The results reported herein have been performed in accordance with the laboratory's terms of accreditation. This report shall not be reproduced except in full without the written approval of the Laboratory. The results in this report apply to the test sample(s) mentioned above at the time of the testing period only and are not to be used to indicate applicability to other similar products. This report does not imply that the product(s) has met the criteria for certification.

## 2. TEST METHODOLOGY

The tests documented in this report were performed in accordance with FCC KDB 558074 D01 15.247 Meas Guidance v05r02, KDB 414788 D01 Radiated Test Site v01r01, ANSI C63.10-2013, FCC CFR 47 Part 2, FCC CFR 47 Part 15.

## 3. FACILITIES AND ACCREDITATION

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Note 1: All tests measurement facilities use to collect the measurement data are located at No. 2, Chengwan Road, Suzhou Industrial Park, Suzhou 215122, People's Republic of China

Note 2: For below 30MHz, lab had performed measurements at test anechoic chamber and comparing to measurements obtained on an open field site. These measurements below 30MHz had been correlated to measurements performed on an OFS.

Note 3: The test anechoic chamber in UL-CCIC COMPANY LIMITED had been calibrated and compared to the open field sites and the test anechoic chamber is shown to be equivalent to or worst case from the open field site.

## 4. CALIBRATION AND UNCERTAINTY

### 4.1. MEASURING INSTRUMENT CALIBRATION

The measuring equipment utilized to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

### 4.2. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

| Test Item                                                                                                                                     | Uncertainty          |
|-----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| Conduction emission                                                                                                                           | 3.1dB                |
| Radiation Emission test(include Fundamental emission)<br>(9KHz-30MHz)                                                                         | 3.4dB                |
| Radiation Emission test(include Fundamental emission)<br>(30MHz-1GHz)                                                                         | 3.4dB                |
| Radiation Emission test<br>(1GHz to 26GHz)( include Fundamental emission)                                                                     | 3.9dB (1GHz-18Gz)    |
|                                                                                                                                               | 4.2dB (18GHz-26.5Gz) |
| Note: This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2. |                      |

;

## 5. EQUIPMENT UNDER TEST

### 5.1. DESCRIPTION OF EUT

|                       |                                                                                                                                                                                          |

Only the main model **IPC-S42FP-C** was tested and only the data of this model is shown in this test report.

Since Their electrical circuit design, layout, components used and internal wiring are identical, only the name of the models.

## 5.2. MAXIMUM OUTPUT POWER

| Number of Transmit Chains (NTX) | IEE Std. 802.11   | Channel Number | Max AV Conducted Power (dBm) |
|---------------------------------|-------------------|----------------|------------------------------|
| 1                               | IEEE 802.11B SISO | 1-11[11]       | 15.40                        |
| 1                               | IEEE 802.11G SISO | 1-11[11]       | 14.44                        |
| 1/2                             | IEEE 802.11nHT20  | 1-11[11]       | 16.62                        |
| 1/2                             | IEEE 802.11nHT40  | 3-9[7]         | 14.05                        |

## 5.3. CHANNEL LIST

| Channel List for 802.11b/g/n (20 MHz) |                 |         |                 |         |                 |         |                 |
|---------------------------------------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|
| Channel                               | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
| 1                                     | 2412            | 4       | 2427            | 7       | 2442            | 10      | 2457            |
| 2                                     | 2417            | 5       | 2432            | 8       | 2447            | 11      | 2462            |
| 3                                     | 2422            | 6       | 2437            | 9       | 2452            |         |                 |

| Channel List for 802.11n (40 MHz) |                 |         |                 |         |                 |         |                 |
|-----------------------------------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|
| Channel                           | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
| 3                                 | 2422            | 5       | 2432            | 7       | 2442            | 9       | 2452            |
| 4                                 | 2427            | 6       | 2437            | 8       | 2447            |         |                 |

#### 5.4. TEST CHANNEL CONFIGURATION

| Test Mode             | Test Channel      | Frequency                 |
|-----------------------|-------------------|---------------------------|
| WiFi TX(802.11b)      | CH 1, CH 6, CH 11 | 2412MHz, 2437MHz, 2462MHz |
| WiFi TX(802.11g)      | CH 1, CH 6, CH 11 | 2412MHz, 2437MHz, 2462MHz |
| WiFi TX(802.11n HT20) | CH 1, CH 6, CH 11 | 2412MHz, 2437MHz, 2462MHz |
| WiFi TX(802.11n HT40) | CH 3, CH 6, CH 9  | 2422MHz, 2437MHz, 2452MHz |

