

Antenna Specification

Test Condition

- ATM610 PCB Printed Antenna
- Test Chamber : SJIT OTA Chamber
- (Address : IoT R&D Center, 54-11, Dongtanhana 1-gil, Hwaseong-si, Gyeonggi-do, 18423 KOREA)
- Network Analyzer : Return Loss
- 3D Passive Chamber : Gain and Efficiency
- Measured by Sungkwon Park 2024/07/01

Test Environment

Antenna Gain Measurement Procedure and Software

The KSS Software is used to test antenna gain in the far field 3D OTA chamber.

The overview of the far field 3D OTA chamber is shown in Fig.1 and the antenna turntable rotation sampling is shown in Fig.2.

The antenna gain can be measured by the following steps

1. Place the AUT (Antenna Under Test) on the biaxial 3D turntable.
2. The test horn antenna maintains horizontal polarization, and the turntable rotation is controlled by the KSS test system and the value of each angular horizontal polarization of the AUT is read.
3. The test horn antenna maintains vertical polarization, and the turntable rotation is controlled by the KSS test system and the value of each angular vertical polarization of the AUT is read.
4. The KSS test system compares the obtained test values with the standard antenna to obtain the final gain values.
