7. Installation

Thank you for your purchasing GMAIPOP F19 Dash Cam. Before starting installation, please watch videos and note the tips attached.

Front Camera Install video:

Scan the QR Code by the mobile phone to check the installation video of **FRONT** camera in YouTube

Or

Contact us to achieve the video

7.1 Install Front Camera

Step 1. Install electrosatic film.

Clean the Windshield Glass by
the clean accessories in the box

IMPORTANT NOTES

*It's very importance to
clean it.
If the glass it dirty, the
bracket will be easily
to drop*

Please peal off the cover marked “①”*in Red*, then install
on the glass

After Install the film on the cleaned Windshield glass, then peel off the other cover marked “②” in green.

Step 2. Install the brakcet.

There are 1pc Suction Brakcet and 1pc 3M sticky bracket in the box, choose any one of them

2.2-2. Install and press Sticky bracket on the *electrostatic film* very tightly

⚠ IMPORTANT NOTES

Please do not remove or take it off after installation.

IMPORTANT NOTES

- Please Make sure the installation position is cleaned correctly.
- Please Make sure the suction film is removed and the suction cup is clean.
- Please make sure the suction bracket is locked tightly
If not, the suction bracket will easily drop during video recording

Step 3. Connect the car charger to camera's USB port and Wire the cable according to the overall wiring diagram below

Wiring Method A

Wiring Method B

! Please use the original car charger provided to avoid fault or incompatibility.

Step 4. Install the car charger's cable according to the photos below.

a. hide the cable into to the top panel as the photo

b. Break the side panel slightly and insert the cable, please be careful if there is a **airbag**

c. then insert the cable to the door's sealing tape.

d. insert the cable according to the door's sealing tape.

e. insert the cable according to the door's sealing tape.

f. connect the car charger to Cigarette lighter

IMPORTANT NOTES

If your vehicle has side curtain airbags please be very careful when running any cables along your vehicle windows. Ensure you are not running Cable past any of the airbags as this can prevent the airbags from deploying

Please make sure the cigarette lighter is clean for connection.

Please check the car charger's red indicator whether is on.

8.Important Functions

Collision Sensing

G-Sensor is a 3-axis impact gravitational sensor which is designed to detect physical and gravitational forces on the camera.

When detect significant/sudden shock& crash is detected The current loop cycle length of video file will be locked which will NOT be deleted by loop cycle function.

Tips for G-Sensor:

- a.** when G-sensor is on, please check and format the SD card every 7days. In case of the SD card full or important files missed.
- b.** The sensitivity “LOW” is enough for daliy usage.
- c.** When setting “Middle/ High”, Many useless Locked files will make the SD card full easliy

Loop Recording

Loop Recording allows camera to continuously record loop by loop so it can delete the oldest video files automatically when the memory card becomes full so you don't have to manually delete them. This feature will split each video files to appropriate length based on your selection.

Time-lapse Video

Time Lapse video mode allows you to capture specific images per second at a much lower rate.

Time-lapse video is an auto function, If it's on:
When car engine is started, the dash cam will record normal videos. When vehicle engine is off, the camera will STOP the continuous video recording and it will go into the time-lapse 1fps recording mode automatically.

IMPORTANT NOTES

a. Time-Lapse recording is triggered by the GMAIPO Hardwire Kit only. If car charger is used, the time-lapse video will NOT be triggered

b. if Time-lapse video is necessary for you, please order the GMAIPO Hardwire kit by ASIN: **B0CC9JXNVD**

FCC WARNING

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To maintain compliance with FCC's RF Exposure guidelines, This equipment should be installed and operated with minimum 20cm distance between the radiator and your body: Use only the supplied antenna.