#### 5.5. THE WORSE CASE POWER SETTING PARAMETER

| The Worse Case Power Setting Parameter under 2400 ~ 2483.5MHz Band |                         |              |      |       |            |      |      |
|--------------------------------------------------------------------|-------------------------|--------------|------|-------|------------|------|------|
| Test Software                                                      |                         | Secure CRT   |      |       |            |      |      |
| Modulation Mode                                                    | Transmit Antenna Number | Test Channel |      |       |            |      |      |
|                                                                    |                         | NCB: 20MHz   |      |       | NCB: 40MHz |      |      |
|                                                                    |                         | CH 1         | CH 6 | CH 11 | CH 3       | CH 6 | CH 9 |
| 802.11b                                                            | 1                       | N/A          | N/A  | N/A   | /          |      |      |
| 802.11g                                                            | 1                       | N/A          | N/A  | N/A   |            |      |      |
| 802.11n HT20                                                       | 1/2                     | N/A          | N/A  | N/A   |            |      |      |
| 802.11n HT40                                                       | 1/2                     | /            |      |       | N/A        | N/A  | N/A  |

## 5.6. DESCRIPTION OF AVAILABLE ANTENNAS

| Ant. | Frequency (MHz) | Antenna Type     | Antenna Gain (dBi) | Directional gain(dBi) |
|------|-----------------|------------------|--------------------|-----------------------|
| 1    | 2400-2483.5     | Monopole Antenna | 3.9                | 6.91                  |
| 2    | 2400-2483.5     | Monopole Antenna | 3.9                |                       |

Note:

- 1) Directional gain=  $10\log [(10^{G1/20} + 10^{G2/20})^2 / N_{ANT}] = 6.91$  dBi
- 2)  $N_{ANT}$ : the number of Antenna
- 3) For this product, it has two antennas, antenna1 and antenna2, but only the 802.11N HT20 and 802.11N HT40 modes can support both the SISO and MIMO technical. For the modes of 11B&11G only the antenna1 is working.

| Test Mode                | Transmit and Receive Mode | Description                                                                       |
|--------------------------|---------------------------|-----------------------------------------------------------------------------------|
| IEEE 802.11b             | ☒1TX, 1RX                 | Antenna1 can be used as transmitting/receiving antenna independently.             |
| IEEE 802.11g             | ☒1TX, 1RX                 | Antenna1 can be used as transmitting/receiving antenna independently.             |
| IEEE 802.11N (HT20) MIMO | ☒2TX, 2RX                 | Antenna1 or Antenna2 can be used as transmitting/receiving antenna independently. |
| IEEE 802.11N (HT20) MIMO | ☒2TX, 2RX                 | Antenna1 or Antenna2 can be used as transmitting/receiving antenna independently. |

Remark:

- 1) For this product, it has two antennas, antenna1 and antenna2, only the 802.11N HT20 and 802.11N HT40 modes can support both the SISO and MIMO technical. For the modes of 11B&11G only the antenna1 is working.
- 2) For the 11N mode (including the 11N HT20 SISO, 11N HT20 MIMO, 11N HT40 SISO, 11N HT40 MIMO), pre-testing all test modes, only the worst case modes is included in this report.

## 5.7. THE WORSE CASE CONFIGURATIONS

For the product, there two transmission antennas, and pre-testing both of them, only the worse data for the antenna is recorded in the report.

Worst-case data rates as provided by the client were:

802.11b mode: 1 Mbps  
802.11b mode: 6 Mbps  
802.11n HT20 mode: MCS0  
802.11n HT40 mode: MCS0

## 5.8. TEST ENVIRONMENT

| Environment Parameter | Selected Values During Tests |           |
|-----------------------|------------------------------|-----------|
| Relative Humidity     | 55 ~ 65%                     |           |
| Atmospheric Pressure: | 1010Pa                       |           |
| Temperature           | TN                           | 23 ~ 28°C |
| Voltage :             | VL                           | N/A       |
|                       | VN                           | AC 120V   |
|                       | VH                           | N/A       |

Note: VL= Lower Extreme Test Voltage  
VN= Nominal Voltage  
VH= Upper Extreme Test Voltage  
TN= Normal Temperature

## 5.9. DESCRIPTION OF TEST SETUP

| Item | Equipment             | Brand Name | Model Name | Description      |
|------|-----------------------|------------|------------|------------------|
| 1    | Laptop                | ThinkPad   | E550c      | N/A              |
| 2    | Fixed Frequency Board | N/A        | N/A        | Supply by UL Lab |

### I/O PORT

| Cable No | Port | Connector Type | Cable Type | Cable Length(m)                    | Remarks |
|----------|------|----------------|------------|------------------------------------|---------|
| 1        | LAN  | LAN            | LAN Cable  | 100cm Length<br>(Supply by UL Lab) | N/A     |
| 2        | USB  | USB            | USB-VGA    | 100cm Length<br>(Supply by UL Lab) | N/A     |

### ACCESSORY

| Item | Accessory     | Brand Name | Model Name | Description      |
|------|---------------|------------|------------|------------------|
| 1    | Micro SD card | Kingston   | 32GB       | Supply by UL lab |

### TEST SETUP

The EUT can work in an engineer mode with a software through a table PC.

