

FCC RF Exposure

Product Name: Trail Camera

FCC ID: 2BLWP-PH970S

Model(s): PH970S

1. Limits

According to KDB 447498 D01 General RF Exposure Guidance v06 The 1 - g and 10 - g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

$[(\text{max power of channel, including tune - up tolerance, mW})/(\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ for 1 - g SAR and ≤ 7.5 for 10 - g extremity SAR,

Where:

Result = $P/D \cdot \sqrt{F}$

F = the RF channel transmit frequency in GHz

P = Maximum turn - up power in mw

D = Min. test separation distance in mm

2. Test Result of RF Exposure Evaluation

Frequency (MHz)	Output power (dBm)	Tune Up Power (dBm)	Max Tune Up power dBm/mW	Min test separation distance mm	Result	Limit (mW/cm ²)	SAR Test Exclusion
BLE: 2402	3.83	3 ± 1	4/2.51	5	0.778	3.0	Pass
2.4G WIFI: 2437	7.92	7.5 ± 1	8.5/7.08	5	2.211	3.0	Pass
Note: PK Output power = conducted power. Conducted power see the test report HK2410125962-1E/2E, antenna gain = -0.58dBi(BLE), 3.88dBi(BLE) 2.4G WIFI (max) = 2.211 (mW/cm²) BLE (max) = 0.778 (mW/cm²) simultaneously MPE = $0.778 + 2.211 = 2.989$ (mW/cm²)							

Per KDB 447498 D01, when the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine RF Exposure test exclusion. The test exclusion threshold is 2.989 which is ≤ 3 , RF Exposure testing is not required.

Note: Exclusion Thresholds Results = $[(\text{max. power of channel, including tune-up tolerance, mW})/(\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}]$

$f(\text{GHz})$ is the RF channel transmit frequency in GHz

Distance = 5mm
