

Exhibit: Module Label / Label Location

Change of Identification (47 CFR 2.933) | Bluetooth 6.0 BLE Module | Original Module M/N ISP2454

New FCC ID (this application): 2BEPY-OSA-001

Original module FCC ID (grantee Insight SiP): 2AAQS-ISP2454, granted 11/24/2025

Label content

The module measures 8 x 8 x 1 mm and is too small to bear the FCC ID. In accordance with KDB 784748, the FCC ID is displayed on the end product rather than on the module: the host clamshell case carries the statement "Contains FCC ID: 2BEPY-OSA-001" and the same statement appears in the user manual (IFU-012662). The module itself carries only the manufacturer part marking.

"This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation."

Module marking and location

The module bears the manufacturer marking M/N ISP2454 on its top (shielded) surface, shown below. The equipment is physically and electrically identical to the originally certified module; only the FCC ID and label are changed under this Change of Identification.

Module top view showing the manufacturer part marking, M/N ISP2454.