### SETUP DIAGRAM FOR TESTS

Remark: The EUT has been built one SD card during the testing

### 5.10. MEASURING INSTRUMENT AND SOFTWARE USED

| Conducted Emissions (Instrument)    |                                         |                                  |                                     |             |                 |            |            |

## 7. ANTENNA PORT TEST RESULTS

### 7.1. ON TIME AND DUTY CYCLE

#### LIMITS

None; for reporting purposes only

#### PROCEDURE

FCC KDB 558074 Zero-Span Spectrum Analyzer Method

#### TEST SETUP

#### RESULTS

| Mode     | On Time (msec) | Period (msec) | Duty Cycle x (Linear) | Duty Cycle (%) | Duty Cycle Correction Factor (db) | 1/T Minimum VBW (KHz) |
|----------|----------------|---------------|-----------------------|----------------|-----------------------------------|-----------------------|
| 11B      | 100            | 100           | 1                     | 100            | 0                                 | 0.01                  |
| 11G      | 100            | 100           | 1                     | 100            | 0                                 | 0.01                  |
| 11N HT20 | 100            | 100           | 1                     | 100            | 0                                 | 0.01                  |
| 11N HT40 | 100            | 100           | 1                     | 100            | 0                                 | 0.01                  |

Note: 1) Duty Cycle Correction Factor= $10\log(1/x)$ .

2) Where: x is Duty Cycle(Linear)

3) Where: T is On Time (transmit duration)

4) Pre-testing Antenna 1 and Antenna2, and pre-testing SISO and MIMO modes, only the data of worse case is shown in this test report.

## 7.2. 6 dB BANDWIDTH

### LIMITS

| FCC Part15 (15.247) Subpart C |               |                      |                       |
|-------------------------------|---------------|----------------------|-----------------------|
| Section                       | Test Item     | Limit                | Frequency Range (MHz) |
| FCC 15.247(a)(2)              | 6dB Bandwidth | $\geq 500\text{KHz}$ | 2400-2483.5           |

### TEST PROCEDURE

Refer to FCC KDB 558074, connect the UUT to the spectrum analyzer and use the following settings:

|                  |                                                |
|------------------|------------------------------------------------|
| Center Frequency | The centre frequency of the channel under test |
| Detector         | Peak                                           |
| RBW              | For 6dB Bandwidth :100K                        |
| VBW              | For 6dB Bandwidth : $\geq 3 \times \text{RBW}$ |
| Trace            | Max hold                                       |
| Sweep            | Auto couple                                    |

Allow the trace to stabilize and measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

### TEST SETUP

## RESULTS

| Test Mode | Test Antenna | Test Channel | 6dB bandwidth (MHz) | Result |
|-----------|--------------|--------------|---------------------|--------|
| 11B SISO  | Antenna 1    | LCH          | 10.07               | Pass   |
|           |              | MCH          | 10.08               | Pass   |
|           |              | HCH          | 10.08               | Pass   |
| 11G SISO  | Antenna 1    | LCH          | 16.57               | Pass   |
|           |              | MCH          | 16.57               | Pass   |
|           |              | HCH          | 16.57               | Pass   |
| 11N20MIMO | Antenna 1    | LCH          | 17.78               | Pass   |
|           |              | MCH          | 17.79               | Pass   |
|           |              | HCH          | 17.78               | Pass   |
|           | Antenna 2    | LCH          | 17.78               | Pass   |
|           |              | MCH          | 17.78               | Pass   |
|           |              | HCH          | 17.79               | Pass   |
| 11N40MIMO | Antenna 1    | LCH          | 36.44               | Pass   |
|           |              | MCH          | 36.44               | Pass   |
|           |              | HCH          | 36.45               | Pass   |
|           | Antenna 2    | LCH          | 36.42               | Pass   |
|           |              | MCH          | 36.43               | Pass   |
|           |              | HCH          | 36.44               | Pass   |

### Remark:

- 1) For this product, it has two antennas, antenna1 and antenna2, but only the 802.11N HT20 and 802.11N HT40 modes can support both the SISO and MIMO technical. But for the modes of 11B & 11G, only the antenna 1 is working.
- 2) Through pre-testing all the test modes of 11N 20 and 11N40, including SISO and MIMO, but only the data if worse case is included in this test report.

