

EXHIBIT 3 - EUT INTERNAL PHOTOGRAPHS

EUT Housing and Board View 1	 A photograph showing the disassembled components of an Electronic Under Test (EUT). The components include a white plastic housing, a green printed circuit board (PCB) with various electronic components, and a small black component. The components are laid out on a blue surface next to a black ruler with white markings in millimeters. The ruler is oriented vertically, with the 0 mm mark at the top and the 100 mm mark at the bottom.
Solder Board-Component View 1	 A photograph showing a close-up view of a solder board component. The component is a green PCB with various electronic components, including a black integrated circuit (IC) and a small black component. The component is laid out on a blue surface next to a black ruler with white markings in millimeters. The ruler is oriented vertically, with the 0 mm mark at the top and the 100 mm mark at the bottom.

Solder Board-Component View 2	 A photograph of a small green printed circuit board (PCB) component. The component is rectangular with several surface-mounted components, including what appears to be a microcontroller or IC, and various passive components like resistors and capacitors. It is placed on a blue textured surface next to a black ruler with white markings. The ruler shows dimensions in millimeters, with the component spanning approximately 20mm in width and 15mm in height.
Solder Board-Component View 3	 A photograph of a cylindrical component, likely a sensor or actuator, with a white label. The label contains text in Chinese and English, including "016 20-10-248" and "016 20-10-248". A multi-colored cable (red, yellow, green, blue, black) is attached to the component. It is placed on a blue textured surface next to a black ruler with white markings. The ruler shows dimensions in millimeters, with the component spanning approximately 20mm in width and 15mm in height.

Solder Board-Component View 4	 A photograph of a small, circular electronic component with a central pin and two mounting holes. It is connected to a four-wire ribbon cable (red, yellow, blue, and black) which ends in a white connector. The component is placed on a blue textured surface next to a black ruler with white markings in millimeters. The ruler shows dimensions from 0 to 100 mm.
Solder Board-Component View 5	 A photograph of a circular printed circuit board (PCB) with a central circular cutout. The board is populated with several surface-mount components, including resistors and capacitors, and a green push-button. It is placed on a blue textured surface next to a black ruler with white markings in millimeters. The ruler shows dimensions from 0 to 100 mm.

Solder Board-Component View 8	 A photograph of a small, square, black printed circuit board (PCB) component. The board is populated with various electronic components, including a central square chip with a green square in the center, several smaller chips, and numerous surface-mount components. The board is placed on a blue textured surface. A black ruler with white markings is positioned vertically to the left of the board, showing measurements from 0 to 100 mm. Another black ruler with white markings is positioned horizontally below the board, also showing measurements from 0 to 100 mm.
Antenna View	 A photograph of a small, green printed circuit board (PCB) component. The board is populated with various electronic components, including a central chip and several smaller components. A thin, white, flexible antenna wire is connected to the board. The board is placed on a blue textured surface. A black ruler with white markings is positioned vertically to the left of the board, showing measurements from 0 to 100 mm. Another black ruler with white markings is positioned horizontally below the board, also showing measurements from 0 to 100 mm. A red box labeled "WIFI Antenna" is positioned above the antenna wire, with a red line pointing to the antenna wire.
