To Whom it may concern

Declaration

The EchoCare's system, ECT-1310PC, is an indoor system that transmits a UWB signal in a Time-division duplexing (TDD) mode. The transmission duty cycle is 0.025.

That means, the system transmits the info for 670pSec (Transmission period). The information is transmitted every 40nSec.

The device receives information during the transmission off (i.e. during the following 40nSec).

Sincerely yours

Rafi Zack, CEO

A handwritten signature in blue ink that reads "Rafi Zack".
