To whom it may concern:

Tonal Systems Inc. hereby requests a Permissive Change Class II of the radio equipment certification for the Tonal 2 certification number, FCC ID: 2AXL7-0007. This product differs from the originally approved product in the following manner:

- (a) Associated digital circuitry. – No Changes have been done to the RF digital circuitry.
- (b) Functional capabilities. – Only one change is made to functional capabilities. Through field firmware update, we enable MIMO which wasn't tested in original application due to limited time. Current product only uses Channel 0 for WIFI. After PCII certification we will release firmware update to enable WIFI MIMO mode.
- (c) Antenna Characteristics. – No Changes have been made to the Antenna Characteristics.
- (d) Cosmetic differences – No Changes have been made to the Cosmetics.

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type.

Sincerely,

Jason Goulden
VP Hardware
Tonal Systems Inc.
