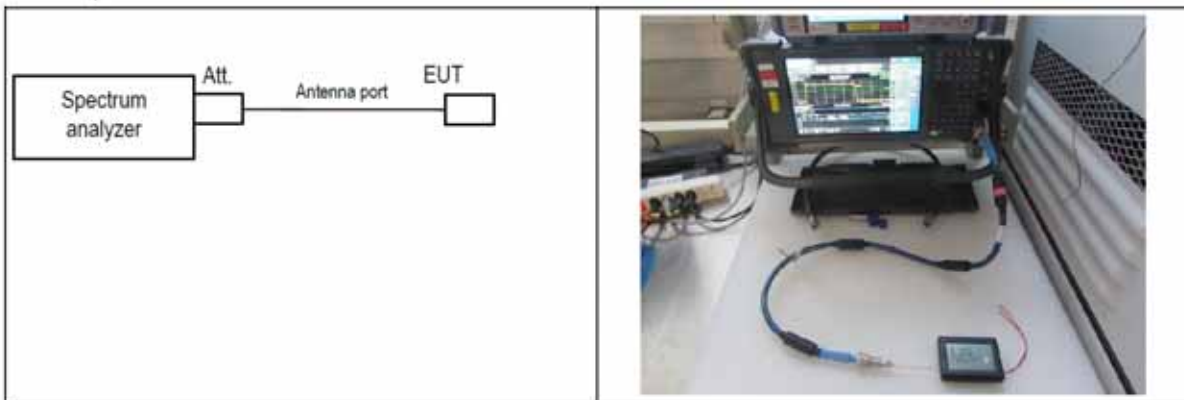

6.2.2 Channel 6 dB Bandwidth

Test set-up:

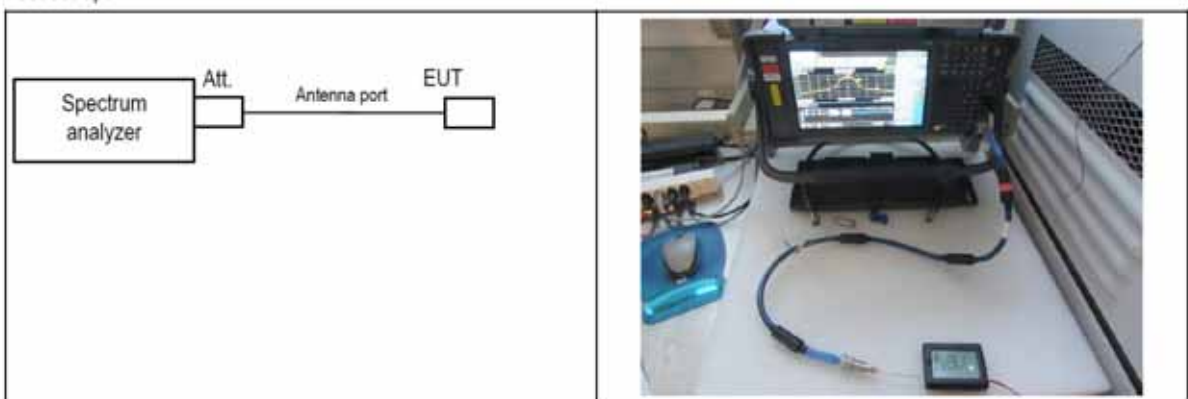

6.2.3 Duty Cycle

Test set-up:

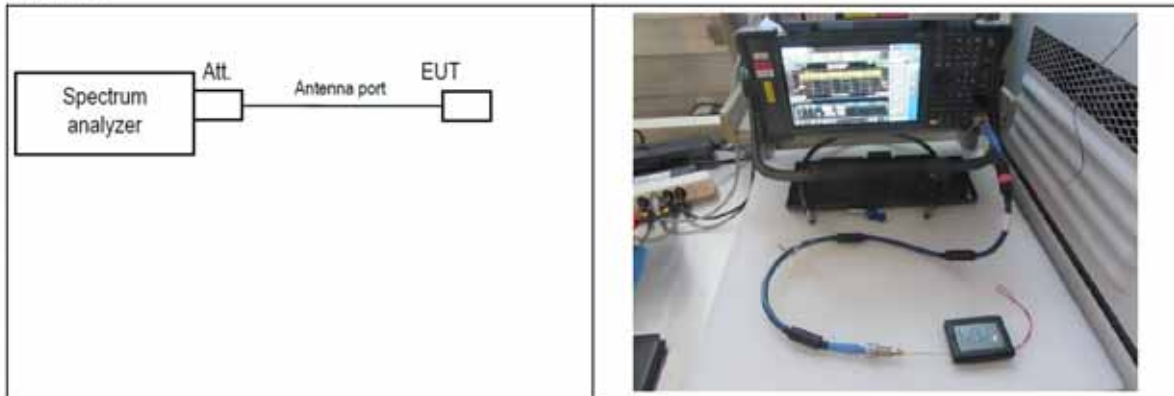

6.2.4 Maximum output power (conducted)

Test set-up:

