FCC Verification Test Report

Client Information:

Applicant:Skylo Technologies

Applicant add.:268, Lambert Avenue, Palo Alto, CA, 94306, USA

Manufacturer:VVDN Technologies Pvt. Ltd.

Manufacturer add.:D-22, Infocity-II, Sector 33, Gurgaon-122001, Haryana, India

Product Information:

Product Name:IoT Hub

Model No.:S-111 Mk I

Derivative Model No.:S-101 Mk I , S-121 MK I

Brand Name:Skylo Technologies

Applied Standard:

FCC Part25

Prepared By:

Abhinav Kumar

Abhinav Kumar

Laboratory Details:

AA Electro Magnetic Test Laboratory Private Limited

PlotNo174, Udyog Vihar-Phase4, Sector18, Gurgaon, Haryana, India

Date of Receipt: May 11, 2020

Date of Test: May 15-Sep. 04, 2020

Date of Issue: Sep. 04, 2020

Test Result: **In Compliance/Pass**

This device has been tested and found to comply with the stated standard(s), which is(are) required by the council directive of 2014/53/EU and indicated in the test report and are applicable only to the tested sample identified in the report.

Note: This report shall not be reproduced except in full, without the written approval of AA Electro Magnetic Test Laboratory Private Limited, this document may be altered or revised by AA Electro Magnetic Test Laboratory Private Limited, personal only, and shall be noted in the revision of the document. This test report must not be used by the client to claim product endorsement.

2 Test Summary

FCC Clause Requirements	Test Requirement	Result
25.204	Power Limits	PASS
25.202(f)	Emissions Mask	PASS
25.216	Emissions Limits for Mobile Earth Stations	PASS
25.202(d)	Frequency Tolerance	PASS
2.1049	Occupied Bandwidth	PASS

2.1 Measurement Uncertainty

The report uncertainty of measurement $y \pm U$, where expanded uncertainty U is based on a standard uncertainty Multiplied by a coverage factor of $k=2$, providing a level of confidence of approximately 95%.

No.	Item	Frequency Range	U , Value
3	Radiated Emission Test	1GHz~18GHz	2.80 dB

3 Test Facility

AA Electro Magnetic Test Laboratory is an ISO 17025:2017 certified lab by NABL, Certification No.TC-8597, CE Marking Certificate from Phoenix Germany #800058_00 and ILAC-MRA #0366. We are also accredited ISO17025:2017 by A2LA(American association for laboratory accreditation) #5593.OI ,FCC Recognized #137777, ISED recognized for wireless product #26046, VCCI(Japan) supporting member #4053..

3.1 Deviation from standard

None

3.2 Abnormalities from standard conditions

None

4 General Information

4.1 General Description of EUT

Manufacturer:	VVDN Technologies Pvt. Ltd.
Manufacturer Address:	D-22, Infocity-II, Sector 33, Gurgaon-122001, Haryana, India
EUT Name:	IoT Hub
Model No:	S-111 Mk I
Serial Model:	S-101 Mk I , S-121 MK I
Serial Number:	N/A
Brand Name:	Skylo Technologies
Operating Frequency:	1626.5-1660.5MHz
Channels:	N/A
Modulation:	SC-FDMA
H/W No.:	901-1-00624 (Rev B1)
S/W No.:	1.4.1
Power Supply Range:	Input : 9-36VDC, 2.5A Adapter: Input: 100-240VAC, 50/60Hz Output: 24VDC
Battery:	3.7V / 12000mAh

4.2 EUT Test Mode

Mode1	The EUT in full transmitting Mode.
-------	------------------------------------

4.3 Description of Test setup

EUT was tested in normal configuration (Please See following Block diagrams)

1. Block diagram of EUT configuration

6 Test and Measurement Data

All test and measurement data shown were performed in accordance with FCC Rules and Regulations, Volume II; Part 2 and the following individual parts: FCC 25 Satellite Communications.

Prior to testing the EUT was tuned up in accordance with the manufacturer's alignment procedures. All external gain controls were maintained at the position of maximum and/or optimum gain throughout the testing.

Measurement results, unless otherwise noted, are worst case measurement.

6.1 Power Limits

Test Procedure:

The EUT was connected to a Spectrum Analyzer. Cable losses were input into the analyzer as a reference level offset to ensure accurate measurements were obtained. The EIRP is a summation of conducted power and the antenna gain.

Test Setup

Tuned Frequency (MHz)	Output power (dBm)	Antenna Gain (dBi)	Cable Loss (dB)	EIRP OUTPUT POWER (dBm)	Limit
1654.8	27.01	8	1	34.01	No Limit For Mobile Earth Station

Note: e.i.r.p = conducted power + antenna gain – cable loss

1. Antenna Gain = 8 dBi.

6.2 Emissions Limitations

Test Setup

Test Specification

EUT was placed upon a Polyester Fibre top test table which was placed on the turn table 0.8m above the horizontal metal ground plane, and operating in the mode as mentioned above. A receiving antenna was placed 3m away from the EUT. During testing, turn around the turn table and move the antenna from 1m to 4m to find the maximum field-strength reading. All peripherals were placed at a distance of 10cm between each other. Both horizontal and vertical antenna polarities were tested.

6.3 Occupied Bandwidth

Test Procedure:

The EUT was connected directly to a spectrum analyzer. The occupied bandwidth of the modulated output was measured and plotted. Attenuator and cable losses were input into the analyzer as a reference level offset to ensure accurate measurements were obtained. ANSI C63.26 2015 section 5.4.4 was followed to obtain results.

Note: There is no requirement for occupied bandwidth in Part 25 for Mobile Earth Stations. However, the emissions masks are based upon the occupied bandwidth. This information is reported for reference only.

Test Results

Tuned Frequency (MHz)	Measured Bandwidth (KHz)
1654.8	131.54

Date: 6.JUL.2020 10:43:37

6.4 Emissions Mask

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the EUT met the requirements for emission mask. Attenuator and cable losses were input into the analyzer as a reference level offset to ensure accurate measurements were obtained.

Test Setup

Tuned Frequency (MHz)	Result
1654.8	PASS

Date: 4.SEP.2020 07:52:33

6.5 Frequency Tolerance

Test Procedure

The EUT was placed inside an environmental test chamber, and connected to a spectrum analyzer. The span and RBW was adjusted for narrowband operation to ensure an accurate measurement of the Modulated signal. The temperature was varied from – 30 to +50°C in 10°C increments. After a 30-minute soak time the output frequency was measured. At 20°C the voltage was varied +/- 15% from the nominal voltage.

Test Setup

Frequency versus Temperature
