

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On a wooden workbench, there is a signal analyzer or spectrum analyzer connected to a power supply unit. A smartphone is placed on a separate wooden board to the right, likely for data logging or monitoring. The background is a plain wall with some electrical outlets.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A white, box-like device is placed on a turntable inside an anechoic chamber, which is lined with white and blue electromagnetic wave absorbers. A metal frame stands in front of the device, and the floor has yellow and black safety markings.

Radiation Emission Test Setup (30MHz to1GHz)	 A photograph showing the interior of an anechoic chamber. The walls are covered with white, square-shaped electromagnetic absorbers. In the center, a white, rectangular test fixture is mounted on a stand. Several vertical metal rods are visible in the foreground, likely part of a probe or antenna array.
Radiation Emission Test Setup (1GHz to18GHz)	 A photograph showing the interior of an anechoic chamber. The walls are covered with white, square-shaped electromagnetic absorbers. A white, rectangular test fixture is mounted on a stand. A red, curved object, possibly a probe or antenna, is visible in the foreground. The floor is marked with yellow lines.

**Radiation Emission
Test Setup (Above18GHz)**

* Means' only test and setup for PART 15C .
