7. Charging

Handsfree 1 supports four charging methods: AC, solar, car, and generator.

Attention

- Double-check that all cables are firmly plugged in.
- Avoid getting the plug and socket wet to prevent any potential damage.

7.1 AC Charging

Plug the Handsfree 1 into a standard wall outlet and start charging. Once fully charged, the Handsfree 1 automatically stops charging to prevent overcharging and shuts down after one minute of inactivity. For a fast charge, you can enable Turbo Charging in the BLUETTI app, which allows for an 80% capacity in just 45 minutes at an ambient temperature of 25°C (77°F).

Note: Do not plug the unit's AC charging cable into its own AC outlets. Doing so could damage the connected device.

7.2 Solar Charging

Connect the solar panels (in series or parallel) to Handsfree 1 via the solar charging cable. Once fully charged, the Handsfree 1 automatically stops charging to prevent overcharging and shuts down after one minute of inactivity. When receiving a continuous input of 200W, the Handsfree 1 will automatically stop charging within 1.6 hours. However, please be aware that the charging time may vary based on weather conditions, sunlight intensity, panel orientation, and other variables.

Note: Make sure your solar panel(s) meet the following requirements:

Voc: 12V-28V Current: 8.2A Power: 200W

7.3 Car Charging

Connect the Handsfree 1 to the vehicle's 12V / 24V cigarette lighter port via the car charging cable. Once fully charged, the Handsfree 1 automatically stops charging to prevent overcharging and shuts down after one minute of inactivity. It can charge at a maximum of 96W with a 12V port and 192W with a 24V port.

Note: Make sure your vehicle meets the following conditions for charging:

- The vehicle is capable of supplying power.
- The vehicle's engine is running during the charging process.

Notice:

The Handsfree 1 has a low-voltage disconnect function designed to protect your vehicle's battery during charging. When the car battery is low, the unit will automatically stop charging to prevent over-discharging and potential damage to the battery.

7.4 Generator Charging

Connect the Handsfree 1 to a generator via the AC charging cable. Once fully charged, the Handsfree 1 automatically stops charging to prevent overcharging and shuts down after one minute of inactivity. It takes approximately 1.5 hours to reach a full charge at an ambient temperature of 25°C (77°F) if the generator output is stable.

Note:

- Make sure your generator delivers the AC output with charging voltage and frequency that meet Handsfree 1's specifications.
- If the total power demand of your connected devices exceeds the generator's output capacity, please turn on the Grid Self-adaption Mode to ensure a seamless charging experience.
- To switch charging voltage and frequency, and enable the Grid Self-adaption Mode, please refer to *《Handsfree 1 BLUETTI App User Manual》*.

Appx. 1 Estimating Operation Time

Operation time = Battery Capacity (Wh) x DoD x η ÷ (Load Power + Handsfree 1's self-consumption)

Note:

DoD refers to the depth of discharge. Handsfree 1 works at 90% DoD for longer battery life.

η is the conversion efficiency of the inverter, typically over 85% for Handsfree 1.

The self-consumption of Handsfree 1 is approximately 6W.

E.g. If you have a 40W refrigerator, you can run it for about 4.4 hours.

Operation time = 268.8Wh × 90% × 85% ÷ (40W + 6W) ≈ 4.4 hours.

Notice:

Please keep in mind that the estimated operation time provided is for reference purposes and may vary based on actual usage conditions. Factors such as low temperature and excessive loads can significantly affect the battery capacity, leading to a reduction in the average operation time.

Appx. 2 FAQs

Q1: How do I know whether my devices will work well with this product?

A: Please evaluate the total constant load of your devices. If it doesn't exceed the Max. output power of Handsfree 1 (300W), you can use this power station to run your devices.

Note: Some devices with built-in motors or compressors may start at 2-4 times the rated power, which can easily overload the Handsfree 1.

Q2: Can I use third-party solar panels to charge this product?

A: Yes, you can. However, make sure your solar panels have an open circuit voltage of 12V-28V and are equipped with MC4 connectors. It's also important not to mix different types of solar panels.

Q3: Can it charge and discharge at the same time?

A: Yes. It supports pass-through charging. The Handsfree 1 comes with the premium LiFePO₄ battery and proprietary Battery Management System to ensure that it can charge and discharge at the same time.

Q4: Why is the charging power often too low?

A: Handsfree 1 has a built-in intelligent BMS that automatically adjusts the charging power in response to the battery temperature and SoC, thus protecting the battery and extending its service life.

Q5: What should I do if the unit's battery level shows an abnormality?

A: Fully discharge the battery, then charge it to full without any devices connected. This will recalibrate the battery's State of Charge (SoC).

Appx. 3 Grounding Guidelines

Only use the grounding terminal when the Handsfree 1 is connected to the home grid using a 2-pin cable, or if the wall outlet's grounding is ineffective, and the connected device features a metal case.

Use a cable with OT terminals for grounding. Connect one end to the grounding terminal with a grounding screw and the other end to the wall outlet or home distribution box ground.

The grounding terminal is unnecessary in the following scenarios.

- When connecting the Handsfree 1 to the wall outlet with a 3-pin cable, it's already grounded effectively.

- When the Handsfree 1 is not connected to the grid, touching its case won't cause an electrical shock.
