

RF Test Report

Project Number: 5172414**Proposal:** SUW-202312005705**Report Number:** 5172414EMC04**Revision Level:** 2**Client:** Accu-Time Systems, Inc.**Equipment Under Test:** RFID Reader**Model:** AccuProx**FCC ID:** 2BFYF-ACCUPROX**IC ID:** 4577A- ACCUPROX**Applicable Standards:** FCC Part 15 Subpart C, § 15.209

ANSI C63.10: 2013

RSS-210, Issue 10, December 2019

RSS-GEN Issue 5

Report issued on: 05 August 2024**Report revised on:** 13 September 2024**Test Result:** Compliant

FOR THE SCOPE OF ACCREDITATION UNDER CERTIFICATE NUMBER: 3212.01

This report must not be used by the client to claim product certification, approval, or endorsement by A2LA, NIST, or any agency of the Federal Government.

Prepared by:
Daniel Alvarez, RF/EMC Sr. Staff Engineer**Reviewed by:**
Martin Taylor, Project Engineer

Remarks: This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. And for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/terms-e-document.aspx>.

Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for a maximum of 30 days only.

1 Summary of Test Results

Test Description	Test Specification	Test Result
Antenna Requirement	47 CFR Part 15, Subpart C 15.203 RSS-GEN Section 8.3	Compliant
Field strength of fundamental	47 CFR Part 15, Subpart C 15.209 ANSI C63.10:2013, Section 6.3	Compliant
Radiated Spurious Emissions	47 CFR Part 15, Subpart C 15.209 ANSI C63.10:2013, Section 6.2 through 6.5	Compliant
Conducted Emissions	47 CFR Part 15, Subpart C 15.207 ANSI C63.10:2013, Section 6.2	Compliant

1.1 Modifications Required for Compliance

None

2 General Information

2.1 Client Information

Name: Accu-Time Systems, Inc.
Address: 20-B International Drive,
City, State, Zip, Country: South Windsor, CN 06095

2.2 Test Laboratory

Name: SGS North America, Inc.
Address: 620 Old Peachtree Road NW, Suite 100
City, State, Zip, Country: Suwanee, GA 30024, USA

Accrediting Body: A2LA
Type of lab: Testing Laboratory
Certificate Number: 3212.01
ISED CAB Identifier: US0186
FCC Designation Number: US1126

2.3 General Information of EUT

Product Marketing Name (PMN): AccuProx
Model Number (HVIN): 90-1934-01
Firmware Version ID (FVIN): 4025-511-11
Serial Number: 243423206772
FCC ID: 2BFYF-ACCUPROX
ISED ID: 4577A-ACCUPROX

Frequency Range: 125 kHz
Data Modes: RFID – ASK
Antenna: Wire Wound - Loop antenna*

Rated Voltage: +5 VDC
Test Voltage: +5 VDC

Sample Received Date: 15 April 2024
Dates of testing: 24 April 2024 through 21 June 2024.

**Data was not measured; therefore, the lab is not responsible for accuracy. Data was obtained via customer, specification sheet, previous regulatory filing, or other means.*

2.4 Operating Modes and Conditions

During emissions testing, the EUT was powered and set into a test mode to exercise the product transmitter during testing.

2.5 EUT Connection Block Diagram – Radiated Measurements

2.6 System Configurations

Device reference	Manufacturer	Description	Model Number	Serial Number
A	ATS	RFID Reader	AccuProx	243423206772
B	CUI Inc	External AC Adapter	DSA-24PFS-12CFA	N/A

2.7 Cable List

Cable reference	Port Name	Start	End	Cable Length (m)	Ferrite installed?	Shielded?
1	DC Power Cable	EUT	External AC Adapter	1.8	N	N

3 Antenna Requirement

3.1 Result

Test Description	Test Specification		Test Result
Antenna requirement	FCC 15.203	RSS-GEN S8.3	Compliant

3.2 Requirement

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit permanently attached antenna or of so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

3.3 Conclusion

External Clamp or Direct coupling accessories are glued to the PCB which does not allow the user to disconnect. This meets the antenna requirements for FCC and ISSED.

3.4 Photograph

The photograph of the antenna is shown in a separate exhibit.

