

[illegible]

1. Project description: The project aims to develop a new software application for managing customer data and sales performance. The application will be developed using Python and Django framework. The project is divided into three main phases: Requirements Gathering, Development, and Testing. The timeline for the project is 12 weeks. 2. Objectives: The main objectives of the project are to create a user-friendly interface for managing customer data, to implement a robust security system, and to ensure the application is scalable and maintainable. 3. Scope: The project scope includes the development of a web application with the following features: User authentication, Customer data management, Sales performance tracking, and Reporting tools. 4. Deliverables: The project will deliver a fully functional web application, source code, and documentation. 5. Risks: The main risks identified are potential delays in development, security vulnerabilities, and limited resources. 6. Budget: The estimated budget for the project is \$50,000. 7. Conclusion: This project is a critical initiative for the company to improve its customer relationship management and sales performance. It requires careful planning and execution to ensure success.	1. Project description: The project aims to develop a new software application for managing customer data and sales performance.
