

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup*	 A photograph showing a conducted emission test setup. On the left, a piece of electronic equipment (likely a spectrum analyzer or noise meter) is connected via cables to a power supply unit on the floor. The power supply is connected to a laptop on the right, which is displaying a blue screen. The setup is on a wooden workbench.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A laptop is placed on a yellow foam block in the center of a room. The walls are covered with white, square-shaped electromagnetic shielding material. A metal frame structure is visible in the foreground, and the floor has yellow and black striped safety markings.

Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test setup for the 30MHz to 1GHz range. A yellow test chamber sits on a circular turntable in an anechoic chamber. A laptop is on top of the chamber, connected by a cable. The walls are covered with white square absorbers. A metal safety railing is on the right, and yellow and black striped safety lines are on the floor.
Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. A white test chamber sits on a yellow test chamber, which is on a circular turntable. A red horn antenna is positioned to the right. The walls are covered with white square absorbers, and blue pyramidal absorbers are on the floor.

**Radiation Emission Test
Setup (Above 18GHz)**

* Means' only test and setup for PART 15C .
