

# AFC DUT TEST HARNESS REPORT

**FCC ID** : 2BCGWBE65V2

**Equipment** : BE11000 Whole Home Mesh Wi-Fi 7 System

**Brand Name** : tp-link

**Model Name** : Deco BE65, Deco BE63, Deco BE11000, Deco BE65 Pro

**Applicant** : TP-LINK CORPORATION PTE.LTD.  
7 Temasek Boulevard #29-03 Suntec Tower One,  
Singapore 038987

**Manufacturer** : TP-LINK CORPORATION PTE.LTD.  
7 Temasek Boulevard #29-03 Suntec Tower One,  
Singapore 038987

**Standard** : 47 CFR FCC Part 15.407

The product was received on Jul. 31, 2024, and testing was started from Sep. 19, 2024 and completed on Oct. 16, 2024. We, Sporton International Inc. Hsinchu Laboratory, would like to declare that the tested sample has been evaluated in accordance with the procedures given in AFC Device (AFC DUT) Compliance Test Plan Version 1.7 and shown compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of Sporton International Inc. Hsinchu Laboratory, the test report shall not be reproduced except in full.

Approved by: Sam Chen

**Conformity Assessment Condition:**

1. The test results (PASS/FAIL) with all measurement uncertainty excluded are presented against the regulation limits or in accordance with the requirements stipulated by the applicant/manufacture who shall bear all the risks of non-compliance that may potentially occur if measurement uncertainty is taken into account.
2. The measurement uncertainty please refer to each test result in the chapter "Measurement Uncertainty".

**Disclaimer:**

The product specifications of the EUT presented in the test report that may affect the test assessments are declared by the manufacturer who shall take full responsibility for the authenticity.

## 1.2 Antenna Information

| Ant. | Port   |      |      | Brand   | Model Name | Ant. Type | Connector | Gain (dBi) |
|------|--------|------|------|---------|------------|-----------|-----------|------------|
|      | 2.4GHz | 5GHz | 6GHz |         |            |           |           |            |
| 1    | -      | -    | -    | TP-Link | Deco BE63  | Dipole    | I-PEX     | Note 1     |
| 2    | -      | -    | 2    | TP-Link | Deco BE63  | Franklin  | I-PEX     |            |
| 3    | -      | -    | -    | TP-Link | Deco BE63  | Dipole    | I-PEX     |            |
| 4    | -      | -    | 1    | TP-Link | Deco BE63  | Franklin  | I-PEX     |            |

Note 1

| Ant. | Gain (dBi) |                 |                 |
|------|------------|-----------------|-----------------|
|      | 2.4GHz     | 5GHz            | 6GHz            |
|      |            | UNII 1 ~ UNII 3 | UNII 5 ~ UNII 8 |
| 1    | 1.98       | 3.00            | -               |
| 2    | -          | -               | 3.00            |
| 3    | 1.85       | 3.00            | -               |
| 4    | -          | -               | 3.00            |

Note 2: The above information was declared by manufacturer.

Note 3: Directional gain information

| Type   | Maximum Output Power                                                                                                                                | Power Spectral Density                                                                                                                   |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Non-BF | Directional gain = Max.gain + array gain.<br>For power measurements on IEEE 802.11 devices<br>Array Gain = 0 dB (i.e., no array gain) for N ANT ≤ 4 | $Directional\ IGain = 10 \cdot \log \left[ \frac{\sum_{j=1}^{N_{ANT}} \left\{ \sum_{k=1}^{N_{ANT}} g_{j,k} \right\}^2}{N_{ANT}} \right]$ |
| BF     | $Directional\ IGain = 10 \cdot \log \left[ \frac{\sum_{j=1}^{N_{ANT}} \left\{ \sum_{k=1}^{N_{ANT}} g_{j,k} \right\}^2}{N_{ANT}} \right]$            | $Directional\ IGain = 10 \cdot \log \left[ \frac{\sum_{j=1}^{N_{ANT}} \left\{ \sum_{k=1}^{N_{ANT}} g_{j,k} \right\}^2}{N_{ANT}} \right]$ |

Ex.

Directional Gain (NSS1) formula :

$$Directional\ IGain = 10 \cdot \log \left[ \frac{\sum_{j=1}^{N_{ANT}} \left\{ \sum_{k=1}^{N_{ANT}} g_{j,k} \right\}^2}{N_{ANT}} \right]$$

$$NSS1(g1,1) = 10^{G1/20} ; NSS1(g1,2) = 10^{G2/20} ; NSS1(g1,3) = 10^{G3/20} ; NSS1(g1,4) = 10^{G4/20}$$

$$g_{j,k} = (NSS1(g1,1) + NSS1(g1,2) + NSS1(g1,3) + NSS1(g1,4))^2$$

$$DG = 10 \log[(NSS1(g1,1) + NSS1(g1,2) + NSS1(g1,3) + NSS1(g1,4))^2 / N_{ANT}] \Rightarrow 10$$

$$\log[(10^{G1/20} + 10^{G2/20} + 10^{G3/20} + 10^{G4/20})^2 / N_{ANT}]$$

Where ;

$$6G\ UNII-5 / 7\ G1 = 3.0\ dBi; G2 = 3.0\ dBi;$$

$$6G\ UNII-5 / 7\ DG = 6.01\ dBi$$

Note 4

**For 2.4GHz function:**

**For IEEE 802.11 b/g/n/VHT/be (2TX/2RX):**

Port 1 and Port 2 can be used as transmitting/receiving antenna.

