3.Standing Wave Ratio(VSWR)test

3-1 Test settings

The VSWR test units are connected in turn: **E5071B** Network Analyzer → **50 ohm coaxial**

Cable → **156mm** long copper **tube** /b110> → **Test fixtures**. Processing of the test fixture: A hard cable is used from the antenna 50 ohm test point on the pcb of the mobile phone to lead out the SMA-J connector, connect it to the copper tube with a choke, and then connect the other devices in turn.

3-2 VSWR test

The following table shows the value of the standing wave ratio of the edge frequency point of the GSM+LTE antenna operating band, the return loss, VSWR, and the relevant waveform plot is shown in the annex:
