2.2 Additional Information

Equipment Class	NII – National Information Infrastructure	
Device Type	Stand-alone	
Operating Frequency	5 180 MHz ~ 5 240 MHz / 5 745 MHz ~ 5 825 MHz	
RF Output Power	802.11n(HT20)	14.04 dBm
	802.11n(HT40)	14.02 dBm
Number of Channel	802.11n(HT20)	9
	802.11n(HT40)	4
Modulation Type	OFDM	
Antenna Type	Dipole Antenna	
Antenna Gain	2.61 dBi	
Antenna Operating Mode	Single Antenna Equipment with only one antenna	

2.3 Mode of operation during the test

- The EUT is continuous transmission mode during the test with set to each of the Low Channel, Middle Channel, and High Channel at the worst case data rate. The worst case data rate for each modulation is determined 6.5 Mbps for HT20, 65 Mbps for HT40.

2.4 Modifications of EUT

- None

2.5 Reason of Additional Model Name

- Same electrical specifications, structure and circuit as the basic model.

2.6 Frequency/Channel Operations

- This device contains the following capabilities:
- 5 GHz WIFI: WLAN 802.11n(HT20/HT40)

§15.203	Antenna Requirement	☒	PASS

- Note1: 30M ~ 1GHz data of Radiated Emissions data is the worst case data.

3.2 Purpose of the test

- To determine whether the equipment under test fulfills the requirements of the standards stated in FCC Part 15 Subpart E Section 15.407.

3.3 Test Methodology

Both conducted and radiated testing was performed according to the procedures in ANSI C63.10: 2013.

Radiated testing was performed at a distance of 3 m from EUT to the antenna.

3.4 Configuration of Test System

3.4.1 Radiated emission test

Preliminary radiated emissions test were conducted using the procedure in ANSI C63.10: 2013 to determine the worse operating conditions. Final radiated emission tests were conducted at 3 m Semi Anechoic Chamber. The turntable was rotated through 360 degrees and the EUT was tested by positioned three orthogonal planes to obtain the highest reading on the field strength meter. Once maximum reading was determined, the search antenna was raised and lowered in both vertical and horizontal polarization.

3.4.2 AC power line conducted emission test

The EUT was connected to LISN. All supporting equipment were connected to another LISN. Preliminary Power line Conducted Emission test was performed by using the procedure in ANSI C63.10: 2013 to determine the worse operating conditions.

3.5 Antenna requirement

According to §15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section.

The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

And according to §15.247(b)(4), the conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi.

Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

3.5.1 Result: Pass

The transmitter has a **Dipole Antenna**. The directional gain of the antenna is **2.61 dBi**.

10.3 Test setup

The radiated emissions measurements were performed on the 3 m, Semi-Anechoic Chamber. The EUT was placed on a non-conductive turntable above the ground plane.

The frequency spectrum from 9 kHz to 26.5 GHz was scanned and maximum emission levels at each frequency recorded. The system was rotated 360°, and the antenna was varied in the height between 1.0 m and 4.0 m in order to determine the maximum emission levels. This procedure was performed for horizontal and vertical polarization of the receiving antenna.

11. Power Line Conducted Emission

11.1 Operating environment

Temperature : 24.5 °C

Relative humidity : 44.6 %

11.2 Measurement method

Standard : §15.207

11.3 Test setup

The EUT was placed on a wooden table, 0.8 m height above the floor. Power was fed to the EUT through a $50\ \Omega$ / $50\ \mu\text{H} + 5\ \Omega$ Artificial Mains Network (AMN). The ground plane was electrically bonded to the reference ground system and all power lines were filtered from ambient.

11.4 Test data

Operating mode : Transmit mode

Test Result : Pass
