The EUT will only be used with a separation of 20 centimeters or greater between the antenna and the body of the user.

The MPE sample calculation for this exposure is shown below.

$$\bullet \text{ EIRP} = E_{\text{meas}} + 20 \log(d_{\text{Meas}}) - 104.7$$

E=Field strength(dBuV/m), d=measurement distance(m)

$$\bullet \text{ S} = \text{EIRP} / (4 R^2 \pi)$$

$$= 0.000 / (4 \times 20^2 \times \pi)$$

$$= 0.979 \text{ mW/cm}^2$$

- Note

S= Maximum power density(mW/cm²)

EIRP= Equivalent Isotropic Radiated Power(mW)

R= Distance to the center of the radiation of the antenna(20cm)
