This image shows a close-up of the internal components of a GE power supply unit. The main components are mounted on a green printed circuit board (PCB). Two large, cylindrical electrolytic capacitors are visible, one on the left and one on the right, both labeled '1000µF 50V'. In the center, there is a large, rectangular transformer with a green core. The PCB is populated with various other components, including resistors, diodes, and smaller capacitors. The GE logo is visible in the bottom right corner of the image.
