

Wireless mouse

Technical parameters

DPI:	1200	Rated working current	10mA
Radio frequency:	BT	Tracing system	optical
operating system	Windows and MAC OS	Maximum acceleration	14 inches per second

- 1.Turn on the Bluetooth function of the computer: Click on the notification area at the bottom right of the taskbar, select "All Settings" > "Devices" > "Bluetooth and Other Devices", and make sure the Bluetooth switch is turned on.
- 2.Search for mouse device: In the "Add Bluetooth or Other Devices" option, select "Bluetooth", and the computer will automatically search for nearby Bluetooth devices.
- 3.Connect the mouse: In the list of found devices, locate the name of the mouse device, click to connect, and wait for the pairing to complete

the matching USB cable.

This product adopts environmental protection and energy saving mode design:

1. The mouse does not need to sleep automatically for a few minutes to enter the powersaving state, just wake up and click the mouse (left/right button).
2. Wireless working distance: 10m (when there is more interference around, it will affect the use distance).

Matters needing attention:

- When using products, please try to stay away from strong interference sources and fire sources, such as microwave ovens and so on
- If the mouse is found to be dirty after a long time of use, a small amount of absolute alcohol can be used to wipe off the dirt, and the whole mouse cannot be cleaned in liquid;

FCC Caution.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

***RF warning for Portable device:**

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