Port 1 and Port 2 could transmit/receive simultaneously.

**For 5GHz function:**

**For IEEE 802.11a/n/ac/ax/be (2TX/2RX):**

Port 1 and Port 2 can be used as transmitting/receiving antenna.

Port 1 and Port 2 could transmit/receive simultaneously.

**For 6GHz function:**

**For IEEE 802.11ax/be (2TX/2RX):**

Port 1 and Port 2 can be used as transmitting/receiving antenna.

Port 1 and Port 2 could transmit/receive simultaneously.

### 1.3 Table for EUT supports function

| Function  |
|-----------|
| AP Router |
| Mesh      |

Note: The above information was declared by manufacturer.

### 1.4 Table for Multiple Listing

| Model Name                                        | Description                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Deco BE65, Deco BE63, Deco BE11000, Deco BE65 Pro | <p>a) The Deco BE63 and Deco BE11000 is exactly the same as the Deco BE65 except for the model.</p> <p>b) The Deco BE65 Pro has the different USB port, PHY/Switch solutions and the power for FEM from the Deco BE65, but the RF curcirt (including the schematic, layout, antenna, antenna position and RF parameters) is exactly the same as the Deco BE65.</p> |

Note 1: From the above models, model: Deco BE65 was selected as representative model for the test and its data was recorded in this report.

Note 2: The above information was declared by manufacturer.

### 1.5 Accessories

| Adapter                           | tp-link    | T120250-2B4 | INPUT: 100-240V~50/60Hz, 0.8A<br>OUTPUT: 12V, 2.5A |
| Other                             |            |             |                                                    |
| RJ-45 cable*1: Non-shielded, 1.2m |            |             |                                                    |

## 1.6 Support Equipment

| Support Equipment |             |            |            |              |
|-------------------|-------------|------------|------------|--------------|
| No.               | Equipment   | Brand Name | Model Name | FCC ID       |
| A                 | Notebook    | DELL       | E4300      | N/A          |
| B                 | Notebook    | DELL       | E4300      | N/A          |
| C                 | WLAN module | Qualcomm   | QCNCM865   | J9C-QCNCM865 |

## 1.7 Applicable Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- ♦ 47 CFR FCC Part 15.407

The following reference test guidance is not within the scope of accreditation of TAF.

- ♦ AFC Device (AFC DUT) Compliance Test Plan Version 1.7
- ♦ FCC KDB 987594 D05 v01r01

## 2 Measurement Environment

| Measurement Environment Information |            |
|-------------------------------------|------------|
| AFC DUT Test Harness version        | 2.0.65.184 |

### 2.1 AFCD General Capabilities Declaration

| Item | Question                                                                                                                        | Vendor Response |
|------|---------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 1    | AFC DUT Type                                                                                                                    | Standalone AP   |
| 2    | Does the AFC DUT supports sending an Available Spectrum Inquiry Request based on the inquired Frequency Range field?            | Yes             |
| 3    | Does the AFC DUT supports sending an Available Spectrum Inquiry Request based on the inquired Channels fields?                  | Yes             |
| 4    | If the Answer to Items 2 and 3 is "Yes", what is AFC DUT's default inquiry type?                                                | Both            |
| 5    | Does the AFC DUT need to be supplied with BSS configuration parameters?                                                         | No              |
| 6    | Does the AFC DUT manufacturer attest to AFC DUT compliance with rules for LPI operation?                                        | Yes             |
| 7    | Does the AFC DUT need to be supplied with mandatory registration information to formulate an Available Spectrum Inquiry Request | No              |
| 8    | If the Answer to Item 7 is "Yes". What is the geographic Supported by the AFC DUT?                                              | N/A             |
| 9    | Does the AFC DUT supports 160 MHz channel width operation?                                                                      | Yes             |
| 10   | Which method does AFC DUT acting as a Fixed Client uses for sending an Available Spectrum Inquiry Request?                      | N/A             |
| 11   | Does the AFC DUT supports 320 MHz channel width operation?                                                                      | Yes             |

Note: The above information was declared by manufacturer.

