WIFI GNSS CHIP COMBO ANTENNA

1.0 SCOPE

This specification describes the antenna application and surrounding. The information in this document is for reference and benchmark purposes only.

Antenna illustrations in this document are generic representations. They are not intended to be an image of any antenna listed in the scope.

2.0 PRODUCT DESCRIPTION

2.1 PRODUCT NAME AND SERIES NUMBER (S)

Product name: WIFI GNSS chip combo antenna

Series Number: 2169420001

2.2 DESCRIPTION

216942 is a ceramic SMT/chip antenna simultaneously working at frequency bands of GNSS (1.561/1.575/1.601GHz) and WiFi (2.4/5.8GHz). It eliminates the need of putting two standalone antennas to support the two standards. It is compact size (3.2x1.6x1.2mm) and only needs a small keep-out space (8x6mm). Hence, 216942 is a perfect choice for those space constrained and cost sensitive applications, for example, wearable/portable devices, car black box, tracker, navigation devices, etc.

4.0 ANTENNA PERFORMANCE

4.1 RF TEST CONDITIONS

All measurements are done of the antenna mounted on a reference PCB (80*40*0.8mm) with VNA Agilent E5071C and Over-The-Air (OTA) chamber.

Input Impedance	VNA E5071C	50 ohms				

Note that the above antenna performance is measured with just the antenna mounted on a reference PCB to similar a free-space condition. When implement into the system, the frequency resonant might be off-tune due to the loading of surrounding components especially metal plane. This off-tune can be compensated through matching. Although module manufacturers specify a peak gain limit, it is based on free-space conditions. The peak gain will be degraded by 1 to 2dBi in the actual implementation as the radiation pattern will change due to the surround components. As such, during selection of antenna, you can select one with high peak gain to compensate for the loss. Molex can offer assistant to choose the best location and best tuning in-order to meet this peak gain requirement.

APPLICATION SPECIFICATION

6.0 RECOMMENDED REFLOW CONDITION

Recommended solder paste: ALPHA CAP-390 SAC305;

Recommended stencil thickness: $0.1\text{MM} \leq T \leq 0.15\text{MM}$;

For mechanically challenging applications. Molex recommends using surface mount glue (e.g. Loctite 3611) before reflow soldering process to ensure increased mechanical retention on the PCB.
