Description of Test Item

The EUT is a wireless gateway with Bluetooth Low Energy and LTE-M wireless interfaces.

The EUT uses LTE-M modem to communicate with internet and BLE to communicate with locking devices.

The LTE-M modem is a Quectel BG95-M3 modem (FCC ID: XMR201910BG95M3, IC: 10224A-2019BG95M3)

All tests were performed on a BGW/A2 with powered from a regulated DC Power Supply.

1.2 Normal test condition

Temperature:	20 - 24 °C
Relative humidity:	20 - 50 %
Normal test voltage:	12 V DC (DC Supply Voltage)

The values are the limit registered during the test period.

1.3 Test Engineers

1.4 Antenna Requirement

Does the EUT have detachable antenna(s)?	☒ YES	☐ NO
If detachable, is the antenna connector non-standard?	☒ YES	☐ NO
The BLE transceiver have a RP-SMA connector, the LTE module has a standard SMA connector.		

Requirement: FCC 15.203, 15.204

1.5 EUT Operating Modes

Description of operating modes	The BLE transceiver was programmed using the Nordic Semiconductor nRF test software from a computer. The computer was connected to the USB-C interface when programming. The LTE module was controlled by the CMW500 radiocommunications tester and was set to transmit with maximum output power on a channel in the center of each of the supported frequency bands. The LTE module supports only LTE, GSM or WCDMA is not supported.
--------------------------------	--

1.6 Comments

The measurements were performed with the EUT powered by 12 V DC from a regulated power supply. It was checked that power variations between 85% of 12V DC and 115% of 24V DC, did not have any influence on the measurements.

6.1 Test Site Radiated Emission

This test setup is used for all radiated emissions tests. For frequencies below 30 MHz the measuring distance is 10m, for all other frequencies it is 3m or 1m. Emissions above 1 GHz are measured with a Spectrum Analyzer and Horn Antenna. For measurements above 18 GHz the test receiver is moved inside the anechoic chamber and located next to the antenna to minimize the cable loss. All measurements at 1GHz and above were performed with turntable height 1.5m and with the ground plane covered by absorbers. A pre-amplifier is used for all measurements above 30 MHz, and High-Pass or Band-Pass filter is used for all harmonics.
