

Declaration about the 5gwifi feature of the product module not being enabled

To relevant regulatory agencies/partners/users:

The GNSS Receiver (product model: SE Lite) produced/sold by our company (GUANGZHOU STAR INFORMATION TECHNOLOGY CO.,LTD) is equipped with a wireless communication module (module model: FC20, FCC ID: XMR201703FC20) with BT/2.4GWIFI/5G WiFi functions in its hardware design.

To meet the actual usage needs and design planning of the product, the 5G WiFi (5GHz wireless LAN) function of the wireless module has been permanently disabled at the software level. The specific instructions are as follows:

1. The firmware/software of this product does not integrate any drivers or application interfaces for 5G WiFi functionality;
2. During production testing and factory settings, the RF transmission and reception functions of the 5G WiFi frequency band have been disabled for this product;
3. End users are unable to enable the 5G WiFi function through any operation (including but not limited to settings, flashing, external devices, etc.);
4. During the actual use of this product, only the BT/2.4G WiFi function of the wireless module is enabled and used, and there is no signal transmission or data transmission behavior in the 5G WiFi frequency band.

Our company promises that the above statement is true, accurate, and complete. If there is any falsehood, our company is willing to bear all legal responsibilities arising therefrom.

Hereby declared!
