

Operation Manual

Thank You

For choosing the Rokform 3-in-1 Foldable Wireless Charging Stand. Please read this manual carefully and keep it safe for future use.

1. MagSafe® Phone Charger
2. Wireless Ear Bud Charger
3. Smart Watch Charger
4. USB-C Port
5. LED Indicator

Connecting Charger To Power

Connect one end of a USB type-C cable to the port of the Foldable Wireless Charging Stand, and the other end to a power adapter. For optimal performance, we recommend using a power adapter with a rating of 65W or higher and premium USB-C cables like the one included.

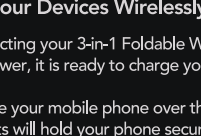

Charge Your Devices Wirelessly

After connecting your 3-in-1 Foldable Wireless Charging Stand to power, it is ready to charge your devices.

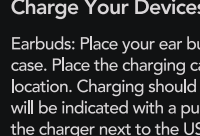

Phone: Place your mobile phone over the charging area. The magnets will hold your phone securely in place while charging. Your charger works with and without MagSafe cases. This includes all Rokform cases, including the Slim case, and Rugged & Crystal cases with the non-magnetic plug installed.

If you are using a Rokform case, ensure the magnetic Roklock plug is removed. Attempting to charge with a magnetic plug installed in your Rokform case can damage the charger and may cause your phone to overheat.

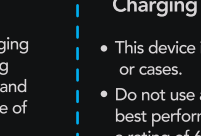

Charge Your Devices Wirelessly

Earbuds: Place your ear buds into their wireless charging case. Place the charging case on the ear bud charging location. Charging should begin after a few seconds and will be indicated with a pulsing green light on the side of the charger next to the USB-C port.

Charge Your Devices Wirelessly

Smart watch: Unfold the watch charger from the back of the stand. Place your smart watch flat on the charging area to begin charging. Charging should begin after a few seconds and will be indicated with a pulsing green light on the side of the charger next to the USB-C port.

Charging Precautions

- This device is not compatible with non MagSafe® phones or cases.
- Do not use an adapter with a rating of less than 25W. For best performance, we recommend using an adapter with a rating of 65W or higher.
- Wireless charging is more convenient, but limited by the current wireless charging technology. The charging speed will be slower than wired charging.
- High temperatures will decrease charging speed and limit power, which is a physical phenomena for all chargers.
- It is recommended to use it below 25°C/77°F for better performances.
- Both the phone case and the distance between phone and charger will affect charging speed, which is decreased by the thickness of the case.
- The LED indicator on the side of the charger pulses green when charging. If the LED indicator pulses blue and green, a malfunction is detected. To fix this, remove the phone and ensure there are no external magnets present – MagSafe® cases ARE compatible.