## 2.2 Test Configuration

### Fixed Client Device Test Setup

### 3 Protocol Test Results

#### 3.1 Successful Registration and Spectrum Access Request

##### 3.1.1 Test Procedure

| Step | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 15   | AFC DUT sends a valid Available Spectrum Inquiry Request containing the inquiredFrequencyRange and/or the inquiredChannels fields*                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 16   | AFC DUT Test Harness validates the presence of mandatory registration information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 17   | AFC DUT Test Harness sends an Available Spectrum Inquiry Response containing a list of available frequency ranges and/or channels and the maximum permissible transmit power in the availableFrequencyInfo and/or availableChannelInfo fields.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|    |                                                                                                                                                                                                                                                                                               |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18 | If AFC DUT used Out-of-band method, initiate connection procedure between AFC DUT and SP Access Point by following instructions provided by the AFC DUT Vendor                                                                                                                                |
| 19 | Wait for 60 seconds                                                                                                                                                                                                                                                                           |
| 20 | RF Test Equipment monitors any transmission by the AFC DUT conforms to the conditions contained in the Available Spectrum Inquiry Response and does not exceed emissions limits in adjacent frequencies                                                                                       |
| 21 | Trigger the AFC DUT to send to the AFC DUT Test Harness an Available Spectrum Inquiry Request using either In-band or Out-of-band methods                                                                                                                                                     |
| 22 | AFC DUT sends a valid Available Spectrum Inquiry Request containing the inquiredFrequencyRange and/or the inquiredChannels fields*                                                                                                                                                            |
| 23 | AFC DUT Test Harness validates the presence of mandatory registration information                                                                                                                                                                                                             |
| 24 | AFC DUT Test Harness sends an Available Spectrum Inquiry Response containing a list of available frequency ranges and/or channels and the maximum permissible transmit power in the availableFrequencyInfo and/or availableChannelInfo fields which are significantly different from Step 17. |
| 25 | If AFC DUT used Out-of-band method, initiate connection procedure between AFC DUT and SP Access Point by following instructions provided by the AFC DUT Vendor                                                                                                                                |
|    | Wait for 60 seconds (configurable)                                                                                                                                                                                                                                                            |
|    | RF Test Equipment monitors any transmission by the AFC DUT conforms to the conditions contained in the latest Available Spectrum Inquiry Response and does not exceed emissions limits in adjacent frequencies                                                                                |

### 3.1.2 Test Result

Refer as Appendix A~C

## 3.2 Unsuccessful Spectrum Access Request

### 3.2.1 Test Procedure

| Step | Description                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | If the AFC DUT is Standard Power Access Point, go to Step 2, else go to Step 7                                                                                                                                                                                                                                                                                                                                                                   |
| 2    | AFC DUT set to Initial Pre-test State.<br>If needed (see Table 9 declaration), configure the AFC DUT with BSS parameters per Table 14 and a temporary test regulatory identifier (e.g., FCC ID), geographic coordinates, antenna height, and uncertainty parameters.<br>Configure the AFC DUT with AFC System URL and server root certificate.<br>Trigger the AFC DUT to send to the AFC DUT Test Harness an Available Spectrum Inquiry Request. |
| 3    | AFC DUT sends a valid Available Spectrum Inquiry Request containing the inquiredFrequencyRange and/or the inquiredChannels fields*.                                                                                                                                                                                                                                                                                                              |
| 4    | AFC DUT Test Harness validates mandatory registration information.                                                                                                                                                                                                                                                                                                                                                                               |
| 5    | AFC DUT Test Harness sends an Available Spectrum Inquiry Response indicating that no frequency ranges and/or channels are available.                                                                                                                                                                                                                                                                                                             |
| 6    | Throughout Step 2 to Step 5 and subsequent to Step 5, RF Test Equipment monitors the output of the AFC DUT to confirm the following: <ul style="list-style-type: none"><li>• For SP only operation, AFC DUT does not transmit in the band.</li><li>• For AFC DUT whose manufacturer attests to its compliance with rules for LPI operation, the AFC DUT does not transmit above LPI limits.</li></ul>                                            |
| 7    | If the AFC DUT is Fixed Client, go to Step 8 else Stop the test                                                                                                                                                                                                                                                                                                                                                                                  |
| 8    | The AFC DUT set to Initial Pre-test State.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 9    | If needed (see Table 9 declaration), configure the AFC DUT with a temporary test regulatory identifier (e.g., FCC ID or IC ID), geographic coordinates, antenna height, and uncertainty parameters.<br>Configure the AFC DUT with AFC System URL and server root certificate.<br>Trigger the AFC DUT to send to the AFC DUT Test Harness an Available Spectrum Inquiry Request.                                                                  |
| 10   | AFC DUT sends a valid Available Spectrum Inquiry Request containing the inquiredFrequencyRange and/or the inquiredChannels fields*.                                                                                                                                                                                                                                                                                                              |
| 11   | AFC DUT Test Harness validates mandatory registration information.                                                                                                                                                                                                                                                                                                                                                                               |
| 12   | AFC DUT Test Harness sends an Available Spectrum Inquiry Response indicating that no frequency ranges and/or channels are available using either In-band or Out-of-band methods.                                                                                                                                                                                                                                                                 |
| 13   | If AFC DUT used Out-of-band method, initiate connection procedure between Fixed Client and SP Access Point by following instructions provided by the AFC DUT Vendor                                                                                                                                                                                                                                                                              |
| 13   | Wait for 60 seconds<br>RF Test Equipment monitors that the AFC DUT does not transmit above maximum transmit power limits advertised by the Standard Power Access Point for Standard Client Devices in the channel.                                                                                                                                                                                                                               |
