1.6 Worst-Case Configuration and Mode

All RF tests were performed with the EUT transmitting at Power Level 5. During RF measurements the EUT was powered and controlled from a computer connected by USB.

Most measurements were performed at all bandwidths, some tests were performed only on 800 kHz. It was checked that the output power was similar for all bandwidths.

Power Line Conducted Emissions were performed by the EUT powered from the supplied USB Power Adaptor. The EUT transmits bursts on 3 channels when connected to the adaptor.

1.7 Comments

The measurements were done with the EUT powered from the microUSB connector.

2 TEST REPORT SUMMARY

2.1 General

All measurements are traceable to national standards.

The tests were conducted for demonstrating compliance with FCC CFR 47 Part 15, paragraph 15.247 and Industry Canada RSS-247 Issue 2 and RSS-GEN Issue 5.

Tests were performed in accordance with ANSI C63.4-2014 and ANSI C63.10-2013.

Radiated tests were made in a semi-anechoic chamber at measuring distances of 1m, 3m and 10m.

A description of the test facility is on file with FCC and ISED.

6 BLOCK DIAGRAM

6.1 Power Line Conducted Emission

6.2 Test Site Radiated Emission

This test setup is used for all radiated emissions tests. For frequencies below 30 MHz the measuring distance is 10m, for all other frequencies it is 3m or 1m. Emissions above 1 GHz are measured with a Spectrum Analyzer and Horn Antenna. For measurements above 18 GHz the test receiver is moved inside the anechoic chamber and located next to the antenna to minimize the cable loss. All measurements at 1GHz and above were performed with turntable height 1.5m and with the ground plane covered by absorbers. A pre-amplifier is used for all measurements above 30 MHz, and High-Pass or Band-Pass filter is used for all harmonics.
