Antenna Test Report

Test Unit: Shenzhen Aihui Technology Co. , Ltd.			
Materials	Coaxial line+Copper pipes		
Antenna form	PIFA	Polarization mode	Linear
Application scenario	Wifi /BT		
Working band	2400Mhz-2500Mhz	VSWR	≤2

Power	Max: 2W	Impedance	50Ω
dBi	≥		
Test Equipment	HPE5071C、Shielding Room、3D automatic turntable		
Antenna Description:: 1. Grounding processing and picture description: no 2. Need to change the motherboard to match: no ● Test voltage: 3.6V, check the antenna contact is good before testing. ● The RF cable of the integrated tester is kept in a natural state and can not be curled. Specification:test the specified power level, all indicators must conform to the specifications.

2. Test Fixture
3. Antenna matching circuit
4. S11 test
5. Antenna passive efficiency and gain
6. Darkroom test equipment and data
7. Schematic diagram of antenna assembly
8. Antenna environment handling
9. Antenna mass production index
10. Structural drawing

1.Project Image

The final verification antenna performance prototype in our company for at least one year, easy to analyze and solve the problem of antenna mass production, to ensure the quality of antenna shipment

2.Test Fixture

Objective: to test the passive parameters of antenna as accurately as possible. Making Method: the handset is made of a 50 ohm coaxial cable, one end of which is connected to the test point of the back end of the matching circuit of the handset motherboard (front end of the RF test hole) , and the other end is connected to the SMA joint. The diagram is as follows:

3、Antenna matching circuit

Modify

E01	E02	E03
No	No	No

Note: The match is unmodified.

4.S11 test

4.0 4.0s11 test method description of test equipment: Network Analyzer (E5071C) test method: a 50 ohm CABLE is used to export from the instrument test port. The SMA connector for connecting the handset is calibrated using a calibration piece, record the echo loss and standing wave ratio corresponding to the relevant frequency points. The test schematic is as follows:

5.Darkroom test equipment and data

6.Test Equipment

Test system: shielded darkroom

The temperature was $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$ and the humidity was $50\% \pm 15\%$

Test equipment: when testing passive data, use the Network analyzer AGILENTE5071C to test active data, use the omnibus CMW500

nce and
Shenzhen

7.Active antenna test data

WIFI Test Data:		
WIFI: 2.4G		
Frequency (MHZ)	Efficiency (%)	Gain (dbi)
2400	53.44	1.32
2410	52.52	1.44
2420	59.41	1.65
2430	57.66	1.48
2440	58.16	1.58
2450	52.30	1.63
2460	54.71	1.25
2470	58.41	1.14
2480	52.65	1.28
2490	57.41	1.41
2500	58.41	1.05

2.4G

6.The panel matches the change schematic

WIFI天线

7. Antenna environment handling

装配天线时，此处尽量不要压在主板下

The original environment, we do not do processing

8.Antenna mass production index

When the antenna is mass-produced, the standing wave ratio is taken as the mass-produced test standard.

Based on the differences of the project itself, the following criteria are given:

Frequency	Standard for volume production
2400 MHZ -2500MHZ	VSWR (Mass Production performance) & LT; VSWR(recognition performance) 0.5
