Remote Controller 7347106.6.2

9233106

**T-MAX ForceView Titan (FVT)
10000LB Winch**

with new Synthetic rope, and fairlead cover

9247106

**T-MAX ForceView Titan (FVT)
13000LB Winch**

with new Synthetic rope, and fairlead cover

T-MAX ForceView Titan
winch include:

- Load Indication System
- LED logo on Control Box
- Electronic Torque Limiter
- Cable control and wireless both available
- New Covered Synthetic Rope
- Aluminum Fairlead and Fairlead Cover

NAME: Remote Controller
MODLE: 7347106.6.2

NEW! T-MAX Force View Titan Winch Remote Controller Features

**Cable Control
Indicator Light**

Wireless Control Indicator Light:
When the light flashing, it indicates the controller need for charging

Winch Load Indicator:
Real time to show the winch load
when use cable control

Wireless control Switch:
Press the wireless control switch 3S,
the wireless control indicator will light
up, control the winch by wireless.
Press the wireless control switch 3S
again, the cable control indicator will
light up and control the winch by cable
connection.

Power In Switch:
Press the power IN switch,
the winch begins to roll in.

Power Out Switch:
Press the power OUT switch,
the winch begins to roll out.

Battery Specification:
Model:18500, 3.7V 1400mA.

Cable Control

Wireless Control

Note :
Cable control, need to connect the
remote controller to the control box
by cable..

Note :
The controller is charging when
cable control connected

T-MAX

NEW! T-MAX Force View Titan Winch Controller Features

Magnetic: Strong neodymium magnets enable remote to be secured to any ferromagnetic material

LED LOGO: Can show the winch power on or power off, also real time to show the winch loading situation.

Control. Box Socket

Connect the remote to the control box by align the five holes. Push plug straight into socket until you feel the push tab engage and lock the plug into the socket. The control box LOGO will light up, indicating the controller is connected.

⚠ WARNING ⚠

NEVER operate winch with less than 10 wraps of Synthetic rope around the drum. The terminal end is to prevent the rope from unraveling, it is **NOT** a load bearing attachment point. Improper installation and/or spooling out to last layer will put a load on the terminal end and the rope will release from the terminal. Always re-spool winch rope under minimum 1000lb. Load before each use.

For more information see owners manual

- Inspect rope before each use
- Protect the rope from coming in contact with sharp or rough objects that may damage, cut or weaken the rope
- Never use rope over a rough surface without chafe protection
- Never shock load winch rope
- Never bend rope around unprotected, sharp corners
- Always use an aluminum hawse fairlead with synthetic ropes
- Never hook rope back onto itself
- Always wash rope after use
- Manufacturer is not responsible for the results of misuse, misapplications, faulty installation, abuse, vehicle condition or modification of the product in any way.

Overload Power off		winch stop working				

IMPORTANT : Load indicator lights will let you know approximately how much load is on your winch based on the continuous winching at high load and always check motor temperature frequently. If motor is too hot to touch, allow to cool before you continue your recovery. It is recommended to re-access your recovery and consider the use of a snatch block when recovery exceeds full load and/or when red over load lights begin to light up.

T-MAX

SAFETY PRECAUTIONS

SAFETY PRECAUTIONS

Improper equipment operation may cause damage to equipment. Observe all safety precautions for personal safety and the safety of others. Failure to comply may cause death or serious personal injury.

Read the following carefully before attempting to operate your winch. Keep the instructions for future reference.

1. DRESS PROPERLY.

- DO NOT wear loose clothing or jewelry. They can be caught in moving parts.
- Wear leather gloves when handling winch cable. Do not handle cable with bare hands as broken wires can cause injuries.
- Non-skid footwear is recommended.

2. KEEP A SAFE DISTANCE.

- Ensure that all persons stand well clear of winch cable and load during winch operation, 1.5 times the cable length recommended. If a cable pulls loose or breaks under load, it can lash back and cause serious personal injury or death.

DO NOT STEP OVER THE CABLE.

- All visitors and onlookers should be kept away from the work area.
- Keep proper footing and balance at all times.

3. DO NOT ABUSE THE CORD.

- Never carry your winch by the cord or yank it to disconnect it from the receptacle.
- Keep cord from heat, oil and sharp edges.

4. DO NOT OVERWORK THE WINCH.

- If the motor becomes uncomfortably hot to touch, stop and let it cool for a few minutes.
- DO NOT maintain power to the winch if the motor stalls.
- DO NOT exceed maximum line pull ratings shown in tables. Shock loads must be avoided.

5. AVOID UNINTENTIONAL OPERATION.

- Winch clutch should be disengaged and the hook secured when not in use and fully engaged when in use.

6. CHECK DAMAGED PARTS.

- Before using, you should check your winch carefully. Any part that is damaged should be properly repaired or replaced by an authorized service center.

7. REPAIR YOUR WINCH.

- When repairing, use only identical replacement parts or it may cause considerable danger for the user.

8. RE-SPOOL THE CABLE.

- Leather gloves must be worn while re-spooling. To re-spool correctly, it is necessary to keep a slight load on the cable. See item 16 of operational warnings section.
- Do not allow the cable to slide through your hand and do not approach the winch too closely.
- Turn off the winch and repeat the procedure until all the cable except for approximately 1 meter (3 feet) is in.
- Disconnect the remote control switch and finish spooling in cable by rotating the drum by hand with clutch disengaged.
- On hidden winches, spool in cable under power but keep hands clear.

