项目简介

1. Brief description of the project

Item Number of Antennas	machine type
1	flat
Machine shell material: plastic shell	

2. Antenna brief introduction

Antenna number	name	Working frequency band/MHZ	Material/Structure
1	WIFI&BT	2400MHZ/2500MHZ	FPC

antenna layout

WIFI&BT Antenna S11

BT antenna measured distance

Measured effect	
model number	1
test environment	Thorward R&D Center
Test Equipment	Huawei AM08
Test distance	15 meters y

Environmental Handling and Assembly Instructions

Environmental Handling and Assembly Instructions

[illegible]

Note: 1. This report is based on the actual debugging and testing of the debugging prototype, including environmental treatment, antenna position and assembly position of each device

cannot be changed at will;

2. If there is any change in the materials used in the prototype, it is necessary to timely feedback to our company for re-verification;

3. List of sensitive components:

TP (material, coating, wiring, etc.)

Screen (amplifying circuit, LED, cable design, etc.)

Shell material (antenna assembly method, structural interference, shell material, antenna position height and area, etc.)

Mainboard (mainboard conduction, RF circuit matching, PA, duplexer, filter, LNA, power circuit, etc.)

Camera, battery, motor, MIC, fingerprint recognition module, etc.

4. Due to the small number of debugging prototypes or only one, some probabilistic problems cannot be completely found. It is recommended to check the problem points in small batches before mass production (such as splash screen, noise from speakers, TP jump, black screen of death, signal diving, etc.)
