4. Test results

4.1 TEST OBJECT DATA

This On Board Unit for C-V2X Operation contains various transmitter parts:
C-V2X at 5915 MHz center frequency with 20 MHz channel bandwidth (test report
2023-IN-AT-TICL-E-EX-0-000131-FG-002-Rev3)
Bluetooth/BLE see test report 2023-IN-AT-TICL-E-EX-0-000131-FG-001-Rev2 and
an LTE module FCC-ID: RI7ME910G1W3

Simultaneous transmission operation was checked under the following operating conditions:

1. LTE Band 2 + BLE + C-V2X
2. LTE Band 4 + BLE + C-V2X
3. LTE Band 5 + BLE + C-V2X
4. LTE U.S.Band 8 + BLE + C-V2X
5. LTE Band 12 + BLE + C-V2X
6. LTE Band 13 + BLE + C-V2X
7. LTE Band 25 + BLE + C-V2X
8. LTE Band 26 + BLE + C-V2X
9. LTE Band 66 + BLE + C-V2X
10. LTE Band 85 + BLE + C-V2X
11. All radios receiving (Part 15B measurement)

The LTE transmissions were provoked by a CMW500 set to maximum Duty cycle in LTE CAT-M1 and all transmissions operating at the highest available transmit power. For LTE Transmissions the upload channel was reduced to one resource block to achieve the smallest possible bandwidth giving the highest (worst case) power spectral density.

If no additional emissions due to simultaneous transmission were found, only center channel frequency of the mobile radio frequency band was used for the test. In case of additional emissions found or in case of doubt additional measurements were performed at the corner frequencies of the mobile radio frequency bands.

All measurements were performed with Peak detector, as long as no limit was exceeded.