## Test Graphs

### For 6dB Bandwidth part:

**For Antenna2 part:**

### 7.3. CONDUCTED POWER

#### LIMITS

| FCC Part15 (15.247) , Subpart C                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |              |                 |                       |

| Section                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Test Item    | Limit           | Frequency Range (MHz) |
| FCC 15.247(b)(3)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Output Power | 1 watt or 30dBm | 2400-2483.5           |
| <p>1. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.</p> <p>2. Limit=30dBm – (Directional gain -6)dBi<br/>Directional gain = <math>10\log [(10^{G1/20} + 10^{G2/20})^2 / N_{ANT}] = 6.91 &gt; 6\text{dBi}</math>, where the <math>N_{ANT}</math> is the numbers of antenna. So, the power limit shall be reduced to <math>30 - (6.91-6) = 29.09 \text{ dBm}</math></p> |              |                 |                       |

#### TEST PROCEDURE

Place the EUT on the table and set it in the transmitting mode.  
Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the Power sensor.  
Measure the power of each channel.  
AVG Detector use for AVG result.

#### TEST SETUP

## RESULTS

| Test Mode | Test Antenna | Test Channel | Maximum Average Conducted Output Power (dBm) | Result |
|-----------|--------------|--------------|----------------------------------------------|--------|
| 11B       | Antenna 1    | LCH          | 14.26                                        | Pass   |
|           |              | MCH          | 14.11                                        | Pass   |
|           |              | HCH          | 15.40                                        | Pass   |
| 11G       | Antenna 1    | LCH          | 13.73                                        | Pass   |
|           |              | MCH          | 13.96                                        | Pass   |
|           |              | HCH          | 14.44                                        | Pass   |
| 11N20MIMO | Antenna 1    | LCH          | 12.90                                        | Pass   |
|           |              | MCH          | 12.73                                        | Pass   |
|           |              | HCH          | 13.14                                        | Pass   |
|           | Antenna 2    | LCH          | 14.22                                        | Pass   |
|           |              | MCH          | 13.67                                        | Pass   |
|           |              | HCH          | 13.67                                        | Pass   |
|           | Antenna 1+2  | LCH          | 16.62                                        | Pass   |
|           |              | MCH          | 16.24                                        | Pass   |
|           |              | HCH          | 16.42                                        | Pass   |
| 11N40MIMO | Antenna 1    | LCH          | 9.91                                         | Pass   |
|           |              | MCH          | 10.30                                        | Pass   |
|           |              | HCH          | 10.75                                        | Pass   |
|           | Antenna 2    | LCH          | 10.66                                        | Pass   |
|           |              | MCH          | 11.12                                        | Pass   |
|           |              | HCH          | 11.31                                        | Pass   |
|           | Antenna 1+2  | LCH          | 13.31                                        | Pass   |
|           |              | MCH          | 13.74                                        | Pass   |
|           |              | HCH          | 14.05                                        | Pass   |

Remark:

- 1) For all the test results has been adjusted the duty cycle factor.
- 2) For Correction Factor is refer to the result in section 7.1
- 3) For this product, it has two antennas, antenna1 and antenna2, but only the 802.11N HT20 and 802.11N HT40 modes can support both the SISO and MIMO technical. But for the modes of 11B & 11G, only the antenna 1 is working.
- 4) Through pre-testing all the test modes of 11N 20 and 11N40, including SISO and MIMO, but only the data if worse case is included in this test report.

## 7.4. POWER SPECTRAL DENSITY

### LIMITS

| FCC Part15 (15.247) Subpart C                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                        |                         |                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|-------------------------|-----------------------|
| Section                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Test Item              | Limit                   | Frequency Range (MHz) |
| FCC §15.247 (e)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Power Spectral Density | 8 dBm in any 3 kHz band | 2400-2483.5           |
| <p>1) If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.</p> <p>2) Limit=30dBm – (Directional gain -6)dBi<br/>           Directional gain = <math>10\log [(10^{G1/20} + 10^{G2/20})^2 / N_{ANT}] = 6.91 &gt; 6\text{dBi}</math>, where the <math>N_{ANT}</math> is the numbers of antenna. So, the power limit shall be reduced to <math>8 - (6.91 - 6) = 7.09\text{dBm}</math></p> |                        |                         |                       |

### TEST PROCEDURE

Refer to FCC KDB 558074, connect the UUT to the spectrum analyser and use the following settings:

|                  |                                                    |
|------------------|----------------------------------------------------|
| Center Frequency | The centre frequency of the channel under test     |
| Detector         | Peak                                               |
| RBW              | $3\text{ kHz} \leq \text{RBW} \leq 100\text{ kHz}$ |
| VBW              | $\geq 3 \times \text{RBW}$                         |
| Span             | $1.5 \times \text{DTS bandwidth}$                  |
| Trace            | Max hold                                           |
| Sweep time       | Auto couple.                                       |

Allow trace to fully stabilize and use the peak marker function to determine the maximum amplitude level within the RBW.

