

ABOUT NVR | NORTH VALLEY RESEARCH

North Valley Research (NVR) is a professional electronic control system and IoT service provider for off-road vehicles. Control systems are widely used in construction equipment, aerial work platform, agricultural machine, mining equipment and etc. NVR also provides telematics service to stakeholders such as fleet manager, rental company, OEM, financier, and etc. NVR now has operations in the China, USA and UK.

TBOX TX4000 Mars Platform

TBOX-TX4000 Mars platform is a multi-functional telematics terminal, with satellite positioning (support Beidou/GPS/GLONASS), CAN communication data acquisition, signal acquisition, control output and other functions, and built-in lithium battery, support no signal storage. It conforms to the Chinese emission standard T4 for Nonroad and T6 for onroad vehicles. All drives have a short-circuit protection function, and the controller can provide fault diagnosis; CAN bus can be connected with other bus devices to exchange data.

Key Features

Device Standby

Built-in high-capacity lithium battery for longer standby

Positioning

Precise positioning with GPS/BD/Base station positioning

Data Exchange

4G network to upload vehicle monitoring information in real time

Data Storage

Built-in mass storage for signalless data storage

External Antenna

For more stable signal

Online monitoring

Online vehicle status monitoring, remote fault diagnosis

Battery monitoring

Support battery voltage monitoring

Remote Lockup

Remote one-click lockup for abnormal usage

OTA

To keep updating device SW online

Main Configuration

- ▲ 32 bit automotive-grade processors
- ▲ 4G communication module
- ▲ Built-in lithium battery (600mAh/1800mAh Opt)
- ▲ 2 * Analog input
- ▲ High-speed data storage chip
- ▲ 1 * CAN interface
- ▲ Power over-voltage protection circuit
- ▲ 2 * digital input/output

Customized Part

- ▲ Input / Output number and type
- ▲ SW function like: Geo-Fence、SMS alarm、Hour statistics
- ▲ 2 * optional configurable Input / Output
- ▲ 1 * optional configurable communication interface
- ▲ Optional Accelerometer
- ▲ Optional Open Cover Detection
- ▲ Optional encryption module

Electrical Parameters

Rated Parameters

- Voltage: 9~36V
- Max Current: 30mA @ 24V DC
(Non charging)
150mA @ 24V DC
(Charging)
- Standby Current: <150uA
- Analog Input: Voltage: 0~36V
- Switch Input: High: 24V (2~24V)
Low: 0V (0~1V)
- Operation Temperature: -30~70°C
(Battery -20~50°C)
- Storage Temperature: -40~85°C

Environmental Parameters

- IP Rate: IP65
- Vibration Resistance: Random Vibration:
Execution Standard IEC 60068-2-64
- Impact Resistance: Mechanical shock:
Execution Standard IEC 60068-2-27
- Moisture resistance: IEC 60068-2-30
- Salt Spray: IEC 60068-2-52

Communication

- CAN 2.0 A/B
- CAN SAE J1939
- UART TTL

EMC Characteristics

- Radiation immunity: ISO 11452-2/-4
- Conduction immunity: ISO 7637-2
- ESD: ISO 10605
- Pulse group immunity: IEC 61000-4-4

Attention

This product can be used across EU member states.

RF exposure information: The Maximum Permissible Exposure(MPE) level has been calculated based on a distance of d=20cm between the device and the human body. To maintain compliance with RF exposure requirement, use product that maintain a 20cm distance between the device and human body.

FCC Statement

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help important announcement
