

# Radio Exposure Evaluation Report

FCC ID : 2BF3Q-2311  
Equipment : E-UFL module  
Brand Name : WiSA Technologies  
Model Name : 444-2311  
Applicant : WiSA Technologies, Inc.  
15268 NW Greenbrier Parkway  
Beaverton, Oregon 97006  
United States  
Manufacturer : WiSA Technologies, Inc.  
15268 NW Greenbrier Parkway  
Beaverton, Oregon 97006  
United States  
Standard : 47 CFR FCC Part 2 Subpart J, section 2.1091

The product was received on Apr. 09, 2024, and testing was started from Apr. 20, 2024 and completed on Jul. 30, 2024. We, SPORTON INTERNATIONAL INC. Hsinhua Laboratory, would like to declare that the tested sample has been evaluated in accordance with the procedures given in 47 CFR FCC Part 2 Subpart J, section 2.1091 and shown compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC. Hsinhua Laboratory, the test report shall not be reproduced except in full.

Approved by: Jackson Tsai

|             |         |                                                                                                      |               |
|             |         |                                                                                                      |               |
|             |         |                                                                                                      |               |
|             |         |                                                                                                      |               |

## Summary of Test Result

| Report Clause | Ref Std. Clause | Test Items          | Result (PASS/FAIL) | Remark |
|---------------|-----------------|---------------------|--------------------|--------|
| 2             | -               | Exposure evaluation | PASS               | -      |

### Declaration of Conformity:

The test results with all measurement uncertainty excluded are presented in accordance with the regulation limits or requirements declared by manufacturers.

### Comments and Explanations:

None

# 1 General Description

## 1.1 Information

### 1.1.1 EUT General Information

| RF General Information |                       |                           |                                                    |
|------------------------|-----------------------|---------------------------|----------------------------------------------------|
| Evaluation Mode        | Frequency Range (MHz) | Operating Frequency (MHz) | Modulation Type                                    |
| 5GHz WLAN              | 5150-5250             | 5180-5240                 | 802.11a/n: OFDM (BPSK, QPSK, 16QAM, 64QAM)         |
|                        | 5250-5350             | 5260-5320                 | 802.11ac: OFDM (BPSK, QPSK, 16QAM, 64QAM, 256QAM)  |
|                        | 5470-5725             | 5500-5720                 | 802.11ax: OFDMA (BPSK, QPSK, 16QAM, 64QAM, 256QAM) |
|                        | 5725-5850             | 5745-5825                 |                                                    |
|                        | 5850-5895             | 5845-5885                 |                                                    |

### 1.1.2 Antenna Information

| Group | Ant. | Port | Brand      | Model Name    | Antenna Type | Connector   |
|-------|------|------|------------|---------------|--------------|-------------|
| 1     | 1    | 1    | Antenova   | SRF2W012      | PCB          | I-Pex       |
|       | 2    | 2    | Antenova   | SRF2W012      | PCB          | I-Pex       |
| 2     | 3    | 1    | Art Signal | ARTS-RWPM-321 | PCB          | Reverse SMA |
|       | 4    | 2    | Art Signal | ARTS-RWPM-321 | PCB          | Reverse SMA |

| Group | Peak Gain (dBi) |          |                         |                         |         |         |
|-------|-----------------|----------|-------------------------|-------------------------|---------|---------|
|       | 5G              |          |                         |                         |         |         |
|       | U-NII-1         | U-NII-2A | U-NII-2C (5450~5650MHz) | U-NII-2C (5650~5725MHz) | U-NII-3 | U-NII-4 |
| 1     | 4               |          |                         |                         |         |         |
| 2     | 6.37            | 6.37     | 5.94                    | 5.13                    | 5.13    | 5.13    |

| Group | Directional gain (dBi) |          |                         |                         |         |         |
|-------|------------------------|----------|-------------------------|-------------------------|---------|---------|
|       | 5G                     |          |                         |                         |         |         |
|       | U-NII-1                | U-NII-2A | U-NII-2C (5450~5650MHz) | U-NII-2C (5650~5725MHz) | U-NII-3 | U-NII-4 |
| 1     | 4                      |          |                         |                         |         |         |
| 2     | 5.37                   | 5.37     | 4.94                    | 4.13                    | 4.13    | 4.13    |

Note 1: Directional gain = Peak gain - Cable loss.

Note 2: Cable loss = 1dB.

Note 3: EUT can match with above antennas for using. Higher gain antenna was used to perform the worst configuration and result of that was recorded as the final test result.

**For 5GHz function:**

For IEEE 802.11 a/n/ac/ax mode (1TX/2RX)

Ant. 1 (port 1) & Ant. 2 (port 2) or Ant. 3 (port 1) & Ant. 4 (port 2) could receive simultaneously.

Ant. 2 (port 2) , Ant. 4 (port 2) can be used as transmitting antenna.

## 1.2 Applicable Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- ♦ 47 CFR FCC Part 2 Subpart J, section 2.1091
- ♦ KDB 447498 D04 Interim General RF Exposure Guidance v01

The following reference test guidance is not within the scope of accreditation of TAF.

- ♦ 47 CFR Part 1.1307
- ♦ 47 CFR Part 1.1310

## 2.3 Multiple RF Sources Exposure

| Refer Std.           | Exemption Exposure Thresholds (TL)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| §1.1307(b)(3)(ii)(A) | The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| §1.1307(b)(3)(ii)(B) | $\sum_{i=1}^a \frac{P_i}{P_{th,i}} + \sum_{j=1}^b \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^c \frac{Evaluated_k}{ExposureLimit_k} \leq 1$ <p>a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(B) of this section for P , including existing exempt transmitters and those being added.</p> <p>b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(C) of this section for Threshold ERP, including existing exempt transmitters and those being added.</p> <p>c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.</p> <p>P<sub>i</sub> = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source i at a distance between 0.5 cm and 40 cm (inclusive).</p> <p>P<sub>th,i</sub> = the exemption threshold power ( P<sub>th</sub> ) according to paragraph §1.1307(b)(3)(i)(B) of this section for fixed, mobile, or portable RF source i.</p> <p>ERP<sub>j</sub> = the ERP of fixed, mobile, or portable RF source j.</p> <p>ERP<sub>th,j</sub> = exemption threshold ERP for fixed, mobile, or portable RF source j, at a distance of at least λ/2π according to the applicable formula of paragraph §1.1307(b)(3)(i)(C) of this section.</p> <p>Evaluated<sub>k</sub> = the maximum reported SAR or MPE of fixed, mobile, or portable RF source k either in the device or at the transmitter site from an existing evaluation at the location of exposure.</p> <p>Evaluated Limit<sub>k</sub> = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source k, as applicable from § 1.1310 of this chapter.</p> |

## 2.4 MPE Calculation Method

The MPE was calculated at 20 cm to show compliance with the power density limit.  
The following formula was used to calculate the Power Density:

$$E \text{ (V/m)} = \frac{\sqrt{30 \times P \times G}}{d} \qquad \text{Power Density: } Pd \text{ (W/m}^2\text{)} = \frac{E^2}{377}$$

**E** = Electric field (V/m)

**P** = RF output power (W)

**G** = EUT Antenna numeric gain (numeric)

**d** = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = \frac{30 \times P \times G}{377 \times d^2}$$

## 2.5 Calculated Result and Limit

### Exposure Environment: General Population / Uncontrolled Exposure

| Mode      | DG (dBi) | Power (dBm) | ERP (dBm) | Tolerance (dB) | Tune-up ERP (mW) | Distance (cm) | Option | TL ERP (mW) | TL Ratio |