If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.

### TEST SETUP

## RESULTS

| Test Mode | Test Antenna | Test Channel | Maximum Peak power spectral density(dBm/30kHz) | Result |
|-----------|--------------|--------------|------------------------------------------------|--------|
| 11B       | Antenna 1    | LCH          | -0.70                                          | Pass   |
|           |              | MCH          | -0.76                                          | Pass   |
|           |              | HCH          | 0.59                                           | Pass   |
| 11G       | Antenna 1    | LCH          | -3.48                                          | Pass   |
|           |              | MCH          | -3.06                                          | Pass   |

## 7.5. CONDUCTED BANDEDGE AND SPURIOUS EMISSIONS

### LIMITS

| FCC Part15 (15.247) Subpart C |                                           |                                                                                                                         |
|-------------------------------|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| Section                       | Test Item                                 | Limit                                                                                                                   |
| FCC §15.247 (d)               | Conducted Bandedge and Spurious Emissions | At least 30 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power |

### TEST PROCEDURE

Refer to FCC KDB 558074, connect the UUT to the spectrum analyser and use the following

|                  |                                                |
|------------------|------------------------------------------------|
| Center Frequency | The centre frequency of the channel under test |
| Detector         | Peak                                           |
| RBW              | 100K                                           |
| VBW              | $\geq 3 \times \text{RBW}$                     |
| Span             | 1.5 x DTS bandwidth                            |
| Trace            | Max hold                                       |
| Sweep time       | Auto couple.                                   |

settings:

Use the peak marker function to determine the maximum PSD level.

|                    |                                                                               |
|--------------------|-------------------------------------------------------------------------------|
| Span               | Set the center frequency and span to encompass frequency range to be measured |
| Detector           | Peak                                                                          |
| RBW                | 100K                                                                          |
| VBW                | $\geq 3 \times \text{RBW}$                                                    |
| measurement points | $\geq \text{span}/\text{RBW}$                                                 |
| Trace              | Max hold                                                                      |
| Sweep time         | Auto couple.                                                                  |

Use the peak marker function to determine the maximum amplitude level.

### TEST SETUP

**Part I :Conducted Bandedge**

**RESULTS TABLE**

| Test Mode | Test Antenna | Test Channel | Carrier Power[dBm] | Max. Spurious Level [dBm] | Limit [dBm] | Verdict |
|-----------|--------------|--------------|--------------------|---------------------------|-------------|---------|
| 11B       | Antenna 1    | LCH          | 4.393              | -41.42                    | -25.61      | PASS    |
|           |              | HCH          | 5.685              | -41.17                    | -24.32      | PASS    |
| 11G       | Antenna 1    | LCH          | -0.579             | -41.83                    | -30.58      | PASS    |
|           |              | HCH          | 0.172              | -41.40                    | -29.83      | PASS    |
| 11N20MIMO | Antenna 1    | LCH          | -1.374             | -41.67                    | -31.37      | PASS    |
|           |              | HCH          | -0.792             | -41.26                    | -30.79      | PASS    |
|           | Antenna 2    | LCH          | 0.390              | -41.01                    | -29.61      | PASS    |
|           |              | HCH          | -0.208             | -40.34                    | -30.21      | PASS    |
| 11N40MIMO | Antenna 1    | LCH          | -7.403             | -42.09                    | -37.40      | PASS    |
|           |              | HCH          | -6.692             | -41.28                    | -36.69      | PASS    |
|           | Antenna 2    | LCH          | -6.472             | -41.99                    | -36.47      | PASS    |
|           |              | HCH          | -5.911             | -40.48                    | -35.91      | PASS    |

Remark:

- 1) For this product, it has two antennas, antenna1 and antenna2, but only the 802.11N HT20 and 802.11N HT40 modes can support both the SISO and MIMO technical. But for the modes of 11B & 11G, only the antenna 1 is working.
- 2) Through pre-testing all the test modes of 11N 20 and 11N40, including SISO and MIMO, but only the data if worse case is included in this test report.
