Notes

1. Please confirm whether the matching and environmental treatment methods in the report are acceptable to you; this will directly affect the performance of the antenna. If you have any different opinions, please contact us in time;
2. If your company replaces materials, components, updates software, changes environmental processing, etc., please provide the latest status machine to our company to verify the performance in time;
3. If your device needs to be sent to a third party for performance verification, please provide the test machine to our company for testing and verification before sending it for testing ; (because the consistency of the mainboard, environmental treatment, antenna assembly, etc. will affect the antenna performance deviation).
