Q & A

Question: When connected in 2.4G wireless mode, the mouse sometimes lags. How can I fix it?

Answer: Check the following:
 1. Ensure the USB Nano receiver is connected to the adaptor and the USB Type-C Cable is properly plugged in.
 2. Make sure the wireless environment is within 30-100 cm, without obstacles or metal objects.
 3. Ensure there are no strong wireless routers or other interference sources within 100 cm.

Q & A

Question: Will other wireless devices at home cause interference with my mouse?

Answer: This mouse features advanced anti-interference technology:
 1. Excellent interference resistance, transmitting four times within 1m (conventional products transmit once).
 2. Intelligent frequency hopping to dynamically adjust power (0-6dB), reducing the need for hopping (conventional devices have fixed power).
 3. The USB anti-interference extension cable creates a clean wireless environment (reducing metal and obstructive attenuation).