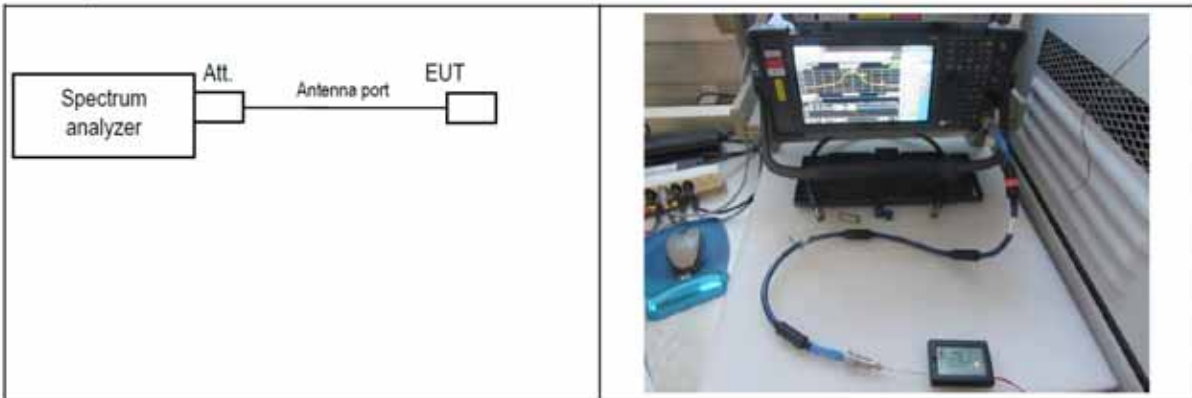

6.2.5 Band Edge Emission

Test set-up:

6.2.6 Power Spectral Density

Test set-up:

6.2.7 Spurious emissions, transmit mode – radiated

Test set-up:

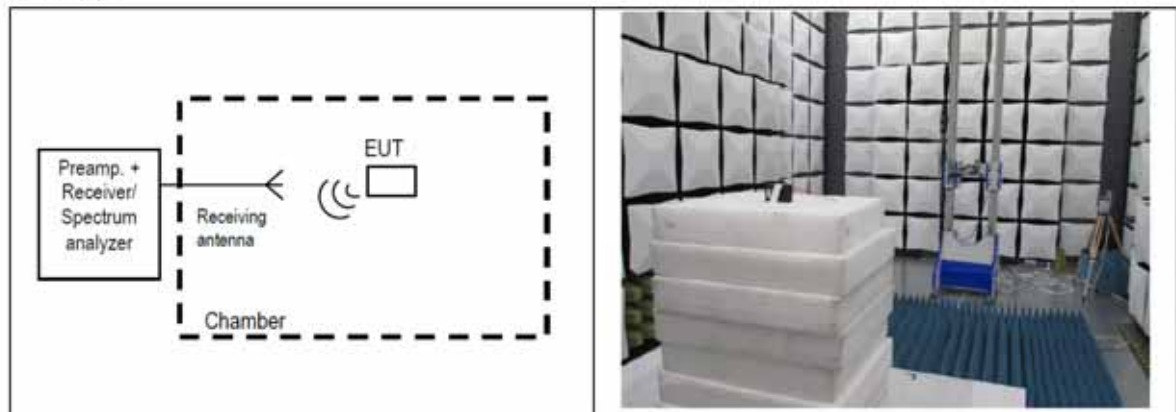

6.2.7.2 30 MHz to 1 GHz

Test set-up:

6.2.7.3 1 GHz to 2.5 GHz (FCC / industry Canada)

Test set-up:

6.2.7.4 2.5 GHz to 10 GHz (FCC / industry Canada)

Test set-up:

6.2.8 Spurious emissions, receive mode – radiated

30 MHz to 1 GHz

Test set-up:

6.2.8.2 1 GHz to 10 GHz (FCC / industry Canada)

Test set-up:

6.3 Conducted emission – Interference voltage

Test set-up:
