

Avoid
leaky toilets

Reduce water consumption

Discover leaking toilets and avoid a high water utility bill while helping to take care of water reserves

The Aguardio toilet sensor is a clamp-on **plug & play** solution, installed in literally minutes fixed with strips on water inlet to the toilet

The Aguardio toilet sensor is cable of detecting leaking toilets down to **4/L per hour**

The Aguardio toilet sensor can communicate with Aguardio G2 via Bluetooth, which means that the building owner will receive a **notification** when a toilet is leaking

The Aguardio toilet sensor can collect **data** on how often a toilet is used which can optimize cleaning routines

10 year battery life with the opportunity of recycling electronics

The problem

Leaky toilets are one of the most common causes of unexpected high water use.

A leaky toilet wastes between 200 and 400 litres of water per day – that's a jaw dropping 72,000 to 146,000 litres of water wasted every year – from just one leaking toilet.

When a toilet is leaking, water dribbles away down the back of the pan, which means a leaky loo often goes unnoticed.