T-MAX

OPERATIONAL WARNINGS

OPERATIONAL WARNINGS

Read the following carefully before attempting to operate your winch and keep the instructions for future reference. Smittybilt electric winches are intended for recreational self-recovery usage only.

1. The uneven spooling of cable, while pulling a load, is not a problem, unless there is a cable pile up on one end of the drum. If this happens reverse the winch to relieve the load and move your anchor point further to the center of the vehicle. After the job is done, you can unspool and rewind for a neat lay of the cable.
2. Store the remote control switch inside your vehicle where it will not become damaged, inspect it before you plug it in.
3. When ready to begin spooling in, plug in remote control switch with clutch disengaged, do not engage clutch with motor running.
4. Never connect the hook back to the cable, this causes cable damage. Always use a sling or chain of suitable strength.
5. Observe your winch while winching, if possible while standing at a safe distance. Stop the winching process every meter or so to assure the cable is not pulling up in one corner. Jamming the cable can break your winch.
6. Do not attach tow hook to winch mounting plate, they must be attached to vehicle frame.
7. The use of a snatch block will aid recovery operations by providing a doubling of the winch capacity and a halving of the winching speed, and the means to maintain a direct line pull to the center of the rollers. When double loading during stationary winching, the winch hook should be attached to the chassis of the vehicle.
8. Ensure "D" or bow shackles with adequate load rating are used in conjunction with an approved tree trunk protector to provide a safe anchor point.
9. When extending winch cable, ensure that at least five wraps of cable remain on drum at all times. Failure to do this could result in the cable parting from the drum under load. Serious personal injury or property damage may result.
10. All winches are provided with a red cable marking to identify that 5 cable wraps remain on the winch drum when this mark appears at the rollers (10 wraps for synthetic rope). No recovery should be attempted beyond this marking (wire rope only).
11. Since the greatest pulling power is achieved on the inner most layer of your winch, it is desirable to pull off as much line as you can for heavy pulls (you must leave at least 5 wraps minimum on the drum--red cable). If this is not practical use a snatch block and double line arrangement.
12. Draping a heavy blanket or similar object over the extended winch cable is recommended as it will dampen any back lash should a failure occur.
13. Neat, tight spooling avoids cable binding, which is caused when a load is applied and the cable is pinched between the others. If this happens, alternatively power the winch in and out. Do not attempt to work a bound cable under a load, free by hand.
14. To prevent vehicle rollback, apply blocks behind wheels when vehicles are on an incline.
15. Battery
 - Be sure that the battery is in good condition. Avoid contact with battery acid or other contaminants.
 - Always wear eye protection when working around a battery.
 - Have the engine running when using the winch, to avoid flattening the battery.
16. Winch cable
 - Be sure that the cable is in good condition and is attached properly.
 - Do not use the winch if cable is frayed.
 - Do not move the vehicle to pull a load.
 - Do not replace the cable with a cable of lesser strength.
 - The life of the cable is directly related to the use and care it receives. Following its first and subsequent

T-MAX

WINCH OPERATION

uses, a cable must be wound on to the drum under a load of at least 500lbs (230kgs) or the outer wraps will draw into the inner wraps and severely damage the cable during winching. The first winch use should be a familiarization run while in a relaxed, non recovery situation. Spool out the cable until the red cable mark appears (about 5 wraps on the drum), then rewind the cable on the drum under a load of 500lbs (230kgs) or more. This will slightly tension and stretch the new cable and create a tight cable wrap around the drum. Failure to do so may result in cable damage and reduced cable life.

17. Do not attempt to exceed the pulling limits of this winch.
18. Do not drive your vehicle to assist the winch in any way. Vehicle movement in combination with winch operation may overload the cable, the winch itself or cause damaging shock loads.
19. Shock loads when winching are dangerous! A shock load occurs when an increase force is suddenly applied to the cable. A vehicle rolling back on a slack cable may induce a damaging shock load.
20. The winches shown in this manual are solely for vehicle and boat mounted, non-industrial applications.
21. Do not use winch in hoisting applications due to required hoist safety factors and features.
22. Do not use the winch to lift, support or otherwise transport personnel.

WINCH OPERATION

The best way to get acquainted with how your winch operates is to make a few test runs before you actually need to use it. Plan your test in advance.

Remember you can hear your winch as well as you can see it operate. Get to recognize the sound of a light steady pull, a heavy pull, and sounds caused by load jerking or shifting. Soon you will gain confidence in operating your winch and its use will become second nature to you.

STANDARD OPERATING PROCEDURE

1. Ensure the vehicle is secure by applying the parking brake or chocking the wheels.
2. Pull out the winch cable the desired length and connect to an anchor point. The winch clutch allows rapid uncoiling of the cable for hooking onto the load or anchor point. The shifter tab located on the gear housing of the winch operates the clutch as follows:

The clutch bolt is at "in" position when leaving the factory. You should always operate the winch directly by press "in" or "out" button on the handheld remote cotroller. Also can operate the clutch bolt by internal hexagonal wrench (#8 or T50) as below:

- a. Turn the wrench counterclockwise, clutch "out", Cable may now to be free spooled off the drum.
- b. Turn the wrench clockwise, clutch "in", The winch is now reading for pulling.

Note: Please make sure to rotate 180° during operating the clutch bolt by wrench to avoid gears broken when winch loading.

Note: If feeling struck or laborious when turning the wrench, press the button "in" or "out" to rotate drum to align gear in order to free spool if needed.

Note: It is forbidden to operate the clutch bolt during winch working.