4 Field Strength of Fundamental

4.1 Test Result

Test Description	Test Specification		Test Result
Field strength of fundamental	15.209	RSS-210, A.1.2	Compliant
	ANSI C63.10:2013, Section 6.3		

4.2 Test Method

The test data was measured using a Peak detector. Average measurements were made by correcting the peak value with the duty cycle correction factor. The receiver's resolution bandwidth was set to 200 Hz for measurements taken in the 9kHz to 30MHz frequency range and 120kHz for measurements for 30MHz and higher. Measurements were made with the antenna positioned at a 3m distance from the EUT in both the horizontal and vertical planes of polarization. The antenna height varied from 1 m to 4 m and the EUT was rotated 360° to find the maximum emitting point for each frequency. The radiated measurements were recorded and compared to the limits indicated in the table below.

The radiation measurements were performed in X, Y, Z axis positioning.

Calculations: Field Strength = measured value + antenna factor + cable loss – pre-amp factor

Radiated Emissions

4.8 Test Result

Test Description	Basic Standards	Test Result
Radiated Emissions	FCC Part 15, Subpart C, 15.209 RSS-Gen S7.2.5 ANSI C63.10: 2013	Compliant

4.9 Test Method

Exploratory scans were performed over the frequency range as indicated in the tables below using the max hold function and incorporating a Peak detector and using TILE! software. The final test data was measured using a Quasi-Peak detector below 1GHz and a Peak and Average detector above 1GHz. The receivers resolution bandwidth was set to 1kHz for measurements taken below 150kHz, 9kHz for in the 150kHz to 30MHz range, 120 kHz in the 30MHz to 1GHz frequency range, and 1MHz for measurements of 1GHz and higher. For testing below 30MHz, a loop antenna was employed, and peak scans were taken with the loop open towards the EUT (Co-Axial) and with the loop in-line with the EUT (Co-Planar). Above 30MHz, a biconilog antenna was used and measurements were made with the antenna positioned in both the horizontal and vertical planes of polarization. The antenna height was varied from 1 m to 4 m and the EUT was rotated 360° to find the maximum emitting point for each frequency. The radiated measurements were recorded and compared to the limits indicated in the table below.

Radiated emissions limits (testing above 1GHz was not required for this device)

Frequency Range (MHz)	Limits (uV/m) Quasi-Peak or Average	Measurement Distance (m)
0.009-0.490	2400/F(kHz)	300
0.490-1.705	24000/F(kHz)	30
1.705-30.0	30	30
30-88	100	3
88-216	150	3
216-960	200	3
Above 960	500	3

Note: Limits were converted to dBuV/m using the equation $20 \cdot \text{LOG}(x)$. Additionally, for measurements below 30MHz, the limits were adjusted to a distance of 3m using a 40dB/decade correction per §15.31(f)(2)

Example: at 20MHz, the limit is expressed as 30uV/m at 30m

$$20 \cdot \log(30) = 29.5 \text{ dBuV/m}$$

30 to 3 meters is a single decade, so $29.5 + 40 = 69.5 \text{ dBuV/m}$

4.10 Test Site

5 Conducted Emissions

5.1 Test Result

Test Description	Classification	Basic Standard	Test Result
Conducted Emissions	FCC Part 15, Subpart C, 15.207 RSS-Gen S7.2.4 ANSI C63.4:2014	ANSI C63.4	Compliant

5.2 Test Method

With the receiver's Resolution Bandwidth (RBW) set to 9 kHz, exploratory scans were performed over the measuring frequency range (0.15MHz to 30MHz) using a max hold mode incorporating a Peak detector and using the TILE! software. The final test data was measured using a 9kHz RBW in conjunction with a Quasi-Peak detector and Average detector and compared against the limits indicated in the table below.

Frequency Range	Class A Limits (dBμV)	Class B Limits (dBμV)
0.15 to 0.5 MHz	Quasi-Peak 79 / Average 66	Quasi-Peak 66 to 56 / Average 56 to 46
0.5 to 5 MHz	Quasi-Peak 73 / Average 60	Quasi-Peak 56 / Average 46
5 to 30 MHz	Quasi-Peak 73 / Average 60	Quasi-Peak 60 / Average 50

6 Measurement Uncertainty

Measurement uncertainty is not used to adjust the measurements to determine compliance.

Measurement uncertainty values in the table below comply with CISPR 16-4-2.

Parameter	Uncertainty
Conducted emissions	± 0.8 dB
Radiated emissions, 9 kHz to 30 MHz	± 3.5 dB
Radiated emissions, 30 to 200 MHz	± 3.1 dB
Radiated emissions, 200 to 1000 MHz	± 4.6 dB
Radiated emissions, 1 to 18 GHz	± 5.4 dB
Radiated emissions, 18 to 40 GHz	± 4.0 dB
Note: The uncertainties provided in this table represent an expanded uncertainty expressed at the ~95% confidence level using a coverage factor of K=2.
